

Love Won Society Programs Using Zim

Benefactors

Part 1 of 4: Overview

There are five distinct programs. All can be participated in separately or with each other. The RSS forms the basis (foundation) of all programs.

- 1) Revenue Sharing Solutions (RSS)
- 2) Community Assistance Centers (CAC)
- 3) National Real Estate Listing Service (NRELS)
- 4) National Economic Stabilization and Financial Assistance Program (NES & FAP)
- 5) International Commodity Clearing Houses. (ICCH)

FINANCIAL:

Revenue Sharing Solutions (RSS) (LWS Document #1)

The RSS program introduces a way to put money into the hands of perhaps millions of people. That basic structure is the use of an internet platform where money is downloaded in to a person's account at 10 cents per minute, 24 hours per day, 365 days per year, for the foreseeable future. That works out to be over \$1,000 per week.

LOCAL ADVOCATE (or DIRECTOR):

Community Assistance Centers (CAC) (LWS Document #2)

The CAC structure represents the boots on the ground advocates for a given community. It is the Sister program to the RSS program in that the CAC is established and financed by the Zim Benefactor who starts an RSS program. The CAC is an organized structure of Directors who are charged with getting funds into the local community for infrastructure and businesses so that every responsible person in the community is financially viable. It is organized into local geographical communities within cities, counties, and states.

HOUSING:

National Real Estate Listing Service (NRELS) (LWS Document #3)

The Listing Service is designed to stabilize Real Estate Markets and ensure homeowners a profit in their Real Estate holdings. This service eliminates the risk of foreclosures completely by augmenting income using the RSS platform. Contracting Zim Benefactors would set up their own Real Estate Brokers and agents to effectuate the buying and selling process. The listing data base is to be organized by State, County, City, and small geographic area searches as well as by other listing information; beds, baths, size, price, etc.

EMPLOYMENT:

National Economic Stabilization and Financial Assistance Program

(NES and FAP) See LWS Document # 4 for details

The **NES and FAP** program is designed to ensure that each person in the Economy is financially viable with income to sustain their living standards. This program introduces the Employment Contract Shares used to sustain the work force when large sums of money are introduced into the local economy. This program in large part will be administered

by Directors in the **CAC** on a local basis. Larger corporate manufacturing firms will be contacted by trained professionals employed by Love Won Industries (LWI). Using this program Love Won Industries will contract with producers and manufacturers to PRE-Purchase their commodity and distribute it through existing distribution channels at prices we will control. This will assure each participant in the economy remains financially viable. Love Won Industries will act as a buffer to ensure prices remain stable and predictable without a profit incentive for LWI. Our excess quarterly funds will be used as performance bonds to establish credibility to the program. Each Zim Benefactor may participate at their own level of comfort in program #4 and #5. We do welcome the participation but understand that most will not want to go beyond the first three programs.

GRASS ROOTS:

International Commodity Clearing Houses. (ICCH) (LWS Document #5)

The ICCH is designed to possibly be the largest organization in the world. The structure will be organized into commodity clearing houses all over the world connected by a large computer network to accommodate the movement of commodities throughout the world. Clearing houses will be organized by individually designated commodities with transportation and shipment to where the commodities are needed. The **NES and FAP** program will stand as the basis of this program and will be organized on a nation by nation structure of clearing houses.

Note: we do not see Matter Replicators taking over food production. While it may help out in areas in short supply of food, the social nature of dining with each other will never be replaced by a machine.
