

TAN TIPS

PRE TAN

- Exfoliate from head to toe preferably the day before or the day of your spray tan
- Remove all previous spray tan and dead skin as much as possible
- Try not to apply moisturizer the day of your spray tan as it will interrupt the absorption of the spray tan and act as a barrier to the skin
- Remove all facial makeup prior to your spray tan (mascara is fine)
- Avoid using deodorant before your spray tan if possible as it will create a barrier
- Shave or wax prior to your appointment as hair removal can strip your tan
- If possible try to wear dark, loose clothing to your spray day appointment
- REMEMBER CLEAN SKIN IS THE BEST SKIN

POST TAN

- MOISTURIZE - MOISTURIZE - MOISTURIZE
- Proper moisturizing will extend the life of your tan and prevent even fading
- Do not shower until your spray tan tech provides you with the time to, as our solutions all have different processing times
- Your first shower after your spray tan will be a warm water rinse only. Do not use any bar soap or body/face cleansers as the colour is still processing
- After your shower pat gently on your skin to dry
- When showering off your spray tan you may notice the water colour changing - Please don't panic, this colour is just the bronzer washing off your body
- Avoid swimming and excessive sweating for at least 12 hours and after you have had your first rinse
- Your colour will be developed to its fullest in 24 hours
- Products to avoid: Bar soaps, Mineral oil (baby oil), Alpha Hydroxy Acid (AHA), Hair removal creams, Chlorine and Body scrubs
