

Control4

# Premium Automation and Elegant Solutions

Control4 is Snap One's flagship control and automation platform and is exclusively available to authorized Partners. Built for the custom integrator and designed for a premium end-user experience, Control4 automates connected devices across whole projects and orchestrates solutions such as lighting, A/V distribution and high-resolution audio streaming, climate control and window shades, as well as security and surveillance in order to create a highly personalized smart living experience.

Controllers

Control4's CORE and CA Series Controllers are the foundation for any Smart Deployment. All device control, personalized automations, high-res audio streaming, remote access and other cloud-services are orchestrated by the Control4 Controller.

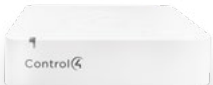

CORE Series Controllers

- Multi-core processor for device control and automated experiences
- 4K OnScreen Menu via HDMI, hi-res multi-zonal audio streaming by Ryff
- Bundles available with CORE lite + Halo or + SR260 remotes
- OvrC Pro enabled

CA-10 – For the Largest and Most Demanding Jobs

- Dual, redundant gigabit Ethernet ports, power supplies and cooling fans
- Dual, redundant field-replaceable SSD in mirrored RAID configuration
- OvrC Pro enabled

CA-1 – Getting Started or Expanding Control

- Control for IP, ZigBee & serial devices; option for Z-Wave
- AC or PoE powered
- OvrC Pro enabled

Integrator must be an authorized Control4 dealer to access these products. Visit [control4.com/partners](https://control4.com/partners) to learn more.

Interfaces

Control4 Touchscreens, Halo Remotes, and the Control4 App deliver a powerful and intuitive interface for personalized experiences, device control, media and scene selection. The UI enables customers with single-page controls for multi-zonal audio and MultiDisplay video, and powerful fine-tune controls for parametric EQ, color-capable lighting, and the ability to favorite the rooms, devices, and media customers use most.

T4 Series Touchscreens

- 8" & 10" in-wall or tabletop
- 1920 x 1200 screen resolution
- Dual microphones & larger speakers
- PoE or AC-powered and Wi-Fi

Halo and Halo Touch

- New premium non-touch and touch universal remote controls
- Backlit buttons include dynamic Voice Button for Apple TV and Xfinity
- Extended battery life, better 2.4 and 5GHz Wi-Fi connectivity

SR-260 Remote Control

- Ergonomic, programmable, LED backlit buttons
- Lithium-polymer rechargeable battery with charging station
- Zigbee connected

Smart Lighting

Control4 Smart Lighting replaces “dumb” dimmers and light switches with sleek hard-button interfaces that provide elegant lighting control while responding automatically to desired light levels. Keypads quickly add user controls to any room and can be programmed for media, lighting, or personalized automated experiences.

Lighting Control

- Adaptive Phase, Forward Phase, and 0-10V dimmers
- Switch for motors and non-dimmable loads
- Mechanical switches for 3-and 4-way locations

Keypads

- Keypad, Keypad Dimmer, Fan Speed Controller options with up to 37 possible button configurations
- Programmable RGB LEDs
- Zigbee or RS-485 wired options

Outlets

- Receptacle Switch Outlet, Plug-in Dimmer Outlet, Plug-in Switch Outlet, Outdoor Switch Outlet
- Zigbee controlled and acts as a repeater

Doorbells and Door Stations

Give your customers complete visibility of their property with our video Doorbells and Door Stations. With stunning HD, immediate notifications, and the ability to communicate with visitors, these devices deliver valuable peace of mind.

Chime Video Doorbell

- 5MP HD camera, 180-degree field view, Night mode, IR LEDs
- Programmable motion and zone events
- Wi-Fi and PoE models

Door Station

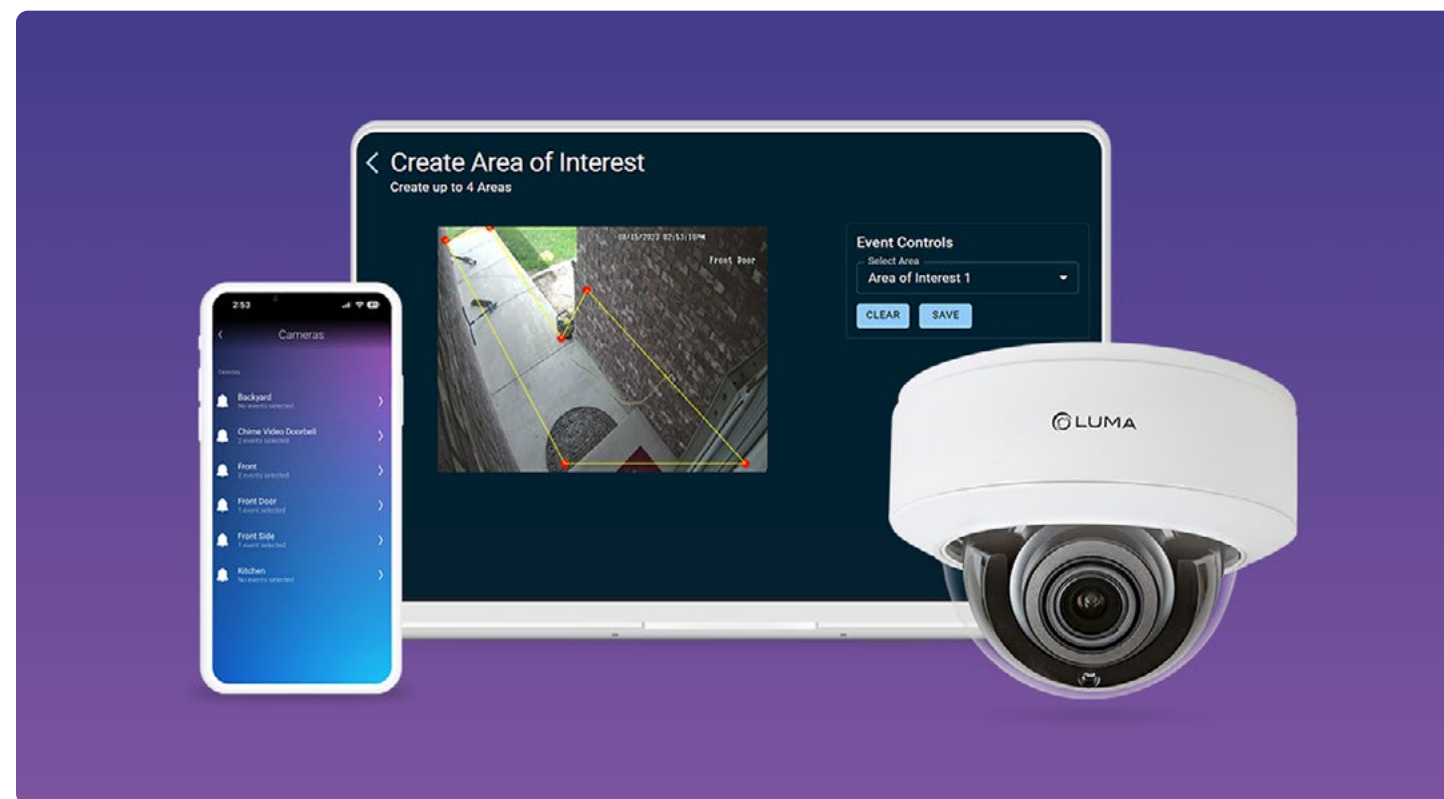

- Flush-mount & surface-mount
- Keypad module, touch pad module, no module options
- Motion detection, call button press, and keypad entry events

Door Station Mini

- Flush-mount & surface-mount
- Motion detection, call button press, and keypad entry events

## Easily Provide Premium AI Features to the Control4 Surveillance Experience

### Simple Installation and Configuration

Luma Insights Subscription adds image recognition and automatic alerts using our new surveillance AI platform, empowered by the Hailo-8 AI processor on the Luma Bridge. Luma Insights is fully functional in 3–4 steps, with auto network configuration, auto device discovery, and auto programmed alerts that allow Partners to quickly add AI functionality with backward compatibility for an impressive feature-add that customers will love.

### Automated Notifications Triggered by AI Monitoring

Luma Insights monitors video streams from Luma X10 and X20 IP cameras, and the Control4 Chime Video Doorbell. Surveillance-triggered events, like a person or vehicle entering an 'area of interest,' captures a snapshot or video clip that is stored in the cloud for 7 days and accessed using Control4 Touchscreens and the Control4 Apps for iOS and Android.

### Review Events in Real Time

Customers will receive immediate push notifications, including a snapshot image of the triggered event. Tapping the notification will deep link the Customer to the camera's live stream or to the video clip. Customers can easily find a specific clip or manage their event notifications, filtering by date range, camera, and event. They can even mute notifications, pin favorite clips or share them with others.

## Lighting the Way Forward

Increase comfort and peace of mind with Lutron. With a comprehensive lineup of keypads, dimmers, plug-in modules, wallplates, and sensors – all controlled with a main repeater, you can create a personalized lighting solution your customers will love.

### Radio RA3

RadioRA 3 brings a modern light bar design to a full range of connected residential products – switches, keypads, and capacitive touch dimmers. The enhanced functionality and new aesthetic of RA 3 make it easier to add the perfect lighting solutions matched to your customer's needs. Powered by PoE, the RadioRA 3 processor optimizes RF coverage by making centralized, receptacle-free installation possible.

Lutron's RA2 Select line is a robust, professional solution that gives you the best of both worlds! It's easy to set up like the Caséta line, but also provides an extensive lineup of premium dimmers and switches that are protected. And OvrC remote management lets you configure, manage, and troubleshoot Lutron OvrC-enabled RA2 Select products. With the Lutron RA2 Select Main Repeater, you can configure up to 100 wireless devices to give your customers the ultimate setup.

### RA2 Select

### Lutron Caséta

The Lutron Caséta line is an entry-level solution that lets you easily get into custom smart home lighting. Plus, it's very user-friendly, so your customers can control, create scenes, and schedule their home lighting needs with ease – all without needing smart bulbs! And with the Caséta Smart Bridge, you can connect up to 75 Lutron devices.
