

Study-backed. Tested. Certified.

Indoor environments are at high risk as they are continually exposed to viruses, bacteria, mold, allergens, and other pollutants that can quickly contaminate air and surfaces and stay active and infectious for extended periods of time, risking health and lives.

Our study-backed, tested, certified, and **affordable** germicidal ultraviolet (UV) equipment harnesses the power of UV-C light to kill pathogens or render them harmless. UV is a well-established means of disinfection used to help prevent the spread of infectious diseases.

ZONE360N

UPPER AIR UV SANITIZING SYSTEM

Zone360 Series

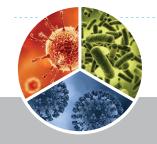

Patent No. US 10 753 626 B2

The Zone360 Series (Zone360, Zone360X, and Zone360N) of upper air UV units offer targeted, upper air UV disinfection. The sleek, modern 2' x 2' units feature 360 degrees of UV air disinfection and are easily installed in any type of ceiling (min. 8 ft. height) to provide continuous air disinfection for 500–1,000 sq. ft. rooms (larger spaces can use multiple units).

Zone360 (100 cfm fan) upper room unit brings high-level UV disinfection to indoor environments including spaces with no HVAC in place. The unit's built-in fan provides immediate airflow and faster disinfection.

Zone360X (100cfm, 200cfm, 530cfm fan) has all the features of the Zone360 plus the option of three fan speeds and a remote control. Created with more fan power as well as flexibility for spaces where occupancy may fluctuate during the day. As occupancy grows, increase fan speed for faster air disinfection and greater airflow.

Zone360N (no fan) has no fan and no air filter, perfect for even more quiet settings and minimal maintenance other than annual UV lamp replacements.

Aerapy UV kills >99.9% of viral and bacterial pathogens, including SARS-CoV-2 (the virus that causes COVID-19)

"Consider using ultraviolet germicidal irradiation (UVGI) as a supplement to help inactivate SARS-CoV-2...

Upper-room UVGI systems can be used to provide air cleaning within occupied spaces..."

CENTERS FOR DISEASE CONTROL AND PREVENTION (CDC), COVID-19 (CORONAVIRUS DISEASE)

How Does It Work?

Short-wavelength UV-C light kills or inactivates pathogens in the air by disrupting their DNA and destroying their cellular function, causing the death of the microorganisms and/or rendering them harmless. The **Zone360 Series** unit disinfects air as it circulates through the unit's tightly controlled 360-degree germicidal UV "kill zone." As the air circulates through the indoor space, each round trip from the lower room to the upper room continues to reduce pathogens.

The **Zone360 Series** upper air UV units help reduce both the air pathogen load and, in combination with normal surface cleaning procedures, help further reduce the surface pathogen load by tackling pathogens in the air before they can settle out on surfaces.

Our proprietary sizing method ensures the correct amount of germicidal UV-C light to achieve the highest possible pathogen kill rate for your particular space. We work with you prior to shipping to calculate the size of your space (from 500-1,000 sq. ft.) and consider additional factors such as air flow, air circulation, and type of environment.

Disinfecting time depends on room size and pathogens targeted for elimination but, within minutes, pathogens can be mitigated from your space.

PRODUCT FEATURES

Fits 2' x 2' or 2' x 4' ceiling grid.

Designed for 500-1,000 sq. ft. rooms.

Meets or exceeds CDC guidelines.

Safe for occupied spaces.

ETL safety tested and certified.

Requires at least 8 ft. ceiling heights and 120V to operate.

Ceiling mounted or suspended by a cable/chain.

Direct wired or directly connected to an HVAC supply duct.

Designed with louvers to collimate UV-C rays and keep them away from occupants, below. Not to be used in rooms with reflective (e.g., metal) walls.

Constructed of stainless steel and non-corrosive aluminum.

Designed, engineered, and manufactured in the USA.

5-year warranty.

>99.9%

Pathogen Reduction in ONE AIR PASS

Independent laboratory testing shows that our UV systems killed more than 99.9% of viral and bacterial pathogens, including SARS-CoV-2 (the virus that causes COVID-19), MRSA, and more in one air pass.
