

KNOW WHERE YOUR ELECTRICAL PANEL IS LOCATED

Your Electrical Panel is usually located in the garage.

If you lose power to an outlet or an appliance, check the panel box to make sure all breakers are ON. If they are not in the ON position, turn breaker OFF and then ON.

Example of an Electrical

Example of a GFIC Outlet

If this does not resolve the issue, check your GFIC Outlet (Ground Fault Interrupter Circuit) also most likely to be in your garage.

They can also be in your bathroom or kitchen.

Once located, it has two buttons; a TEST and a RESET button.

First press TEST, then RESET.

If a problem still exists, a licensed electrician should be contacted.
