Program Overview

The goal of this hybrid three-day conference is to improve healthcare outcomes for women by providing clinically relevant, evidence-based education. A distinguished panel of nationally and internationally recognized experts will present the latest updates in obstetrics, maternal–fetal medicine, prenatal genetics, prenatal ultrasound, fetal echocardiography, and fetal therapy.

Significant advances and innovations have emerged in recent years across these fields. Many of these developments are directly applicable to obstetric providers who care for patients throughout pregnancy, including evolving approaches to genetic and ultrasound screening, as well as risk assessment and management of conditions such as fetal anomalies, preeclampsia, and preterm labor.

This conference is designed to provide both comprehensive updates and hands-on learning experiences that translate directly into clinical care. It aims to equip participants with the knowledge, skills, and confidence to adopt current recommendations, integrate emerging technologies, and apply the latest research and clinical advances in everyday practice

The program includes two focused symposia on **AI in Perinatology** and **Infectious Disease in Pregnancy**, in addition to a comprehensive **Ultrasound and Fetal Echocardiography course**.

Ongoing progress in fetal cardiac and brain imaging, including the integration of artificial intelligence, continues to transform clinical practice.

Topics Detailed in the Agenda Include:

• Obstetrics & Maternal–Fetal Medicine:

Evidence-based lectures on the management of common obstetric conditions, medical complications of pregnancy, and infectious diseases in pregnancy.

• Prenatal Diagnosis & Ultrasound:

Comprehensive sessions spanning first- through third-trimester imaging, from basic in-office OB/GYN scanning to advanced maternal–fetal medicine (MFM) sonography. Includes hands-on ultrasound training and point-of-care imaging, from foundational skills to advanced applications.

• Prenatal Genetics:

Current approaches to genetic screening, diagnostic testing, counseling, and clinical integration.

• Fetal Echocardiography:

Didactic and hands-on training in fetal cardiac imaging, including acquisition and interpretation of standard views.

• Fetal Therapy:

Overview of current and emerging fetal interventions, including indications, patient selection, and clinical outcomes.

Target Audience

This activity is designed for Obstetricians & Gynecologists, Maternal-Fetal Medicine specialists, Radiologists, Family Physicians, and other interested physicians, as well as Residents, Fellows, Students, Nurses, Midwives, Nurse Practitioners, Physician Assistants, Genetic Counselors, Sonographers, Pediatric Cardiologists, and all healthcare professionals involved in the care of pregnant patients.

Educational Objectives

Upon completion of this activity, participants should be able to:

- Summarize evidence-based management of medical and obstetric complications, including labor and delivery care
- Outline fundamental genetic concepts and their application to prenatal care in the outpatient setting
- Incorporate advances in prenatal diagnosis and screening, including molecular testing and ultrasound techniques
- Enhance knowledge of prenatal ultrasound and fetal echocardiography techniques
