

CAPABILITIES AND SERVICES

INFORMATION TECHNOLOGY (IT) GOVERNANCE

Sound governance provides the foundation for any organization to achieve visibility into and effectively manage investments in the people, processes, and technology that enable successful mission execution. ESM can help you identify and implement an IT Governance framework that meets your organization's needs. From strategic IT investment management to robust lifecycle and project management practices, let our trained Program Management Professional (PMP)-certified managers and practitioners help you achieve your IT Governance goals.

ENGINEERING & ARCHITECTURE

Whether you're just starting to think about IT modernization or you have a current technical challenge, ESM's team of technical subject matter experts can help you plan for and design the right technical solutions. Our holistic approach incorporates cybersecurity throughout, considers the benefits of cloud technologies, and leverages advances in machine learning and artificial intelligence as appropriate. We'll thoroughly analyze your requirements to deliver secure solutions that maximize your IT investment, enhance efficiency and productivity, and promote interoperability, while encouraging innovation and creativity.

CYBERSECURITY

ESM's cybersecurity professionals stay abreast of the rapidly changing threatscape and adversarial tactics, techniques and procedures that target an organization's entire information environment. Our team provides cybersecurity expertise that can be fully integrated into the system development lifecycle (SecDevOps), as well as 24x7 Security Operations Center (SOC) support for active monitoring, incident handling, and incident response. We can help you implement a FISMA-compliant cybersecurity risk management framework that enables you to make informed risk decisions based on your organizational risk tolerance.

IT SUPPORT SERVICES

For ESM, IT Support Services and Customer Relationship Management (CRM) go hand-in-hand. We leverage ITIL, PMBOK, and agile principles, and employ IT Service Management (ITSM) processes and supporting technologies such as ServiceNow and Remedy. It's our goal to ensure customers have access to the hardware, software, systems and applications they need to do their jobs, and provide insight into the user experience through data analytics to enable proactive customer support and effective service delivery.
