

## **COMMUNITY BUILDING Project CB#101**

1. Creative Centers in a Mall like setting with interior courtyards for gardeners
  - a. Seniors/ Retirees that were these types of people at one time, great knowledge can be shared/taught by them.
  - b. Provide community facilities that are free for children, teens, and adults to learn how to paint, draw, weave, carve, potter, sculp, knit, crochet, woodworking, etc.
  - c. Facilities will also include music and all instruments will be provided along with instruction and loving guidance.
  - d. Each Creative Center will have store fronts so artists can sell during the week; employees hired to man the store while artists can create employment contracts.
  - e. Garden will be set up in the middle of the Mall where gardeners will be able to grow, educate and sell/barter their products.
  - f. Furniture restoration. Restore the old into new!
  - g. This Creative Center will replace big box stores that are currently taking up space in Malls. I want to give the little person a bigger opportunity to sell their art, plants, flowers, music to local shoppers and not have to rely on the weather being nice and only on weekends a few times a year and hope the wind doesn't make their tent a sail. This can be done globally
  - h. Use the CAC for employment contracts.
  - i. These Creative Centers will also focus on the children who have been rescued and will require future access and development for love and support.

## **Community Activity Centers CB#102**

### **Proper structures for Philipsburg After School Program.**

#### **Need:**

The island has an amazing after school program for the families that are less fortunate, for decades due to one dedicated man. He has made the best of the situation by helping the kids the best he can with little to no funds. He has a dedicated full time job and full time at his passion. Hurricane Irma really messed up the physical buildings. The kids have to be substandard metal containers with no AC. All materials are what are volunteered or what Mr. Burnett takes out of his pocket. He needs to have improvements on his space and some new equipment for his after school program kids.

Mr. Burnett needs more volunteers to come on a regular basis to work with the kids, especially the mentally challenged and those with learning disabilities.

**Solution:**

To replace the damaged container buildings, add lots of shelving to organize donations, purchase needed items and add AC for the hotter months. To replace the computers in the program with used computers that can be donated from other places that are getting upgrades and we need a person to do that work. The children need to have consistent relationships in the programming therefore we want to hire two part-time people to assist the Volunteer manager that runs the program. During their break time the children are allowed to play sport, therefore we would like to purchase equipment for baseball, soccer and basketball. Requesting past students that have graduated to come and volunteer some hours each month and get their input about program improvements.

**Outcome:**

Mr. Burnett will have help with the after school programming which he has been running for at least 20 years all on his own. This assistance of 2 part-time assistants and materials will give him a break to also take a little down time. With the new support the program will not shut down if for any reason Mr. Burnett is not able to be there for the kids. We can also find assistance with other youth that have graduated from the programs of the past and know the importance of going somewhere where they felt like they belonged. The more organized the program is the more efficiently it can run and the more successful it can be for assisting the kids in a nurturing environment therefore creating trust between the staff and the kids.

**Arts Center - Hands On**

**Need:**

The island of Sint Maarten is in need of an Arts Center for Children and Adults. The basic household income is considerably smaller than most countries. The aftermath of the pandemic has made the situation much dire where many are left looking for jobs in order to support their children. Children are left to their own devices, whether it be cooped up in a room or in the streets. A center of Arts will provide a space for children and adults to become familiar with the very essence of themselves through art. Many families cannot afford leisure activities to immerse their kids in, nor have adults been given a chance to discover the benefits of a creative outlet. There is a need to break the unspoken rule of all work and no play.

**Solutions:**

Our goal is to shift the overall societal mindset from constant work to a reality where the

amount of work is equal to the amount of rest and play one engages in daily. An Arts center would be a building with several rooms that would allow the community to engage in the arts of all forms from art to dance to theater to music. Each type of art would contain creative supplies to support each activity. The community would be prompted to explore their creative side in various mediums: dancing, acting, playing instruments, producing music, painting, arts and crafts, mosaics, embroidery, etc. Teachers and volunteers can arrange scheduled classes exploring the medium of their expertise. The goal would be to allow anyone interested to participate for little to no cost.

**Outcome:**

An arts center would help our community spend more time in a flow state where creative expression allows greater well-being. It will greatly facilitate the expulsion of built up/ negative energy that transmutes into beautiful and free creation which will seep into their overall well-being. Society trains our people in a very logical manner, and there is a need to shift some of the energy from the logical, overworked left brain thinking to exploring the wonders of the creative right brain. Our people will have a chance to express themselves and transmute some heaviness of their lives into a moment of inner expression. This will generate some more positivity and motivation into a neglected community.

**Bridging the Technology Gap for Students and Community**

**Need:**

Sint Maarten is backward and antiquated in technology data collection and daily usage in government, schools, hospitals, etc. As the island is finally approaching mandatory updating for digitalization of government infrastructure offices and websites to provide online access to all of their services there is a second wave of panic coming. A large majority of residents are not computer savvy, never owning a computer or even being trained in smartphones or in many cases having no internet access. There are underprivileged students that do not have access to technology or understand global trends where basic educational needs are based on technology and the internet. The average elderly person has no experience with it and has a fear of being forced to learn technology.

**Solution:**

Proving the existing community centers (and library satellite locations) with computers, internet service and onsite mentors and volunteers to provide training and assistance for those that are technology challenged. Educate them in: Security awareness, password protection, internet, virus, phishing, online etiquette and how to identify

potential online scammers. To be successful they will need to learn about social media appropriateness, proper research, access to online services like banking, how to apply for government programming through portals and websites. This gives the ability for all people to do research and learn about the new world as the information unfolds. Having programs specifically created for elderly and their caregivers to learn the basics to interact with new online systems.

**Outcome:**

Using community centers will create a safe environment to begin the teachings. As new technology is brought online students have the ability to increase their self-education with online university studies or certifications. The persons that need to apply for government programs can then do it on line with a technology assistant. It removes waiting in lines to get assistance in person with many of the departments. It will create computer literacy for all people equally. It will also give those enjoying technology a way to serve the public in volunteer programs to teach the elderly. As the QFS system comes on line everyone is given the same opportunity to succeed including those that have not had internet or a computer in their home.

**Children's Farming and Education Center**

Giving children hands-on experiencing in raising chickens and other food sources. (still in submission stage)

**Need:**

Children are growing up on the island without seeing enough nature and not truly comprehending where their foods come from, the hard work it takes to run a business, the strength to get t there every day and how to deliver quality products that are a moving part daily to this multiple income producing business of eggs and meat.

**Solution:**

There are already a few farms on the island that want to work with local youth groups and local schools to give the kids hands-on experience on the farm. One program being developed is the adopt a chick program. Each student will receive a small chick and help raise it during my visits during the week. After the chicken gets older and begins to lay eggs the child will take the first egg home.

**Outcome:**

A hands on experience will last a lifetime, the student will see just a little of what goes into raising a real chicken rather than just seeing a blob of meat in the grocery store. They will understand the part of the chick, what it takes to feed it and learn lots of little

details about the chicken's personality. One farm is already prepared to go forward as soon as they have financial assistance to add a few more hen houses.

## **Community Garage**

### **Need:**

The income of most people on the island of Sint Maarten is very low and they can't afford the basics much less purchase expensive equipment to fix their own car or in many cases not able to afford a mechanic so a car can sit for days or even months until enough income comes in to get it going again. Of course without a working car getting around becomes more difficult and affects the ability to create an income, creating a cycle for those who's cars break down often. There are many "under the tree" mechanics here and they are not afraid to work on a car for a neighbor to help them out but many times the needed equipment may not be available. A small by hour fee would be more feasible than the higher fees paid to mechanic shops.

### **Solution:**

Purchasing a property and building a large open air facility with security, where those wanting to learn to care for their own car can go to learn, or teach or just provide help for others by fixing their autos. The facility could be equipped with several sets of basic tools and larger pieces of equipment. There would be stalls set up for the mechanic to work on their car and there would be specific rules on how it would run and each person using it would have to follow the rules of benefits and expectations to use the space, such as specific clean up rules or fees charges for not following the rules. There can be a staff to watch over equipment, cleaning, building and equipment repairs, and in some cases offer some guidance on simple matters.

### **Outcome:**

With a lower cost way to work on cars people would be able to get the autos up and running faster with less outgoing funds. More people could learn how to work on their own cars and take a greater sense of pride in doing it themselves. Due to the fact that these people would not have to make big investments in the tools they would be able to use the otherwise spent funds on other things for their family and the work can be done sooner therefore keeping the auto cared for and increasing the safety for the owners. Another stream of income can be provided on site by selling the most basic items needed such as oil, window washer and lubricants. This would be a great classroom environment for teaching more youth ways to create their profession.

## **Community Outdoor Gym Park**

**Need:**

The island of Sint Maarten is in need of a community outdoor fitness park/gym that is accessible to the public. Modernization of society along with the lockdowns have facilitated a more sedentary lifestyle in our people. During trying times, economically, persons of all ages need a space to engage in fitness and feel comfortable exercising. Gyms in Sint Maarten come at a price and tend to be full. A communal space in nature would be a great way to get people to step out of their homes and devices and be outside enjoying the weather and nature with their community. It would encourage both a community spirit as well as fitness to help relieve stress and keep the body in balance.

**Solutions:**

A community outdoor gym or park for the youth and adults to encourage exercise, movement, muscle strength training for people the ages 16- 70. This can encourage others to momentarily step away from sedentary tendencies and engage in light exercise with easy-to-use public equipment like bars, cycles, ellipticals, and more. These ready to use equipment would be made of weatherproof materials and bolted to the ground. Benches and mats would be incorporated to accommodate the people. It would be gated and have well lit lighting. Such spaces would attract persons of all ages to try the machines and engage in light exercise while connecting with nature. The manager can run training programs for beginners.

**Outcome:**

A community that exercises and engages in fitness activities more often creating a higher level of health. The number one cause of disease is stress. When one exercises, one expels stagnant energy and revitalizes the body. Fitness has a tremendous impact on the well-being of an individual physically, mentally and spiritually. Emotional release that expels during exercise could avoid many scenarios of pent-up aggression that may expel on others during triggering times in their lives. A community park/gym would be a great initiative to get the community to engage in fitness and truly feel the importance of maintaining a healthy lifestyle.

**Creating Sleep and Rest, Giving Homeless a Place to Sleep****Need:**

Since hurricane Irma in 2017 where hundreds if not thousands of people lost their homes and even more live with damages beyond their financial ability to repair people continued to try to make the best of the situation. During the last two years of the pandemic many, many more have lost their homes because they could not afford to pay rent after businesses closed and jobs were lost. Many people, even some with kids, are sleeping in their cars at night because they have no homes. These are good people that

were put into a totally unexpected situation out of their control. All people should have a safe, healthy place to lay their head at night to rest themselves and their children. The government has not been helpful in assisting the homeless on the island.

**Solution:**

We would like to take several closed businesses that have many rooms, like old offices and make them into temporary sleeping quarters for those in need. Specifically single parents will be the first recipients. Converting old school, office buildings, old medical offices or damaged hotels into sleeping quarters for singles and small families.

Preferable group kitchens or food truck deliveries for prepared foods to assist. All adults living in this situation would have training programs to attend to educate them on getting back on their feet and would also include work programs to retrain where needed to assist in changing fields or training. Training would address mental, physical, emotional and spiritual programs to help clients to attain their goals.

**Outcome:**

Placing families into safe and healthy environments will assist them to relax and allow them to create a plan that is more fair and realistic without judgment. Giving them a freedom to decide how they want to move forward with raising their families without desperation, but which direction they want to go and where they may feel called to go. As this peace is present in the parent it will also affect the children. They can create their own structure and plan with the assistance of several coaches. We will provide career coaching, financial coaching and emotional counseling through brother and sister programs. Eventually the families will be able to move into a home with a sense of security and empowerment. This will assist the multi-generational despair of the past.

**Customer Service and Island Tourism Training**

**Need:**

Sint Maarten is a place to visit and has a lot to offer. There are many tourist attractions and the need and opportunity for high quality tour guides is consistent. One of the outstanding issues for our tour guides is that they only know small portions of the island, history or stories of the culture that lives on the island. As a tour guide for a small island it is important to be able to represent the island appropriately by telling the visitors the truth and making quality recommendations for the guest, not trying to ensure the pocket of the tour guide is filled. Most of our guides don't necessarily know their information correctly and because each man is out for himself there is a cut throat attitude too often which leaves a bad impression with the visitors.

**Solution:**

Open a center free training program for teaching tourism guides the basics of Sint

Maarten. The topics to cover are the obvious ones such as; customer service training, the island history and cultures but also include how to do more than just talk. Tour guides need to understand some of the basis of pricing, contracts with hotels and cruise lines, cross referencing to other tour guides, build a network of tour guides, truthful and consistent information to refer to other guides when a guest is looking for something specific, be able to understand and create appropriate pricing rather than undercutting a fellow guide, teaching the guide to be able to negotiate the proper pricing when working with the cruise lines and the hotels, Proper vendors payments.

**Outcome:**

We all want to be a part of something bigger and be recognized for our contribution. This program would benefit the island as a whole and increase the number of quality guides available and the reputation of the island would increase for happy, trustworthy tour guides, and networks of referral, teamwork. It would create a consistency and be a working organization that would work directly with the department of tourism, the chamber of commerce and the port authority. As changes happen on the island the network of tourism guides can be kept in the loop and continue to give the most accurate information and be updated for change in law or new business and restaurants openings or tourist attractions.

**Dutch Quarter Outdoor Sports Field**

**Need:**

In the poorest areas of the island there are no places for kids to go to play outdoor sports and have running activities. In most areas, specifically the males, are spending time on motorcycles, lots of accidents and even deaths. We need them off the street and learning teamwork and relationship building. Our past field was taken down because of road repairs and never replaced several years ago. It appears that the youth are not a priority.

**Solution:**

We need to build outdoor activities fields to provide cricket, basketball, tennis, track, give the kids the opportunity to learn a variety of sports and encourage coaching training. Fields could also assist with opening the Special Olympics which is much needed on the island. We would need the majority of the sports equipment for the sports, a shed to keep the sports equipment and maintenance equipment and a security system, including a high fence. There would need to be parking for those driving from other areas of the island to participate.

**Outcome:**

Creating an outdoor sports field can get more kids off the street, can teach teamwork, good sportsmanship and even get the youth involved with coaching sports. Older youth could teach the younger ones. This will provide opportunities to those with natural abilities to potentially go on to play at a higher level. Both players and coaches can be professional trained and we can begin to have leagues for each sport. There are more than one district that would benefit from having this type of Outdoor sports facilities.

**Helping Hands Technology Centers****Need:**

Sint Maarten is behind the times when it comes to MultiMedia and using it for public venues. It is also true that a good percentage of people on the island have no computers nor do they wish to own one. They want to do these things the old fashioned way. That being said, the ways of the world are changing and each person will need to know a little at least to get started in the new quantum financial systems and to move through life more smoothly for the future changes.

**Solution:**

Through each district a media center will be added for easy access, education on “how to” of the various programs and forms that are needed to become at least able to be self-sufficient in the basics, be able training for all ages and to allow the younger generation to train the older in the processes.

**Outcome:**

As the island of Sint Maarten becomes more automated all people are affected. It will become mandatory for at least a few basics to be learned to maintain financial services accounts. Taking students that are excited about becoming mentors to an older generation challenged with technology can create a win-win situation for many people involved in the programming.

**Herbal Remedies Farm****Need:**

The numbers of the people of Sint Maarten that are sick and aging quickly have grown immensely in the last 2 decades because they are being talked out of using the old fashion remedies that their ancestors used and being put on chemicals by the medical community. Many of the Doctors here berate their clients using herbs and natural cures and tell them if they do use the prescriptions they will no longer see them. Pharmacies

try to treat simple colds with drugs. They are profit driven, not health driven. Our people need their culture and education back that came from their ancestors.

**Solution:**

We need a large scale herbal farm to own the business of reeducating the locals and visitors of the natural remedies of the lands. An acre of land with a small greenhouse and up to 50 raised beds for growing medicinal and preventative healing herbs. Multiple levels of classes taught by the elders of our island and newer teachers can hold classes. We can regain the knowledge of our health care from the ground, tree and bush. All ages educational programs including throughout the school system, creating field trips for hands of fun experiences.

**Outcome:**

The knowledge of knowing simple garden remedies to be healed with no side effects. Educating and treating from our past knowledge from our ancestors to cure common colds, asthma, headaches, bladder infections, skin diseases, blood disorders and a whole lot more. Along with this comes less money spent on healthcare and on easy life remedies. We have many examples to share of those already being helped. We have the educated teachers already available to start the projects. Students will be able to walk their own land and identify what they already have available. They just need the space and the financial kick start.

**History Art Museum and Slave Wall, Hiking Programs**

**Need:**

As the world becomes more open and many more people move to the island of Sint Maarten the life we had decades ago is becoming watered down. The stories are nice but the stories are changing too much. We need to complete the museum that will hold the stories of the past in art work and writings. Many pieces of art hold the hidden treasure of our past. Part of that past is the stories contained in the slave wall, built by slaves hundreds of years ago. Taking a hike on the island and seeing the current beauty is great for our visitors but there is much more to be shared.

**Solution:**

At the bottom of a small piece of land is called Hope Estate. One family lived there for several generations growing and continuing to split the land amongst the generations, selling off a piece at a time. Now there is not much land left, but the stories that are there need to be told and held for the future to understand these people and their humble beginnings remain. There are many pieces of art work already completed sharing the history of the families and how they created an influence on that part of the

island. Their family was part of building the slave wall and honored this history even as the slaves were freed. The trails to the French Side and back have many stories of escape, caravans to safety, the building of the forts and more.

**Outcome:**

Our goal is to build a facility, on the land, that is near the harbor where residents and guests can come to see, hear and learn about the history of the island, walk the land, see the slave walls, read the stories and hike to the trails and learn the stories. It can be a preserve for the history and work with tourism to share the history of the island through land tours and by natives that are happy to share the stories.

**Holistic Poultry Production and Education**

**Need:**

We need self- sustainability on our small island, we need to raise our own produce and meats. Quality farming understands that our customers deserve the best quality organic products. Sint Maarten has a shortage of affordable organic poultry products, (farm fresh, organic, free-range eggs and poultry) which means purchasing from other producers that use growth stimulants, antibiotics or animal by-products. On the Island our eggs and chicken have to be imported and require chillers or cooler to maintain their shelf life with a company whose goal is financial, this poultry is usually reared and processed with commercial product method. emphasis is placed more on volume rather than the taste of the overall taste. The island lacks resources for organic chicken farming.

**Solution:**

We need to supply our residents with start-up family farming where we implement traditional poultry rearing, nature's way. This makes a world of difference in the healthy quality and flavor of our chickens and eggs. We remove high volume, imported chicken where machinery is used to process chickens. Local farming has a low volume environment that enhances the quality of the taste of our birds. In this way of poultry rearing, it is a balanced family tradition. As we know not everyone has the time or desire to raise chickens at home. We will provide education to other people wanting to also provide for their family by hands on methods or participating in the actual daily routine process here on an already working farm.

**Outcome:**

Rather than placing the focus on quantity and ROI, we will focus on health, quality and ensuring our future with local farming professionals. Increase production efficiency by 10% yearly, to develop a sustainable farm business that is able to increase family cash

flow. Even in times of temporary halts on importing due to catastrophic weather and /or a worldwide pandemic, as we've seen, we are prepared and experienced. Providing farming where poultry is fed only with wholesome organic feed and given fresh aloe vera infused water daily. Teaching wholesome family values as all members and members of the community participate in the freshest and humanely raised products. We already have a local family, Itoemba's Farming, committed to providing this to the community.

## **Holistic Self Care Wellness and Education Center**

### **Need:**

Thousands of people are awakening on the island of Sint Maarten, millions all over the world and they are searching for the truth from non judgmental, holistic patriots that can feed them the facts in the ways they can see, hear and feel a knowingness they can trust. The people suffer from processed foods, and then underlying medical issues. The island agriculture is publicly supported but, in private, has been sabotaged for decades. Many people practice dark magic and spend more energy in pulling others down rather than focusing on their own success. Health has to be mental, physical, emotional and spiritual. People are struggling for a safe place to learn the simple truth, and find peace and passion with real teachers of consciousness. Real God truth & passion.

### **Solution:**

The Center staff is already available to teach movement, repairing the body using energy psychology and metaphysics addressing the physical and emotional underlying issues for the highest health, using all forms educational vibrational therapies including what goes into the body with farm to table agriculture to bring healthy foods, enlightenment education with immersion and a large variety of programming, covering body, mind and soul. This is how we change the world from our island. Land has been made available to build several structures to house a holistic wellness clinic, sustainable gardens, hiking trails, eco housing and educational retreat center. We will provide the needed space to train people coming from all over the world with love, and consciousness.

### **Outcome:**

Organic Wellness, Eco-sustainability, 1-1, classroom and group training, holistic coaching and metaphysical counseling. Movement programs include Hiking, Yoga, Tai Chi Gung, and outdoor sports. Therapies include, sound/music, crystal, color therapy, aromatherapy, EFT, metaphysical teaching tools; symbology, numerology, access consciousness, quantum energy, quantum touch, and the 4 elements. all programs are in the realm of energy psychology, energy medicine, movement, teaching teachers and

awakening healers. Certifications in Reiki- all levels, Holistic Life Coaching, Metaphysics. Addressing the needs of PTSD, cancers, diabetes, mental health issues, especially depression, along with all mental, spiritual, emotional and physical needs. Land already available.

## **Household Water Filtration Systems for All Residents**

### **Need:**

Clean water is a problem all over the world and also here on the island of Sint Maarten. Our landfill is packed with plastic bottles and there appears to be very little answers coming soon. Our problem is to get an abundance of clear water to every household no matter what the income. Our government has made it illegal to have a cistern and to catch fresh rain water. Each household has very little option especially if they are not educated in ways around this rule. Yes the corrupt government makes it difficult to get water in any way except to buy bottled or the government owned water plants, and a company called GEBE and then you still need to boil it or put it through a water filtration system before drinking it.

### **Solution:**

A solution is to build and give away water filtration containers to every household that wants one. There would be a storage building where they could be built then deliver them out to the households signing up for a water system. Local youth can be hired and in charge of the program of building, delivering and explaining the systems to the households. This will create a work program that gives back to the community. It is a simple program just needing logistics, materials, education and labor. Along with this program we will assist all landowners with gutters or a water catchment system for their homes or neighborhoods. In future programs we will address building neighborhood cisterns and creating watering systems for community gardens.

### **Outcome:**

The ability to put clean drinking water in every household is imperative. It would accomplish several things. Clean water without leaving your home, water from the tap and put it in the gravity pour system and it does the work for you. More people would find it easier and drink more water leading to less people with dehydration which we know leads to even more medical issues. It will lower the amount of water bottles in the dump drastically. It will relieve the family financially of paying for bottled drinking water and those funds can be used toward something else. The catchments and cisterns would give free water to the residents. It would relieve the burden of being at the whim of the local government owner GEBE company that shuts off water whenever it wants to.

## **International Holistic Retreat Center (s)**

### **Need:**

The last 50 years many of the core values of human beings have been broken down. Family values have been torn apart and the average person can't keep a strong sense of pride for their lifetime. The past truths of natural remedies and how powerful human beings actually are is hidden from them and in many ways cursed by those that supposedly love them and support them. In churches pastors yell at the parishioners and doctors sell drugs instead of health. Human beings need a trusting God based place to learn how to fall in love with themselves and God again. A healthy all inclusive place to be nurtured, trained and practice self love, meditation, prayer and forgiveness. A place to be fed the highest level of food, energy, family values, thought and to stand in their power.

### **Solution:**

Opening a 6 + bedroom facility where families, or students can come for all inclusive retreats to regain their power and rebuild their relationships. A safe environment where all food, drink, education and experiential programming is provided. Enough time to relax, let down the guard, trust and regroup. This facility will be a powerful training center for teaching teachers tools and techniques for going abroad with the teachings. Programs include such things as Certifying Holistic Life Coaches, teaching all levels of Reiki and other energy medicine and energy psychology. Identifying and empowering passion and callings, teaching many topics of metaphysics, falling in love with self and God. The land has already been donated for this project.

### **Outcome:**

This project is for all above programs already in place and with positive results. Once the facility/infrastructure/furnishing is completed we will be up and running immediately. We can fully train 6 to 12 students into holistic teachers/practitioners and life coaches two to three times a month. More bedrooms could house more students. Average teacher training is 10 days. Self love and family programs are 5 to 7 days. Teachers are coached on how to start their own businesses including marketing. Within the first year we can have 144 fully trained teachers into the world teaching. Part of certification is doing wellness consultations on 10 people living under observation with feedback. This also means that free health evaluation can be given to the locals at no cost.

## **Marine Trade Skill Training Center**

**Need:**

The island is short of professionals to work on many problems on the boats on the island of Sint Maarten. Many times it takes weeks or even months to have a problem taken care of or completed. Looking past even the relaxed Caribbean attitude there are not enough people trained to do the work. Therefore people from the outside are brought in, raising the cost of the work to the boat owners. As a boat is down for any length of time it's losing potential income. These small businesses need local trustworthy, qualified mechanics to do repairs. We still have boats damaged in Irma over 4 years ago that need to be repaired. We need mechanical, electrical and hull workers. The majority of people living on the island cannot afford to go abroad for professional training.

**Solution:**

The cost for professional training is too high for the majority of students currently. A Trade Skill center could provide local youths with a solid skill set. Starting classes in Marine Electrician, Marine Mechanics, Part Metallurgy, Machine rebuilding. Internships through Caterpillar, Volvo, and others. Expert trainers can be sent in or students can be sent to other islands to have specialized training. The goal is to open up options for youth and an opportunity to become a professional in a field that they are drawn to. They would complete on the job training as a part of graduating and donate hours back to the center for future classes/students. And the training would focus on jobs already located on the island that have current or expected future shortages.

**Outcome:**

As youth are trained they will begin to "adopt a boat" program to rebuild a boat from beginning to end. Each step has training videos, hands on work and instructors. As each student graduates from the program he or she can stay with the trade skills center to train the next set of students or start working immediately. As we can train more mechanics, if they desire they can become part of a crew with a variety of skills and have the ability to have full time employment. Or they can choose to go to work as a specialist working throughout the islands. Students will also be set up for success, trained in setting up their own business, understanding laws, liabilities and writing contracts. Tropical islands need these professionals to complement tourism on the island.

**Metaphysical Education Wellness Center****Need:**

Too many people here intimidate the masses regularly which has created lots of fears. Most locals have a lack of energetic and spiritual education, The few places that imply

they are enlightened are not. The Politicians, local business people and even many police are corrupt and stop all forms of higher vibrational and natural education. As a 3rd world nation we are already behind on most modern advances and those that are supposed to represent us are more interested in padding their own pockets. We need to stop the blockage and start education.

**Solution:** We need to have a full metaphysical educational facility here that can provide teaching on energy medicine, energy psychology, metaphysical education and spiritual awakening. The center needs to have tools and equipment for teaching all ages. A store of metaphysical items for purchases, crystal books and healing music. Equipment needed such as biofeedback, detoxing machines, cold laser therapy and Scalar products. These ways of practice can assist in lowering health costs and give credit to companies supporting their employees in healthier life.

**Outcome:**

We will need assistance getting through the corruption and red tape. Land is already available for a very discounted price. We may need outside architects and contractors. We will need a facility built with rooms for teaching and therapies. machine to be purchased, cold laser, detoxing, bio-feedback, and Scalar. A starting product supply will be needed but sales will then continue needed restocking. We will need basic furnishing and shelving. We will be teaching teachers and need to supply housing or retreat housing during the training period.

**Mindfulness Programming**

**Need:**

Many of the organizations on the island are lacking in funds, in many cases it is due to many years of hollow promises from the government. In 2017 Hurricane Irma hit, one of the largest hurricanes in history tore up the island, people running for their lives, buildings destroyed, business gone and people unemployed for months, many literally losing everything. We have many counselors and psychologists in many areas but there were not enough professionals to do the job and many have tried to do the work while they struggled through their personal issues. We need a place where we can do group programming with trained group leaders in mindfulness, meditation and breathing exercises for larger groups. The mental health professionals are overworked and backlogged.

**Solution:**

Creating a location, that is safe and can hold up to 50-100 people at a time, open and dedicated 7 days a week to provide low cost- no cost classes on mindfulness for

schools, non-profits, churches, and local businesses The facility could be used for other large group programming, such as learning's coping mechanisms or lessons on mental health topics. In many cases the groups that the programming would be directed at would be the counselors for group homes, children's homes, women's emergency shelters and other facilities that serve the community. We recognize not all effective mental health programs have to be private one-on-ones. But we also recognize that even the mental health staff need support. Tools for dealing with stress management of all kids.

**Outcome:**

This kind of programming can take pressure off of the counselors, and psychologists that are having trouble booking clients. The average wait time can be a month for a first appointment for mental health support, they need to be seen sooner than a month. For the topics that can be delivered in a larger group it can take immense pressure off of the providers and give another educated professional group of teachers, healers and coaches the opportunity to step up and also work from their calling. We have many teachers on this island not working that could fill this role. We also recognize that more men are the ones making more of the calls which means we have a shift in priorities or an awakening. We can be there a lot more quickly to support these changing roles.

**Multi Media and Cultural Events Facility (still to be submitted)**

**Need:**

As the island of Sint Maarten grows and more international visitors come to our small island it is important to have a place that clearly shows the history and culture with the ability to move many people through it daily and to truly show. It needs to be large, needs to be colorful with art, music, sound and truly capture the many generations and many individual cultures of the island. They represent over 100 countries, over 30 languages and extreme diversity in displaying artwork, dance and costumes.

**Solution:**

Purchase several lots of land within walking distance in the capital of Philipsburg with plenty of parking to have full shows representing the diverse cultures of the island. Such as Haitian week will have art displays, cultural dance and song, with native costumes. Next week we have the celebration of Dominica and the organization will have their grand displays and even bring groups in from their country to increase the programing.

**Outcome:**

Rather than becoming a melting pot of cultures each culture is able to take pride in their difference and display and teach the world their unique heritage. The growth of this

program will add to higher numbers for visitors from the other cultures that come to the island for the grand display for their country or cultures programming. This facility can also be used for large music gatherings for local youth bands and other displays of a healthy growing island.

### **Outdoor Open Air Farmers Market**

#### **Need:**

The island of Sint Maarten has the ability to feed itself but the government and big business block many attempts at creating a way for like-minded farmers and growers to work together. This would be an attempt to have participants sell their products or use bartering. Locally made cooked items, smoothies, locally made soaps, lotions and natural products. Finding a space that the government will allow has been nonproductive. Though the government says that are for agriculture they have not provided support in a majority of ways.

#### **Solution:**

Gathering of the island's farmers and growers can provide a very large variety of foods. Different participants can focus on their specialty therefore creating many different choices of fruits, vegetables, herbs and items. There would have to be a good sized piece of land available to hold up to 50 vendors at a time, with a walking area around the tables and parking for participants and visitors purchasing. We currently have several groups that would participate and run the program. We just need the place and infrastructure.

#### **Outcome:**

Local people love buying local food. With neighbors selling items or having the chance to sell one's own product there would be high participation. Confidence would increase in the variety and the quality of what is offered. It would create an interest in more people learning to grow. Classes can be given on growing for newbies and schools for the kids to learn at all ages. Having a localized area and consistency of products would reduce the needs for GMO, pesticide filled food provided a the grocery stores creating a healthier population.

### **Repairing Water Reservoir – Hillside Plantation**

#### **Need:**

Farming is not highly encouraged at this time on Sint Maarten. The government is filled with hollow promises and the people left to figure it out on their own or go without. There was a large 90,000 liter water reservoir that was used on the Hillside Plantation to

water plants that was used by gravity. This tank allowed for many weeks of plants being watered between refilling. It served many levels of plants and trees. 25 years ago hurricane Luis severely damaged the tank and despite many requests the tank still is not repaired.

**Solution:**

The tank that is near the top of the hill in Saint Peters will need to be repaired but it is more than just a tank repair, Due to where it is located an excavator will need to be brought in to clear the land to place the materials. A crane will need to be brought in to lift the materials to the place needed. And of course the materials will need to be purchased and a crew to do the work. The tubing/hoses that was originally in place will need to be replaced to the needed areas of plantings. And of course after it is all done the tank will need to be filled.

**Outcome:**

The Plantation will be able to rebuild the amount of plantings and trees that previously grew. Having gravity removes any problems when the electricity goes out and trying to use hand help watering hoses throughout the property. Once the reservoir is completed several water catchments can be built to guide any rain water to the tank to be used freely, cutting down on the need for truck hauled refilling. This will reduce the funds needed for purchasing water and therefore save on overhead and assist in reducing the costs of goods sold which can then go back to the consumer. This Plantation is used as a class for many of the local schools and interest groups on commercial farming and backyard farming.

**Rebuilding Heart and Family Values (still in submittal stage)**

**Need:**

The Caribbean is a place where many generations have been brought up being trained in living in a world that is over sexualized . The female wording for pregnancy is “giving him a child”. Early pregnancy is nothing usual and the majority of the women are not married and have multiple babies with multiple men. In the majority of cases a single parent family (female) is the norm. These children are being raised not understanding a loving healthy atmosphere.

**Solution:**

Programming at an early age brought into the schools and churches and youth centers that can present the stories, education and even movies that are healthy family values. Focusing on family entertainment, with health and safe programming to get involved in as a family. A reprogramming of different sorts that encourage understanding that sex in

not necessarily love and that the human body is a temple and great thought should go into the respectful and moral choices that are available.

**Outcome:**

Teaching morality to the world is not an easy task but also letting children grow into adults not knowing there are other choices is not acceptable. This healing of the heart, learning the ways of the past generations family values and the strength of the family may be slow but we have to start somewhere and a facility and programming is the first step to changing the next generation of children, grandchildren and beyond. By teaching the old fashioned values of family and how to be supportive and regain what we have lost.

**Satellite Library for School Area**

**Need:**

Sint Maarten is divided into two countries. On the Dutch Side of the island we only have one large library. It is placed in the capitol area where it is very busy, congested and not near the major school district. The schools for the majority of all the children in the St. Peters District. Many children needing to do school work after school must travel to that library, Most will not. There needs to be at least a large satellite library within walking distance from the schools for the children to walk to after school and complete their work. The main library rebuild still suffers from the hurricane Irma damages from 2017. Making Education easier for the children needs to be a priority.

**Solution:**

We have a lot of corruption on our island and getting what is right and fair for this island is not easy.

We need a large satellite library to be specifically for the students of all the local schools and people of the district of Saint Peters, within walking distance. Of course open to all. These kids need to have research and educational materials at hand and not only rely on the internet on getting their homework done. They need to be in a quiet place where their brains can slow down and stay focused. They need a place where there can be tutors available to assist them and actually pick up a reference book and find the information the old fashion way. A large building with plenty of materials, technology and space to spread out.

**Outcome:**

The creation of a library near all the schools will accomplish many things. Students can walk to the library right after the school closes completing homework and studies earlier in the evening. This saves time, money and energy rather than taking a bus downtown to go to the big library and then another bus to go home. Working on projects in a quiet

place provided with all the reference materials they need, the computers for those that do not have what they need at home and printers to help with completing the project all while at the library. It gives students and tutors a place to work without distractions and a quiet place for meetings and preparing for exams in a quiet group environment. A place for intellectual support will benefit our kids.

### **School for Special Needs**

**Need:** The island of Sint Maarten is in dire need of a school for special needs children and adults. For many years students with special needs have been neglected and left to integrate into public, overcrowded schools where their needs are seldom met. Persons with Down syndrome, Autism, Asperger's syndrome, ADHD, dyslexia, dyscalculia, dyspraxia, dysgraphia, and other mental impairments. Special needs children and their parents are left to their own resources when it comes to the schooling and support of their kids. This issue has deeply impacted and delayed the educational growth of these individuals. There is an unequal access to education for all.

#### **Solutions:**

The island Sint. Maarten is lacking the support of children and adults with special needs and require their own school for specialized support. A school of various teachers, psychologists, doctors, and trainees that work as a team to ensure overall well-being of these students are being met. A team that genuinely assesses their difficulties, supports where needed and tracks performance over time. Many persons are of low-income families and access to specialized care is inaccessible to these individuals due to lack of qualified teachers and high costs of special care. This facility would be provided free or affordable to the community.

#### **Outcome:**

A school to support children, adults, and their parents to provide the proper support needed for these individuals to thrive and live higher quality lives. Many of these persons are neglected and when given the chance to explore their capabilities can integrate better into society. This initiative would allow for equal education and support for all. Persons with special needs are no longer left to their own devices. A multidisciplinary team that supports and tracks the schooling and progression of the individual and helps them find jobs to integrate in society.

### **Sint Maarten Drumming Pavilion**

#### **Need:**

The head of our cultural center takes a lot of pride in teaching the kids in the drumming

core to expand past the island and to see what else the world has to offer. He does his part by working with the youth teaching them to be a top notch drumming group good enough to travel to other islands and countries. The group needs a place to practice, their current equipment is aged and in some cases only comes in one size restricting every student from having the ability to learn different pieces.

**Solution:**

Purchasing a property and building a large open-air facility, but protected for bad weather days, where the drumming cores can be used for practices and performances. They need the purchase of new equipment, thereby replacing old equipment and expanding the number of kids that can participate in the drumming program, having a storage area to keep and maintain equipment and uniforms. Parking would need to be added for parents, spectators and performances.

**Outcome:**

The kids can count on consistency and build their skills. The leaders push the kids to be their best in order to have the opportunity to travel and win competitions. They learn the pride of representing their country of Sint Maarten and learn the power of commitment and teamwork. The pavilion can be used by other non-profit youth related groups. The island has 65 cultures and over a dozen languages. These kids must follow directions and work together. They have huge potential.

**Youth Marine Education Trade Center, ages 16 +**

**Need:**

Sint Maarten is known for its water entertainment. People come all over the world to learn scuba diving and learn about ocean life. The island is lacking enough locals to fill the need to teach scuba diving and many people are coming from the US and other places to fill the void. A large minority of the people may carry certifications but are not meeting the high standards we need here on the island. We also have a lot of youth sitting around unemployed that would love to be employed on the water or in the water with the guests. The locals need to be involved but there are no current programs to get them involved and the ones that would be helpful are mostly in the US and very expensive to travel and attend. Kids just can't afford the training.

**Solution:**

We have a 28 year veteran PADI instructor that has a dream of opening a training center for the youth of the island to teach Scuba certification, specifically to become PADI Certified instructors. But the dreams also include; classroom education of adult professional crew for sailing, cruising, snorkeling guides, underwater reef specialist for

protection of waters and underwater life, salvaging downed vessels, underwater clean up, underwater hull cleaning, placing underwater buoys, CPR and emergency first aid skills and certification. There are plenty of empty buildings in the area that can easily be transformed into classroom space and many located very near the water. We will add a dive shop for students to run and teach mechanical and dive equipment repair.

**Outcome:**

This program can get kids off the road and get them involved with creating a profession that can give them a good income and work they can take pride in and many of the skills will be transferable. It will provide a safe teaching environment, and raise the quality of the choice for local boaters to fill the slots for the crew and more diving instructors on the island. Internships can be provided to pave the way to further professional certification and allow for more business startups and due to the high level of certification students can teach on other islands or in other countries. Dive shop students will learn about products related to diving, filling dive tanks, and simple repairs on equipment. We have our eye on a great space.

**Youth Skate Park and Dirt Bike Park**

**Need:**

The majority of the youth on Saint Maarten come from poor single parent families. The funds for entertainment, keeping the kids busy and off the streets are lacking in most families. With lack on entertainment and activities to keep the youth busy many make up their own things to do with includes motor bike acrobatics in traffic. In the showing off and attention getting they shock drivers and we have deaths of these youths on a monthly basis. It is true that many of the youth are frustrated and just trying to finds a way to show some power or aggression. With lack of funds many of these kids cannot afford the bikes or to replace the bikes that are crashed which also unfortunately leads to theft. They need a place to centralize them and keep them safer.

**Solution:**

Opening these parks would give the youth a place to go that would be a much safer, organized, supportive structure to take their talents to a higher level. Bringing in observation stands to watch the youth perform and even compete in the public arena would provide the attention lacking in many of their home lives. Having specific guidelines and rules to follow in an organized way, providing the space for the kids to feel they are strong and empowered would give them the opportunity to decide how far they want to take the skill. We will need land and construction of the parks on a piece of open land. We would need to bring in professionals to teach the kids and train people to work the park and learn the ins and outs of the work.

**Outcome:**

Taking the kids off the street will assist less motorbikes weaving in and out of traffic, which will be a better experience for us all. Youth will have a park to go to that can give them a place to show their skills and get them the attention that many of them crave. As the kids can take pride in their display of feats, their self-confidence will assist them in making better decisions. Many of these fatherless kids can gather attention and approval through their performances. As the park's attention progresses there will be competitions and potentially move the kids toward higher levels of responsibility and training the younger kids coming up in the same communities. Observers can go to the track and cheer their youth on as their skills develop.

**Xue Wang's Performing Art Project [CB#103](#)**

Performing Art has been my lifetime passion. I want to enhance and revitalize the performing arts in Australia. This project includes funding the Sydney Opera House and Enriching performing arts nationwide.

**Funding the Sydney Opera House's renovation to the architect's original plan.**

The Opera house is a national icon in Australia, and it is recognised around the world. Not everyone knows that the full vision of the designer for the Opera House was never fulfilled, primarily due to financial corruption.

There have been a few attempts by the NSW government to complete the remaining work, but the financial cost has prevented this from happening. I believe it is a tragedy for Australia not to complete the Opera House to the original plan. It is my dream to enable this unique world artistic heritage site to be constructed to the architect's original plan and vision and much more to make the Sydney Opera House the most prestigious performing art centre in the world and beyond.

I want to extend the original version of the Opera House by equipping it with luxurious accommodations, self-healing centres for dancers and restaurants.

In addition, renovating the Opera House would be a thank you to this great nation of Australia, which has given me so much and became my adopted home.

I also want to work with the State government of NSW, especially the department of city planning to redesign the scenery surrounding the Sydney Opera House so that this entire area will be full of beauty, high energy and tremendous vibration.

### **Enriching the performing art in Australia**

Performing arts, and particularly ballet, have been my lifetime passion. I understand the need for innate talent and recognise how important it is for the commitment of the individual to become an outstanding ballerina.

The distraction of money often dashes the dreams of aspiring artists. It is my desire to give all performing art professionals in Australia a chance to explore their dreams unimpeded by financial limitations.

By funding the arts through various measures, including direct payments to aspiring individuals and companies and the development of community facilities, the performing arts can flourish.

Changes would be at all levels, from the interested amateur to top, world-class professionals. In the process, Australia will be able to attract the best talent from around the world.

### **Narrative for Pourtal, an Off Grid/Solar Retreat Center C#104**

This permaculture design is for ideally a flat (!) acreage, about 5 – 10 acres, more or less, and is drawn as such. Hopefully there is a creek, springs, pond onsite, and a well with good water, and adequate Sunshine! We are creative with extending any flow through stream designs as appropriate to help irrigate crop areas and Guilds, as in the ancient acequia systems. Sacred Geometry is implemented as much as possible, as in our pathways creating the Flower of Life design.

As you turn off a highway leading onto I AM EARTH Road , you pass through a large arbor of Clematis and Passion flowers. You follow signs to Parking where there is uncovered parking, and covered parking that holds solar panels. RV parking is also here, and a plot of Sunflowers (50 sq ft) greets you, and absorbs your travel weariness!

The name Pourtal refers to what we Pour as a community. First Love, for Nature, Gaia, and all sentient Beings, seen and unseen. Then there is beer, wine, and moonshine, all

made onsite. Not that we are all alcoholics by any means!! Humanity has produced these drinks for eons, and medicinally so. Our beverages are organic, nitrate free, and used in many ways, including sterilizing equipment with alcohol. All leftovers from distillation production goes back into our composting system with worms. Our friends off site give us jars, bottles to reuse. Our distilleries are run by very conscious people, on auspicious days and nights , you know, full moons, new moons, holidays, solstices, equinoxes! And, as in the word Portal, we have a tight Spiritual connection that supports us all living together by communal concepts we each and all hold dear and practice daily. We have a Sweat lodge, and Moon lodge, for healing and supporting our community with birthing and healing , dying support. Hence, That "Portal". We Sing together, mostly around a small evening fire, with drumming.

Water – the main house/building is set up to run gray water back into greenhouse needs, as from showering, ( using onsite made soaps) and vegetable/food prep washing , and clothes/linen washing in the Solar Shed. An ancient way of drying clothes on lines is constructed along the wall of this shed.

All buildings are equipped with guttering systems and cisterns with spigots at the bottoms for hoses to water garden areas, with a \$40 garden hose filter for rainwater to clean it from chemtrail fallout, as needed, mostly Aluminum.

The well (s) are pumped by Solar systems, and water is routed only to the Solar shed to wash clothing, linens, and to the Main House for colonic therapy, food prep, showers, filtered drinking water. And to any other designated field for crops, guilds. Ultimately this main house has Kangen water filtration, and we use no soap for washing clothes, only the 11.5 water. We utilize the 2.5 water for wound healing for humans and animals.

We hold a Water Ceremony every Solstice, Equinox, keeping our relationship with Water in Gratitude as a Community. Onsite inhabitants keep 1-2 gallons of Kangen water in their Hemp Homes at a time, replenished daily.

Soil – The entire land is inoculated with mycelium mixture sprayed prior to any building or planting. We Consciously connect with this Amazing Living Creature to spread in and through us and the land and water we are living with. We co-create our Hive mind, in harmony and unity.

This also acknowledges any toxins that might have unknowingly accumulated in the soil prior to us moving here. We acknowledge our borders with prayer ties on trees, and crystals, giving thanks for being protected here, and honoring our commitment to living here in harmony with Nature. We have invested a year of Holy Observation of all aspects, vectors, of this land and water and wildlife prior to building.

Buildings – Prior to building we do a ceremony stating our intentions and asking permission of the land to live here. Our Appointed Architects help us map out the outline of a 60 ft dome, and a 20'x10' Solar Shed, we begin getting the solar shed built first to power our tools. The solar shed will also house the washer and dryer, and freezers. As much clothes hanging on lines as possible occurs, and we are in the habit of Airing our clothes repeatedly before washing!!

The Main House is a Toroidal energetic concept, built as a U shaped single story, with a 0 shaped grow dome. We have pounded 2 ft long curved shaped varying metal rods shaped like rebar into the ground evenly spaced to encourage the toroidal flow of energy up from Earth and down from Cosmos.

There are many windows, which can be all different sizes as we are sourcing as much free material as possible, and creating our own wooden pieces needed at our sawmill, ie, doors,

flooring, benches, chairs, tables, bowls, utensils, and our own Wood chipper for paths, and mulching, After we have honored the trees we are cutting down for use.

This is a wood framed Hempcrete walls, and ceiling structure, also having sunlight windows.

There are 3 private healing rooms for colonic therapy, acupuncture, massage, chiropractic, naturopathic, etc. There is a composting toilet at the end of the hallway near the door in this area. Opposite, there are 3 – 4 private small bedrooms for clients' use, with another composting toilet at the end of the hallway near the door.

The main doorway is very large , wooden, off a covered porch that has benches. Inside to the right is a large stone walled fireplace constructed to heat the entire house( the stone flue large to bank heat through the cold winters) This also contains a vertical Smoker for racks to smoke meats, fish, with great ventilation. To the right of the door outside is where we stack firewood. We also have a hydraulic log splitter.

When entering the front door, you are looking directly across 20 ft to the Kitchen, the Hearth. All space is creatively utilized to include a wood fired stove, and oven, and a solar powered electric stove/oven, and refrigerators. This kitchen is stainless steel, plenty of sinks for washing freshly harvested veggies, and fruits, granite counters, local wooden cabinets, and many shelved pantries.

To the left of the front entrance are 3 private healing rooms each with a large window overlooking the outer ring of veggies, herbs, flowers, growing in the Hugelkulture surrounding the U shaped home. The floor between the rooms and kitchen is large to

dance on! There are pillows and benches all along the walls, little furniture, and places where guitars are hung and drums are stored. Where appropriate, chair swings are hanging from the rafters.

To the right of the front entrance, are 3- 4 private small bedrooms for clients visiting us for healing retreats. Their other choices of lodging are 4 older parked rvs and tents.

At the ends of hallways right and left are the beautiful composting toilets and showers, with shower water channeled into the grow dome.

Grow Dome – houses tropical plants, plant starts in addition to our outdoor nursery, and 2 outdoor showers for workers to clean up easily, that water is circulated through the growing spaces. Being protected by the U shaped house from winds, it is also warmer here throughout the winter as 3 doorways enter from the house, and the 4<sup>th</sup> leads out to the south, as in a wheelbarrow entrance. The 4 doorways also allow for Snow removal off the grow dome ceiling if needed ! This space can also house closed system aquaponics. Herbs are grown here year round, and this is a refuge for any sensitive plants needing indoor space over winter.

On the design there are 6 Hempcrete homes, 6 sided as in a Hive cell, heated with a small wood stove for winter. These are private, permanent dwellings, wood framed, hempcrete walls, ceilings. We offer Permaculture design courses where students are taught how to build with hempcrete, this is how we get

paid to build more homes, comfortably spaced, with Guilds designed for your growing zone are located in between. We can also use these buildings for private massages, meditation spaces, birthing spaces, and rainy day kid play spaces., yoga, dance, 1 building as a distillery, for beer or wine or moonshine making.

There are 5 composting toilets, 2 in the main house, and 3 on the land. We rotate caring for these outdoor spaces, keeping them clean, beautified, and taking refuse to the 1 of 2 Humanure Evolution plots, curing with worms and annual flowers for 1 year.

There are 10 Guilds for your growing zones in this design. They are multi-layered, containing 1 – 2 fruit trees, shrubs, berries, living mulch, insectaries, mineral accumulators, deer deterrents, nitrogen fixers, pollinator food, flower bulbs, vegetables, ground covers, and mycelium. We obtain soil tests for our larger growing spaces as in the Annual food garden in front, and the Beer and Bread grain garden in the South, and the Vineyard, and Corn/bean/squash field. We practice no-till methods.

Animals - we have efficient, protective Chicken coops and tractors, and some chickens range freely; Rabbit hutches, Guineas, Ducks, Goats, Cows, and Horses, and a simple

Barn. All roofs catching rain!! All their bedding and manure is used in our compost, and we have an agronomist on staff who can test soils, microscopes, etc. We have natural animal doctors onsite, and a butcher for eating beef, chickens, collecting, selling eggs, collecting goat milk making cheese, all part of our Export program. And, we have lots of bees! We demonstrate several ways of beekeeping, and educate about this in our PDC courses.

Exports – Drums, Art, Honey, Beer, PDC courses, Chicken and Duck Eggs, Bread, Jams, Flowers, Healing sessions, Mushrooms, dried, and tinctured and raw to cook, Moonshine, Goat Cheeses, Soap, Medicinal Herbal Tinctures (can use our Moonshine for this). All kinds of Tomato sauces, fermented veggies in quarts, Music, Singing. Dance. Ceremony, and Hempcrete, in the form of hemp 'hurd', for building, and hempcrete blocks. This growing of Hemp for fibers is including membership in the International Industrial Hemp Coalition based out of Texas. I am an active member of this pioneering organization to switch the building industry from tree lumber to Hemp. All buildings on Pourtal lands are intended to be hempcrete, and we teach people how to do this in our Permaculture classes.

Imports - essential oils, set up for all cooking gear, pressure canning, initial jars,bottles, dehydrators, meat/fish smoker; lumber to start building then Sawmill equipment for cutting lumber to cure as we need, Wood chipper, gardening tools, carts on wheels and wheel barrows to haul all our stuff, initial plant starting gear; equipment for healing center (colonics, etc); 20ft grow dome; Windows for main house and all hemp houses, solar shed, Barn. Source of organic Hay, straw., Distillery equipment, Flour grinders, food Processors, Solar panels and batteries. And more I am sure!

Thank you for taking the time to read and ingest my Dream!! Feedback is welcome, especially on stacking systems!

Formation of nature-forest kindergartens, as well as holistic free school systems, youth villages, which are worked out together with the children, are a basis for healthy thinking, feeling, and mindfulness of new generations. I would like to support already worldwide existing, good, holistic thinking private organizations and life village communities in this regard. It is also close to my heart to show mothers and women new perspectives in consciously living and helping each other's generation. Single mothers need caring support. For this purpose I would like to found women's communities, to create a living space for them in a kind of women's home, in which they feel safe and can draw new courage to live, new joy of life with their children.

All this will be carried out together in a large interrelated project.

Here, too, I can use the new plasma technology of the *Keshe Foundation*, especially in organic farming. It is a very valuable help.

<https://keshe.foundation/plasma/food-agriculture>. I would like to cooperate with the *Keshe Foundation*, support them and use the plasma generators in all my projects.

This is my plan to accompany and support people into the Golden Age of Humanity into the world of abundance. Happy, content people have the gift to pass it on to the next in the sense of swarm intelligence, this includes all living beings. Let us look forward to a common, wonderful, light-filled togetherness. I as sovereign and humanitarian am aware of the extent of this task and I carry the responsibility for it with joy.

## **People - Local and Global Aboriginal, Indigenous and Shamanic Support & Growth CB#106**

- Hired Director, Native, Shaman and Indigenous Tribes. Includes Inuits, Aboriginals and other Tribes globally not covered by other LWS'ers.
- Arrange for all to receive RSS, build local Financial Service Centers, CAC's and offer loans and grants for personal, community and business projects.
- Coordinate with Canadian, U.S. and other countries to ensure all tribes in all areas globally where LWS members' are not covering or are not able to complete.
- Ensure large infrastructure projects are undertaken and co-ordinated.
- Indigenous, Native American and Canadian Reboot to bring new technologies, prosperity, opportunities, sovereignty, Quantum Education and dignity to Native Elders, their tribes and communities.

## **KINS DOMAIN ACCORDING TO THE VISION OF ANASTASIA FROM THE RINGING CEDARS OF RUSSIA [CB#107](#)**

Create a space of love consisting of 2 hectares each, for families or individuals willing to settle on the land under the provision that they will work the land to grow their own food, raise their families and bond with the land. The land and house cannot be sold but can be returned to ABC. ABC will buy back the house at current prices.

### **TO PROVIDE THE FOLLOWING UNDER THE NRELS PROGRAM**

Purchase huge tracts of land Subdivide into 2 hectares each Open to families or individuals on first come first serve basis Free to anyone who wants to settle in these lands to make these lands productive. Settlers are responsible for the cost of building their own house from the Trust created in their RSS program.

CAC Center. Each Kins Domain will have a CAC (Community Assistance Center) to provide assistance to settlers as follows:

Registration for an RSS account and creating a housing trust that will be used for subsequent payment for their house. ABC will advance the funds for building the house which will be paid back to ABC by the settler in monthly installments from the settler's RSS account.

THE CAC Center will provide the following facilities for assisting the settlers in the planning of their house. architects for settlers to select their house design landscape designers builders tradesmen vendors (furniture, and others)

ABC will be responsible for all amenities, road works, street lamps, sewages, drains, repair and maintenance of all utilities in public area etc, ABC will also provide the following:

Education Center for Children and Adults for arts and crafts and other learning and creative activities like yoga, meditation, dance, learning how to farm, cooking classes, How to preserve fruits and vegs, etc.... Library Gym with equipment Wellness center with all the latest equipment like med beds etc..... Clubhouse for social and organized activities Pool Playground Co-op for trading, exchange of home produce, veg, , fruit, plants, art and crafts etc Free Shuttle Bus Transport every 12 hour to the main town center and return Veterinary services

## **THE NEW ZEALAND RETURNED SERVICES ASSOCIATION **CB#108****

I established a good working relationship with President of NZ Vietnam and RSA President since 2021.

The near 100,000 member organization has a number of issues concerning health & welfare of its ex-servicemen example: Acquisition of and training in the use of mobile phones to improve communications. .

My plan is to discuss and invite the organization to establish an RSS master account then invite their affiliate organizations / groups and members to do the same. This will provide a great way to use the RSS program to inject added wealth to their organizations and members and fund their projects.

1. Have agreement to meet with RSA Representative / President in early 2023 to discover their current WANTS AND NEEDS with a view to identifying Resources, Financial and Planned projects which require funding.

We have already identified two possible projects to meet and discuss how the LWS action plans and services can benefit their whole organization-namely;

Communicating with members dispersed throughout New Zealand.

Ways to secure and re-purpose land and buildings currently owned / used by the organizations

Provide tangible CAC solutions to enable them to kick-start THEIR projects via

Grants & Loans for resources, equipment etc.

Offer CAC employment contracts - (FREE labour to manage operations easier)

4 Monitor results and Identify OTHER WAYS to ASSIST.

## **All Inclusive Project **CB#109****

With my humanitarian friend we intend to build the Holy City, a task requested of me by God. The purpose of the Holy City we have named Avalon Isles is to be a model city of perfect peace, life giving conditions, joyful opportunity, restfulness for those who are broken from the fight, and a place of creative expression. We will welcome the prophets

who have suffered, the meek, the peacemakers, and the love givers who understand long suffering. Needs will be met here both spiritual and physical, with loving council day or night. There will be wisdom poured out to those souls seeking elevation in consciousness, those seeking to understand energy movement, and those who wish to understand their creator much better. The city is designed to give back, encourage the spirit of entrepreneurship. The city is a model, to encourage souls to live among their own tribes and build communities where you feel loved, appreciated, cared for, and understood because you're among those who uphold your same values and seek to accomplish similar goals. It is also to prepare God's children for the phenomenal future in the new world, where evil doers will no longer be. The city includes the following amenities and will be located near Rockport or Camden Maine. The RV has taken so long our desired property sold so we are unsure of exact coordinates, as we will need many acres of land.

There will be greenhouses for food, marijuana, and plants/flowers, a CAC, a community center with apartments for visitors, a meeting center for humanitarians, and planetary visitors, a financial center, community pools, park, flower gardens, a tiny home section designed for specific demographics of people; the overly weary and spiritually wounded, and short stays for those who just need rest and safety until they are strong enough to make new life plans. The city will also include family homes, an orphanage where one adult tends only three children in private living and can meet up with other children in a central play area. We will have schools of education to develop a souls God given skills, a music stadium with recording studios, a business center for business development and revenue sharing, a firehouse, a security station, a mens clothing store, a women's clothing stores, a children and teen clothing store, a hair and barber salon, a tattoo studio, a home goods store, a craft store, a pet store, a Temple/meditation/spiritual meeting hall, a medical facility with herbal cures, dietary advice, and med beds if available, an RV park, a drive in movie theater, a grocery store, a farmers market, a bakery, a landscape division, and gyms.

We don't have a humanitarian project, humanity is the project. This is just one aspect of one part of my plans. I have no want of the money given by love won, it's all going to preserve God's children. I have bought it with my own funds.

## **The Country-Time Community Theatre Company [CB#110](#)**

The Country-Time Community Theatre company, based in \_\_\_\_\_ (your town), produces a family centered season of theatrical entertainment and provides both educational and visual artistic opportunities for the residents of \_\_\_\_\_ (your community).

There are many wonderful theatre organizations across this country. At the end of the day, the greatest obstacle theatre organizations face is "the lack of funding". There are thousands of individuals unable to work in this field who would love to pursue the profession.

There is a need for education in how to be involved in many aspects of the arts but cannot be achieved unless you are involved in academia. Studies have supported that many people want to be involved at different levels and can offer a plethora of enthusiasm and talent for many opportunities. Our organizations will create those opportunities as well as the needed funding,

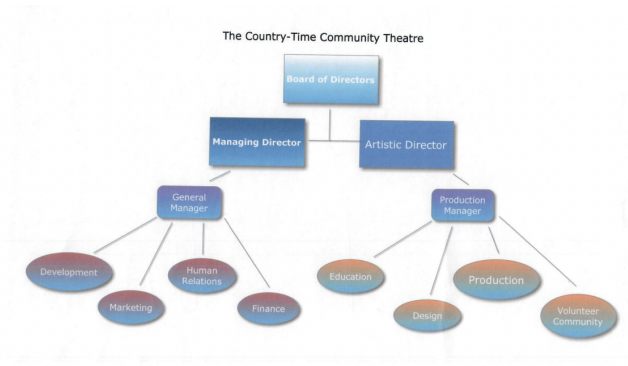

After all theatre staff positions have been addressed for all aspects of the theatre organization and setting the season, opening the various craft support and production shops, we will pursue 8 other objectives:

1. Develop job positions for all areas of the theatre
2. Develop a community of paid contract employees
3. Develop a rewards program for participates/employees
4. Establish a Children's Summer Show Series
5. Teach classes within the community schools & districts
6. Obtain speaking engagements to encourage community participation
7. Co-op with other community functions, events, festivals & productions
8. Support local visual artists, both physically & financially

Not only do local residents have acting opportunities in the seasonal productions, but they will also have opportunities to work hand in hand with professional staff technicians, teachers, actors, and craft professionals. Solicitation for many of the staff positions can be from graduates of local schools & universities, currently employed and unemployed artists, industrial arts groups, veterans and retired individuals and other men, women, & children of the community,

Currently the Country Time Community Theatre is located in a performing arts center in (your town). House amenities can accommodate 570 with ADA accessibilities, a 24 X 46 proscenium stage opening, a 30 Ft. motorized turntable, and a 60 X 60 black box theatre. Both spaces have state of the art in-house lighting, sound, control booth, catwalk, & grid. The lobby houses the ticket booth and refreshment windows, restrooms, motorized & lit truss gallery for hanging artwork and exhibits, with private & public parking in front and back of the theatre. Also included is a complete scenic shop, costume shop, and lighting/sound studio to support the season productions.

The intention of the Country Time Community Theatre is to duplicate this idea in many towns across the state of Texas. We may rent/purchase existing facilities, renovate existing structures or build from scratch.

## The Country-Time Community Theatre Company **CB#111**

Many observers have witnessed the decline and destruction of Western Civilization and grieved the loss of its noble and humane foundations. Twenty-first century western society has lost the value system which once supported its vital structures: education, religion, civic responsibility, and family life. The healthy and positive values which nurtured us in the past must be restored in order for human society to thrive and flourish and maintain the blessings of peace, prosperity and personal liberty for all persons.

The great Eighteenth Century German poet and philosopher, Friedreich Schiller, devoted much care and attention to the consideration of human societal structures. He was passionately devoted to the concept of human freedom and presented this concept from a variety of aspects in most of his works. Moral freedom, intellectual freedom, personal freedom, civic and governmental freedom—all of these found a place in his thought and in his works.

Schiller stands unique among Eighteenth Century thinkers as the one who identified a causal relationship between the exercise of the aesthetic faculty and the presence of exemplary civic and social responsibility. For Schiller the experience of beauty predisposed the human personality to a life of charity and service. Through beauty the spiritual life was nurtured and thus enabled to make choices in favor of moral decency.

My most dearly desired project is the establishment of a graduate level institute to further the development of human societies in three important areas:

1. The integration of existing professions into the larger discipline of public service.
2. The study and examination of the legacy of Western Civilization with this goal: to enable the beneficial accomplishments of Western Civilization to live on into the future, and to provide inspiration and guidance in a new era.
3. Instructions and performance in the musical and visual arts as a means to insure that the appreciation of beauty and the creative experience are widely available to children and adults.

The Schiller Institute will offer graduate degrees in the three areas mentioned above. In each area, the students will come to us with at least one, and possibly two, degrees in their particular subject. The overarching objective is to teach these students how to use the skills and knowledge which they already have in the service of humanity. As a possible extension of our program, our graduates could go out into all areas of the world to establish similar programs designed to support the varied and diverse cultures which exist there. A brief description of the educational content follows.

The Schiller Institute will offer a graduate degree in public service. Students will come to us from a wide variety of recognized fields and, through their own research and the teaching of their professors, learn how their particular fields may be integrated into the discipline of public service and civic responsibility. Many fields would seem particularly suited to this new orientation, such as law, medicine, technology, environmental studies, engineering, sciences, and foreign languages, but almost any field would be suitable for this educational program.

The Schiller Institute will offer a graduate degree in Western Civilization. One might see this program as the theoretical counterpart to the above program in public service. In this program the experienced student would study the historical and foundational principles which determine the very nature of cultures and how those cultures can be enabled to reach the fullest and richest and most noble expression of themselves. Here students already educated in the Humanities would find particularly congenial materials for their own research and scholarship.

The Schiller Institute will offer a graduate degree in the study of music and visual arts. The musicians and artists who study in this program will be especially focused upon the need and means to make these arts more widely available, and more highly respected, among the larger population. Art and music will take their rightful place as servants and benefactors to humankind.

In summary, one might say that these three initiatives speak to three issues: in a practical sense, how can the various professions and academic disciplines help humanity to advance to a higher level of social consciousness; how, grounded in the philosophic tradition, can we use our historic heritage to support that development; finally, how can the spiritually transformative power of the arts assist in this process.

Some thoughts about the practical and physical considerations for this project might be in order.

A mid-twentieth century public school building has been identified as a suitable location for the Schiller Institute in its early stages. This building is beautiful, functional and in an excellent state of preservation and occupies a large tract of land. We are in Waco, Texas, a medium-sized town in Central Texas, equidistant between Dallas and Austin. The predominant cultural influence in our city is a mid-sized private University, Baylor University, which provides a broad range of educational programs to about 20,000 students through the efforts of a world-class faculty.

This project would be an expensive one for several reasons. All students will receive scholarships, which fact will guarantee us an immediate and very large customer base! The professors will be expensive also because of the investment in their own education and the fact that they already have very desirable, high salaried, secure positions. For a few years our institution could function very well with part-time staff, remote education, and retired scholars. A few full-time staff in the beginning would give us the legitimacy which we desire. In the longer view, we would be attractive to young Phds in search of employment.

Our institution will also include education for younger children. We will have a K-12 school system where the values expressed in our mission statement underlie the childhood educational program. The true needs of children will be paramount, not necessarily the perceived needs of the larger society. Some of the Montessori concepts will be available in the lower grades. The children will be educated in the practice of the musical and visual arts from the earliest age.

The community aspect of this project will be emphasized and nurtured. All who participate, along with their families, will have recreational facilities, places for children to play, opportunities for spiritual development, social contact with colleagues, contact with guest scholars and musicians, time to spend with others in the community in the dining hall which will be generously supplied with wonderful culinary offerings. This is where the burning desire to change the world develops—when people share their ideas and enthusiasm with their colleagues in a relaxed and peaceful atmosphere.

In later years, I would expect a move to larger facilities to be necessary. I would like to purchase some land on the Brazos River for a larger campus, not far from the main part of the University. There would be some possibility that we could partner with the University for the use of some of their facilities, especially the library. I would also expect some aspects of this initiative to be replicated in other countries.

## **GARDENED MALLS FOR LOCAL ARTISAN AND TRADESMEN** **STUDIO/GALLERY/CLASSES** [CB#112](#)

At the start of this particular project the properties will ideally be found along the old Route 66 and properties similar in the amount of land, building structure and vicinity to the main road that is most traveled. There are still many old motels that have not been purchased and repurposed. Many new motels have been built by large corporations, displacing the old motels. These new motels do provide low paying jobs for the locals.

We are interested in highlighting local culture. Much of the time you can only find local talent and culture in their bars and at their annual fairs. This project is about the people, the way they live and the communities they live in.

Once a property has been identified as suitable for the project an architect and a contractor will be hired to transform the property into an area that has the appeal to attract families and youth for a peaceful garden experience. It will include small fire pits for small groups to enjoy local musicians play by the fireside. The landscape will give the benefit of being edible. Visitors will be able to visit the galleries, work studios and classes that will be available in each of the former motel rooms.

These rooms will be rented to the local talents for a pittance of what they would be charged at a strip mall. The rooms will be designed to fit the needs of a small manufacturing gallery, recording studio or classes for a trade.

*Rare is the artist that we know their soul*

This is for the people to cultivate their culture and to give them a platform where as they may engage in trade and display their honed talents. The creative process is a healing and soothing process that gives to the witness as much as it gives to the creator.

This will provide a healthy area for all ages to spend their time. These creative-communities will be located on the main street of a community. Travelers will see these beautiful areas and may be inclined to see what it is and what kind of activity it offers. It will be a busy and daily event.

The creative locals and visitors alike give the self a moment to breathe and to spend some time to hear a new song that has never been heard before because and in the name of the new experience. It will give the youth a place to hang out with each other on a weekend or attend a class for glass blowing or to sell their art.

Creative activity has been essential to the healthy development of man-kind and it must be addressed and given a platform from where it flourishes the human soul.

The Artists and Tradesmen will have their own manner of taking payment for goods and services provided. The property will be owned through a trust with the tenants as beneficiary. It will be maintained from the rental proceeds. The local Community Assistance Center (CAC) Director will delegate an assistant to oversee property management.

### **Autonomous Living on Islands [CB#113](#)**

Project:

Enabling autonomous, fulfilling lives on islands previously dependent on the mainland and richer countries. Living in harmony with nature and animals.

In addition, with this project I would also like to restore the financial independence of everyone with the help of the LWS programs. Many islanders live at subsistence level and it has often been limited for them to visit their surrounding island neighbors or even

other countries of this incredibly beautiful earth in a simple way and to gain new experiences.

Purpose:

With this project I would like to contribute to making it possible again for locals and islanders to live completely independent, safe and fulfilled, on and with what the island has to offer. The revival of the former culture, the remembering of the particularities and abilities of the peoples of these islands, the exchange also with surrounding islanders and more distant countries, is possible again for everyone because of the restored balance, the financial freedom and the possibility of an autarkic, fulfilled and healthy life.

The exploitation of nature with its mineral resources, the extinction of the very own culture and the associated servitude, the clearing of huge forest areas, factory farming and other animal suffering, monoculture, food and water shortages, mass tourism, starvation wages, inhumane "living and working", in other words the whole exploitation of mind, body and soul, will be ended with the help of this project.

With this project I would like to contribute further to the fact that the past arbitrariness, with which "richer" over "poorer" is decided, is terminated once for all.

Implementation: (rough structure-worldwide)

- Meeting of individual or worldwide ZIM holders who would like to implement this project also on their islands or islands close to them with the islanders living there. (Prior agreement whether this help is needed or wanted is of course a prerequisite)
- Meeting, agreement and project definition/ CAC planning.
- Integrate LWS programs (RSS, ICCH, ESS, NRELS) into planning.
- Create project accounts in QFS
- Project management/directors, define and team formation.
- Project Implementation

In this project, many areas of life are touched.

For example:

- Employment/income/economy/commerce/networking/infrastructure/owned airline industry/tourism.

- Awareness and reconnection with one's own abilities, culture, and nature and wildlife
- Transformation from lack consciousness to abundance and sovereignty.
- Habitat renewal (reforestation, soil cultivation, water-air purification, home ownership, endemic plants and wildlife...) -New technologies and much more.

As a possible humanitarian of the alliance I see myself as initiator and financier for such large-scale projects.

If this is initiated worldwide, and financed, we can all contribute a great deal to the healing of all. Jobs will be created, people will get more in touch with their nature and their abilities and will learn to deal more mindfulness with themselves and other living beings and life forms in the future.

This idea can be published in the catalog, serve as a suggestion and of course be further developed and supplemented, should it be for the benefit of all.

## **My Presentation & Projects [CB#114](#)**

I was born in Helsinki, Finland. I live in Lempäälä Finland. Its beautiful countryside place near Tampere.

I have been an entrepreneur for almost 17 years, I have had 7 cafes, one second shop and cafe, two cym, and two beauty/health shops. I just finished my last cafe, because it's not good business any more.

### **my projects...**

These LWS programs are very good.

I'm interested in RSS, CAC, ESS and NRELS.

Here in Finland there are lots of people to help.

I would love to help our farmers to grow good food.

RSS is very good, I have been to a few mlm companies and this idea is very good.

I loved to offer this program to every person who wants to receive resources for their life. I'm interested in opening a CAC office too.

We can start here in Tampere and then spread all over the country.

I have a few good friends with whom we can get an amazing team to help people.

PHF is good because we can offer new homes to people who need or want them.

Also we need a healing center for med beds for people and animals, and a wellness center to relax. And also we need staff at those centers.

I have made websites, where I have job offer pages.

I know a few brokers and also a few builders too who live quite near me.

I can also offer jobs to those entrepreneurs who lost their incomes because of this pandemic.

### **for finnish people..**

ESS program is very good. I would love to offer every farmer and local small businesses this programme.

It's a big opportunity for others to get local and fresh food to peoples table. Also services etc.

I also know quite a lot of farmers.

Of course I have to study more, how it works in life, but I'm fast to learn these kinds of things.

I also want to use handworkers to make furniture and so on.

### **for finnish people...**

#### **My projects;**

Healing Centers all over the country with Military med beds for people and animals.

Healing Centers for young and others, drug users and alcoholics and a team to help these people.

Wellness Centers for people to relax and take care of their mental health.

A team to take care of older people who want to live in their own homes.

A team who take care of families who struggle with finances to get good food and their basic needs and more abundance, and get their own home.

We offer help for those who want to take it.

Everybody works with a big heart.

I also want to help small businesses and farmers like I said before.

### **First thing to do.....**

When my funding is accepted, I think that my first steps would be RSS (if it's available) and then I want to give opportunity to my brothers and sister. I also want to give the opportunity to my ex husband.

Then I start to build my team, I think that we can get quite a lot done in a short time. I can make a separate calculation for each project as I would do otherwise, if you wish.

I have had a quite hard time in the last 2.5 years but I think that my vacations come a little bit later because I have so much to help so that they don't fall down.

I don't want myself to fall down either.

For all these reasons I ask for a higher rate for my funding. I'm so thankful for You and

ps. Long story short. I hope that you can understand what I want to say, Im also little bit afraid to speak english and thats why Im not sure can I answer to your questions, but if you can send me questions or If I have to come there, it would be nice if you have translator or we can range something, thank you.

here comes my websites. I make these all the time.

<https://stars4newu.wixsite.com/shiningstar>

## **SWEP Humanitarian and Community Development Programme **CB#115****

For your record, the following link is a twenty minute video up-date, a synopsis, <https://icedrive.net/s/w6wCCRDgQ9SR66B3vG68RRVahb32>, of SWEP Humanitarian and Community Development Programme. Love Won Society is mentioned as one of SWEP's important partners. SWEP emphasis is PARTNERSHIP, in order to make a difference, and so, avoiding unnecessary service delivery duplications.

SWEP Team designed a need-driven inclusive Humanitarian and Community Development Plan, to be realised over a hundred years or more, having periodic adjustments during ensuing years, in the process of challenging, containing and eradicating poverty, and bringing in abundance.

This video up-date is also posted on Love Won Society's Discussion Platform, [Generic Humanitarian and Community Development Programme: - Page 2 - LWS Discussion Forum \(franksenergywellbeing.com\)](#), on which Light had been registered, posting and discussing SWEP proposals since November 2021.

Thanks for the opportunity to share part of LWS Platform, including the RSS.

## **Co-Creation Village Project **CB#116****

Introduction:

Humanity has long been enslaved and oppressed unknowingly, deprived of life and property by the fraudulent control of the judiciary and banks, and by the power of their Satanism (Satanism), carried out through a system of DOG-LATIN grammatical deception and deceit, cunningly engineered by the Vatican and the Code of Justinian. And with the rise of large and global corporations under the control of the Cabal, the traditional Japanese livelihoods and local economies have been forced to collapse. The Great Reset and the New World Order movements have accelerated this process, seeking to control and enslave the people of the world by collapsing the global economy.

We humans must reclaim our Sovereignty as Living Souls and free ourselves from the suffering cycle of servitude. Living Souls are the intangible entities that are the source of the consciousness, will, thoughts, emotions, mind, and spiritual faculties and workings of each and every one of us living human beings. It means the individual being as

sovereign in relation to others. "Sovereignty as a living soul" means to exercise sound conscience, reason, cultural and traditional values, and various needs as human beings (including physiological needs and spiritual or religious needs) to realize real life in a sound way to deal with the various challenges we face in our real lives, especially communal lives. It is the spirit and the right to make decisions and choices, being respected as a free and independent being in relation to others. Sovereignty as a living soul is the inalienable and sacred right inherent in the human person that no one can voluntarily renounce and place himself or herself in a state of slavery.

#### Mission:

Our mission is to aid and promote the spiritual and moral upliftment and wellness of humanity through the creation of learning and sharing communities rooted in harmony with nature and co-creation among people, where those whose thoughts and actions have been controlled by the horrors of the Covid-19 disaster can awaken, reclaim themselves, and depart with a new worldview.

#### Our Belief:

The true purpose of Co-Creation Village Project is to activate and deepen the connections between people. The bonds thus created have the power to enrich people more than money, gold, or treasure. This power is the source of various forms of co-creational life. We believe that sharing wealth with others is the most crucial and principal spirituality of the new era. Co-Creation Village Project is focused on fostering a spirit of sharing abundance and a fundamental transformation of the existing economy. To this end, we will utilize the vast amount of redemption funds.

#### Co-Creation:

In Co-Creation Village Project, the key concept is "living together" or "creating livelihoods together". This concept is abbreviated here as "co-creation". We believe that the shortest way for people, a "lonely crowd" who have become disparate individuals as modern society has progressed and due to the pandemic, to restore a genuine, humane relationship in harmony with nature is to share a common living. In this way, people (villagers) live in a large village (some villagers may stay only a few days a week), collaborating in the production of food crops, sharing, learning, healing, and supporting each other. The work that unfolds there regenerates the "beloved land". Creating these activities and livelihoods-together is called "co-creation" or "co-creation of livelihood". Co-creation is a vital concept that supports and underlies the entire Co-Creation Village Project. Co-Creation Village Project will build and develop communities centered on "co-creation of livelihood". We aim to create Co-Creation Villages in every corner of Japan.

### The Approaches of Co-Creation Village Project:

The Co-Creation Village project can be divided into two main approaches. (1) We develop various humanitarian projects germane to the four action-plan-modules. They are the projects that we do ourselves. (2) Rather than developing diverse projects on our own, (a) we financially support the activities of groups and/or organizations that agree with and resonate with the "humanitarian spirit" we advocate. And (b) we financially support the activities of organizations that have already existed. By doing so, we could use the redemption funds for humanitarian aid to promote more humanitarians' activities and projects than we do on our own, and that we could thus concentrate on the projects and activities within our reach. (2) is the category into which RSS, CAC, ESS, and probably NRELS congruously come.

### Four Action-Plan-Modules

Co-Creation Village Project is characterized by four action-plan-modules: "Co-creation of Livelihoods-Together", "Utilizing Traditional Japanese Wisdoms", "Circulating Heartfelt Money", and "Activating Sovereignty as Living Souls". One completed form of Co-Creation Village Project, which can be done by fully utilizing all four action-plan-modules described below is a school-style (or school-based) compact village for creating humane livelihoods together. Each module is deeply interlaced with one another. The modules are organized in integration with the LWS's Action Plans accordingly. The action plans below are not so much structures as platforms of the project. Some examples of challenges in humanitarian assistance associated with the four action-plan-modules as well as the whole document of the project are presented in our website.

### Creating Livelihoods-Together (CLT):

Through growing crops and food with our own hands, viz., participating in their production, we will create livelihoods-together in which we can experience the joy and gratitude of life. Then, we will create creative communities filled with art in various parts of Japan that are in touch with the earth, rivers, and mountains, etc., that offer healing time and space, and that promote natural healing power.

### Utilizing Traditional Japanese Wisdoms (UTW):

Co-Creation Village, a "place to love", goes hand in hand with Japanese culture, history, and traditions. History, culture, and traditions have not only a "here-and-now", "co-temporal and spatial" relationship, but also a "diachronic and spiritual" relationship from "ancient times" that runs through them. We believe that knowing the roots of this diachronic relationship is essential to living rooted in the land and soil. We believe that it

is precisely in this new age of awakening that we must revive and utilize the richness of the traditional Japanese spirit.

#### Circulating Heartfelt Money (CHM):

The primary purpose of this action-plan-module is to financially support various projects and activities in the local community. The redemption funds per se are a tremendously splendid and abundant system of "Circulating Heartfelt Money". And by spreading the redemption funds among people for humanitarian aid through the Co-Creation Village Project, people's attitudes toward money and the way they live their lives will be transformed. What happens after that depends on how we, the beneficiaries, live? Will we be immersed in a life dependent on redemption money? Or will we take advantage of the benefits and create our own way of life in the new era of the economy? We choose to take the latter path. Why? It is so that we will not "sleep again" on our regained right to truly enrich our own lives. And this is because our consciousness about abundance and happiness is to be fundamentally changed and positively elevated. As a way to do so, the "Knowledge-based Semi-Declining Virtual Currency" invented by Dr. Hideto Tomabechei will be introduced.

#### Activating Sovereignty as Living Souls (ASLS):

We reconstruct education through the life of such communities; we aim to establish and operate institutions of higher education (schools and universities) that nurture intelligence (wisdom), courage (spirit), and humanitarian spirit (love) based on the ideas of "co-creation", "co-creation of livelihoods", and "sovereignty as living souls". A new intellectual framework is needed to survive in the new world and times ahead, based on a proper study of the true history of humanity and the economic systems. To this end, we develop and carry out projects that specialize in training humanitarian aid providers and humanitarian aid activists. "Co-Creation University" (tentative name) mentioned in Co-Creation Village Project falls under this category. We established Co-Creation University as a part of Co-Creation Academy. It will launch a liberal arts faculty. And it will nurture human resources who will practice community and/or town development based on co-creation and who will engage in humanitarian projects and activities through "co-creation living". As part of the Co-Creation Academy, Co-Creation University conducts research and educational activities related to community and/or town development and humanitarian aid, in collaboration with the Academy's research institutes.

#### Closing Remarks

I have been asking myself the question since I was given the Zimbabwe dollar: "What kind of work am I invited to do as a result of the Zimbabwe dollar redemption? And will

the humanitarian projects I want to do truly benefit as many people as possible?" I kept asking myself these questions. One day, I had a vision and began to think, "Perhaps I am entrusted with the responsibility of managing a single faucet of the sacred water source known as the Redemption Fund and regulating the amount of water". Water dripped from that faucet. It will eventually become a stream, a deep river, flowing out of the thirsty land, and around it will grow green and give life to all creatures. I suppose it is my role as Benefactor to decide in which direction and to which flowers that water should flow so that it can reach every corner of this vast land, and in what way to do it. As I began to think this way, I began to feel guided by the thoughts entrusted to him by QFS. As I envision the Co-Creation Village project, I now feel a growing sense in my mind that my will as Benefactor is with the will of the Alliance and the will of QFS as a conscious body.

"Many are the plans in a man's heart, but it is the Lord's purpose that prevails."  
(Proverbs 19: 21)

### **Community Building Project CB#117**

OPEN SPACES ON ALL 4 SIDES OF CITY BLOCKS

Those spaces will be open 24/7 with teams to facilitate all activities. First we have to rent (in the old system) or buy (better!) any real estate that could do the job.

This will be coordinated with LWS' PHF program, in order to not interfere.

Having experienced fablabs, coworking, social innovation, I know that whenever people gather and start doing, making, sharing, their passion, discover new tools, in a free & open source environment, well thought out in advance, with the heart and love, it works and it is amazing!

Those open spaces will be equipped with kitchens, bathrooms, private rooms or studios/apartments (for overnight stays or projects that require you to stay for days or weeks).

Q: Why on all 4 sides of every city block ?

A: The closer to everybody the better !

### **ECO VILLAGE IN THE UK AND GOA, INDIA CB#118**

**Problem:** Many of us have felt and known for a long time that the very system that we are dependent on is dysfunctional, broken and corrupt. It has stolen the dreams of our ancestors, our dreams and if we continue to follow the same path, we threaten the survival of our future generations.

**Solution:** We now have a major part to play in its transformation. Having looked at our complete dependency on the system in every area of our lives, moving forward we need to make pragmatic choices thinking in terms of Cooperation and Collaboration and not competition.

**How:** One way forward is to bring skilled communities together at the grassroots level from Reliance to Resilience and to bring spiritually minded communities under one roof who feel the same love for nature as we do. We are the guardians and protectors of our planet. Our rich heritage needs to be passed onto future generations with pride.

**Team:** I will have 40 different projects under one roof and foresee 150-200 people employed in the first two years.

Permaculture plays an important role in the overall implementation with emphasis on Earth care, People care and Fair share with regular PDC courses run onsite. The forest keeper and the gardener come under this category.

Kitchen team takes care of breakfast and lunch. Country Cafe, mini supermarket, cookery classes will be run by them

Children's Collaborative Centre takes care of hands-on education for children.

In house Carpenter, Electrician and Plumber will run courses for apprenticeships.

Animal Shelter

Sports and Adventure activities

Astronomy and Observatory Centre

These are just a few ideas presented here but I foresee a huge expansion as the community's needs grow organically. This project can be replicated over and over again.

## **COMMUNITY EMPOWERMENT AND INDIVIDUAL DEVELOPMENT**

**CB#119**

Spiritual Healing Retreats

Leveraging current retreats and healing facilities and services, empowering, and remodeling/building them. Workshops, private sessions, events, and training. Trauma release and healing sessions offered from a wide variety of alternative doctors, practitioners, and professionals. Sound healing, Acupuncture, Chiropractic, Massage, Reiki, Yoga, Osteopathy, Gong Bath, Meditation, and all sort of alternative techniques that have been available to us but also the ones that will be available after being hidden for years if they are not available in health centers of each region, for example Med Beds could be installed or brought for weekly sessions in these retreats.

### Embrace your Creativity Centers

Teaching and practicing of all kinds of arts, focused on youth but open to all ages. Music, performing arts, painting, ceramic, etc. We would be leveraging the existing teachers, artists and premises on each location, remodeling as needed, to offer free lessons, workshops, shows and galleries.

### Learn How To Centers

These centers will be teaching all sorts of professions and skills, building, fixing, cooking, fishing, hairdressing, gardening, growing food, etc. Again, we would be using existing teachers, professionals and premises, remodeling as needed.

### Youth Loving Guidance Centers

Here we will help youth to find their own heart and guide them to become the best version of themselves. Private sessions and group workshops, the idea is to help them find their talent and passion so they can develop their skills and divine gift. These centers will work in coordination with the healing retreats, creativity centers and learn how to centers.

### Elder Loving Care Centers

A group of specialized professionals to assist, care and support the elder. Independent but in collaboration with the healing centers and health services, people working on this project will make sure elders live a life full of love and support, helping them in their homes, taking walks together, cooking for them, and just being there for them, so no elder person is alone anymore. Employees of these services can organize events and any other project that is considered beneficial for the elders, funding will be requested to the Director of each area.

All these different centers will be each Director's responsibility, and each director will manage setting up all necessary accounts to administer each center efficiently. These

centers will start in each of my 10 Directors towns and spread nationwide in an organized and structured way.

I have been ready for what is coming all my life, and I am so grateful for this opportunity to serve humanity with all the unconditional love in my heart.

## **EarthSong Community / Village CB#120**

Vision:

To create numerous EarthSong Communities / Living Villages. This is a large project that supports many people living in harmony, wellness and in gratitude to our Creator. The EarthSong Community Village would be nestled into a bushland type space with lots of trees, native animals, such as kangaroos and koalas, birds and natural habitat. I envisage a large community lake, complete with various water activities, with streams flowing throughout the housing estates, parklands and town center for a cleansing and soothing effect.

Included in each community are various housing estates, schools, day care, aged care, medical and dental facilities, hospital, birthing centre, farming, animal sanctuary, places of worship including indigenous sacred ground area, a Town Centre, Community Care Centre and Industrial Centre.

Day visitors are encouraged to visit and become aware of the benefits and advantages of communal and harmonious living. Town Centre to include visitors information center.

Town Centre

This will include eco friendly gift shops, natural therapies, organic baker, healthy grocer, organic fruit and vegetables, arts and crafts, organic café and restaurants; organic/non toxic beauty, spa, hairdresser, barber; post office, financial center, cooking classes, art and craft classes, med bed clinic.

Care Centre

This will include a fire station, resolutions station (police), ambulance, healing center; hospital/dental/medical facilities, pregnancy and birthing facilities, cultural learning and support, lawyers, accountants, fitness/dance, veterinarian, security/self defense classes, real estate office, community projects officer, retreat and workshop coordinator, day care, aged care facilities.

Industrial Centre

Mechanics, engineers, water, sewerage, electrical (free energy), builders and building supplies, dairy, bamboo/hemp clothing manufacturing, alpaca wool production, refuse center, plant and gardening nursery, freeze dried food, publishing/printing/media centre, heirloom seed sowing

### Education

Kindergartens, primary school, high school - all organic, non - toxic, including building materials. 'Eco Earth' Colleges (see separate project) will be part of a central hub connecting many EarthSong Communities/Villages together. 'Eco Earth' Colleges is the umbrella name for a number of colleges/universities that upskill students in careers more aligned to harmonious and happy living and wellbeing. 'Cherish the Children College' is the college for training or upskilling teachers. My vision is to have teaching staff that have been re-trained in the Montessori/Steiner ways of teaching. Only organic, non-toxic foods and products, including hemp paper, will be used in the training colleges.

### Farming

Small scale farming based on permaculture principles on the surrounding land of the village including the growing of hemp and bamboo to be used for building, clothing, packaging products, paper etc. Alpaca and sheep farming for wool products. Cattle for dairy. There will be no animal meat production within the village confines. This is a larger scale farming project.

### Aged Care - called Wisdom Hubs

A sometimes forgotten part of our community. Older residents have a wealth of knowledge and information that can be passed down through the generations. This is how it was done in past times, and I feel we need these skills and talents to be prioritized again. How many of us still remember Nana's cooking?

There will be 3 levels of accommodation available:

- High Care
- Moderate Care
- Low Level Care

High Care residents will have constant care and one on one staff available.

For Moderate Care residents. Their housing will include bedroom, ensuite, lounge area and kitchenette. These residents will be encouraged to use the organic dining area for meals. They will have their own garden and pet, if desired.

For Low Level Care / Independent residents. Their housing will include bedroom with ensuite, guest bedroom with ensuite, full kitchen, lounge and dining areas. Availability of own garden and pet if desired.

Facilities for Wisdom Hubs will include auditorium, cinema, raised bed community garden, residents swimming pool, guests swimming pool and café, tennis court, animal petting area, playground for young guests.

All meals provided will be organic. All products used, including building and paint materials will be non-toxic and chemical free.

The auditorium will be used for many activities including cooking classes for the residents, as well as the residents overseeing cooking classes for the community; singing, dancing, exercise and community activities. Entertainment and stage shows.

On-site (electrical?) buggies available for residents, either on their own or with a support person, to drive into Town Centre for groceries, bakery, spa, activity classes etc. There will be daily 'Town Centre' excursions for those who prefer to go as a group.

School programs will include visits to the Wisdom Hub at least once a week for the older and younger generations to interact and support one another. All members of the community will be required to volunteer at least 2 hours per week in the Wisdom Hub, for 'getting to know you' time. This could include gardening, sporting activities, reading and writing support, animal petting etc.

Included on-site will be a beauty parlor, barber; medical/dental and eye clinics; massage therapist, 'Men's Shed' - for those residents that are skilled in various trades to help with creating handmade products for the village, such as wooden toys, garden beds, repairing of bicycles, etc, as well as the mental health aspects of interacting with other males in the village.

A 'Women's Centre' for the female residents will include facilities for arts and crafts making, including knitting and crocheting for village residents; 'nana' time for village babies and young children, interacting with other female village residents to pass on the wisdoms and remedies of old.

Day trips / excursions will be available to all residents. 3 to 30 day domestic or international travel trips will be encouraged. These trips will include support and medical staff.

Religious / Spiritual Beliefs

There will be a provision within the village for personal worship, such as churches, temples and ceremonial grounds.

### EarthSong Community / Village Guide Lines

Although I may be stepping over the mark here, I do believe there needs to be some sort of 'rules' or guidelines for community residents to be aware of to ensure harmonious living within a large group environment.

These are some of my ideas so far:

- Prior to living in the village there will be a 3 week detox program in the on-site healing center. My experience is that we all suffer to some degree from lack of mentality, which leads to greed, selfishness, lack of belief in self, which can descend into violence or criminal activities. This detox will help to cleanse the body of the toxins and chemicals ingested into the body over many decades. The healing center will also incorporate cleansing of the mind to reprogram the mind with abundance, love, generosity and compassion. I realize this 3 week detox program may be seen to be infringing on people's free will, but I believe to be able to live in harmony with one another without excessive conflict or greed, we all need to be supported in dissolving the old ways of living and thinking, and become stewards of our own wellness, supporting the wellness of others, and supporting the wellness of earth and our planet.
- All products used in the village are to be organic, eco friendly or non toxic
- Respect and Honour for all living things, including people, plants, animal, land etc
- No excessive drinking. Any disorderly conduct will require counseling and a med bed session. Three 'drunk and disorderly' disturbances will mean exclusion from the community
- No smoking outdoors - this infringes on the right to clean air for others
- Noise control - no outdoor noise after 9pm, with indoor noise limited eg no loud music which encroaches on the peace of others
- Low wastage - reuse and recycle as much as possible
- No free roaming pets - to be kept within home boundary, on a leash or pet park
- 40% discount on all groceries, services etc for community residents - subsidized through RSS download funding
- Weekly 2 hour Fitness/Self Defence/Gym training
- Weekly 'Community Caring' - volunteer 3 hours with children, elders, animals, gardens etc.
- Weekly 'Living Levy' to support the ongoing running of the community / village (this levy will be at a minimal rate and subsidized through the RSS - each EarthSong Community will be registered as a non-profit and therefore become a

beneficiary on the RSS program. This ensures self sufficiency and self pride for the community)

- Weekly Healing Therapy for vitality and ongoing wellness
- Weekly Community Get Together - family entertainment, music, bbq

This is an ongoing outline and items can be added or deleted from feedback and as more information re new technologies etc come to hand.

### **White Fields Group [CB#121](#)**

- A World-wide Humanitarian Project
- Helping Grow Small and Large Communities
- Supporting and Servicing a Multi-County Area

It is by Divine Intervention and Directive that this sacred mission, WHITE FIELDS GROUP, was created as a humanitarian ministry.

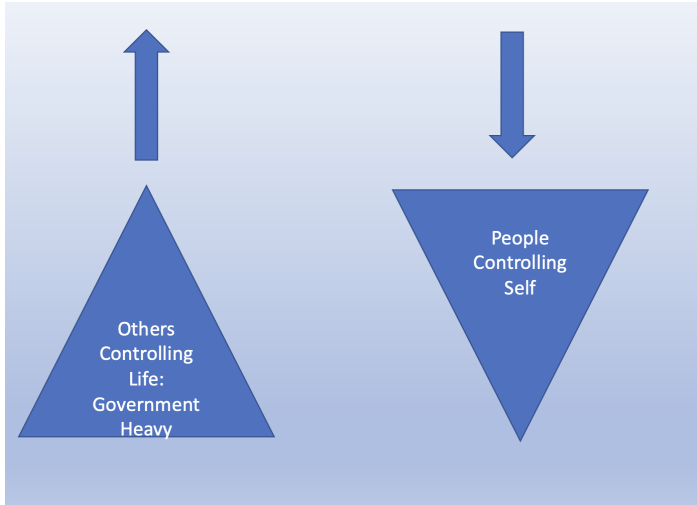

WHITE FIELDS GROUP, connecting with Love Won Society and The Talent Loop, adheres to the premise that all events are orchestrated for the good of each individual involved in an event, and because God created the event, then at all times and in all places God has won!

When an individual realizes God, or love, is behind all events that take place, then it gives that individual the chance to ponder and question the reason for the event. This pondering allows God, or love, to reveal the Divine reasons behind such events. Such Divine revelation brings peace and unspeakable joy when one understands God's, or love's, intentions

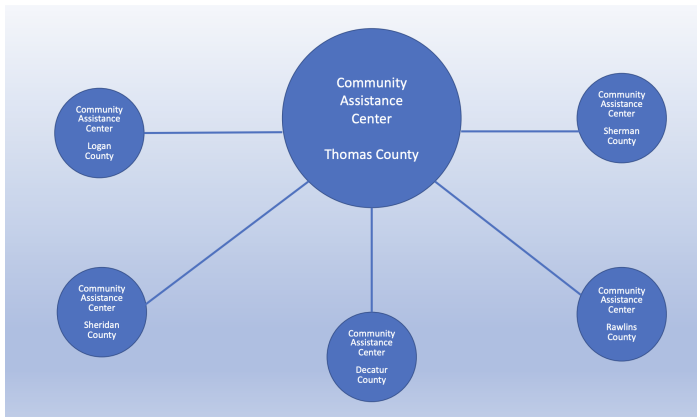

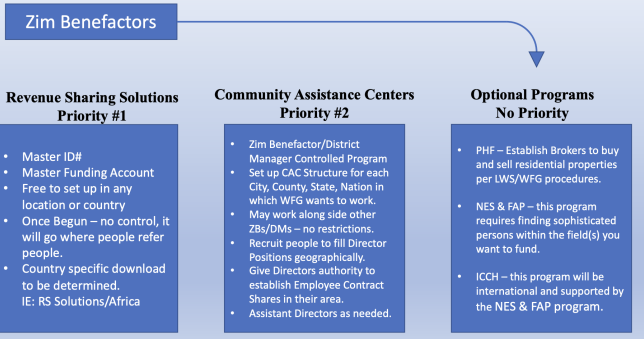

Working with WHITE FIELDS GROUP begins the journey to peace and joy in a way that breaks the cycle of pain, stress and suffering. With this in mind, this profound statement of TRUTH needs to be spread to all who want to understand the TRUTH in the experiences of their lives. The MISSION of WHITE FIELDS GROUP, therefore, is to share this understanding with all those who seek for TRUTH.

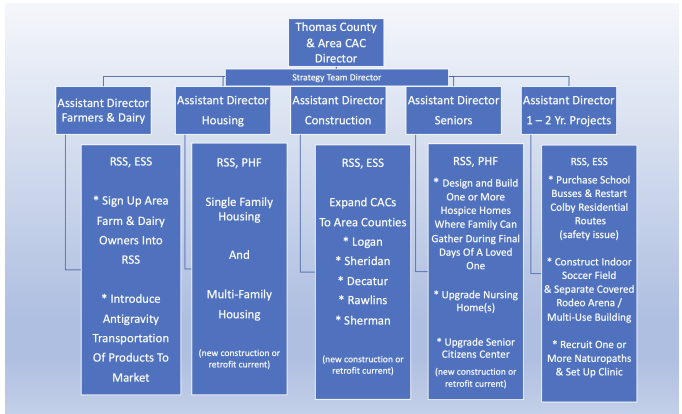

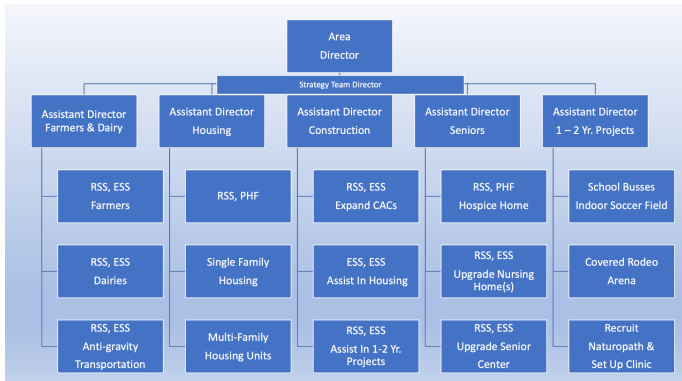

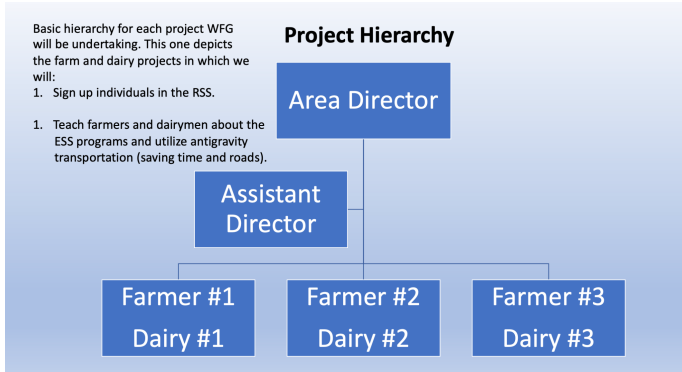

To this end, we, the members of WHITE FIELDS GROUP dedicate the remainder of our lives upon this Earth to share the Mission.

## Revenue Sharing Solutions – the Plan

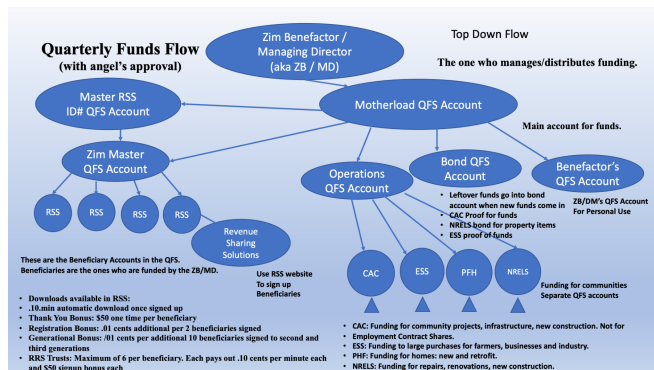

Entering the building individuals will experience a warm and loving environment. They will be welcomed by one or more staff members in a “living room” setting to make them comfortable. The aroma of fresh baked goods flowing from an in-house kitchen creates a feeling of hospitality. The in-house kitchen is staffed by a chef/cook that creates healthy meals for staff and their families as part of the Group’s “family” environment.

Calm, cool painted walls showcase photos, paintings and artwork to accent the building throughout. The front waiting room area will have comfortable furniture, area rugs and amenities indicating a home-like setting. Joyous or peaceful music will be playing throughout the building. Children’s voices may be heard if some are present in the in-house daycare for staff and guests while attending an appointment

Moving through the building guests will find glass walled offices that allow privacy while visiting with staff about their needs, yet allow light to flow into each office from above privacy curtains (used as needed). Each office will have a small round “kitchen” conference table and chairs that further allows guests to feel at home. The staff will utilize timed appointments, as well as walk-in appointments.

A conference room, ADA restrooms, break room and exercise room with shower (for a workout before or after work, even during a break if time allows) will also be on site. Following the “at home” feeling, staff members and guests will make the Community Assistance Center (CAC) an integral part of their lives.

**Director of Community Assistance Centers:** The individual we are going to recruit has years of experience in business, having been a former Chamber of Commerce Director, owner of her own home remodeling and landlord business. This individual is a Christian and has the same core values of that of the Managing Director. She and her husband, a chiropractor, have been married for 20 years and have four children.

**Farm and Dairy Assistant Director:** The individual we are going to recruit grew up on a farm, has a degree in diesel mechanics and has worked for a large implement dealership for 25 years. This individual is a Christian and has the same core values of that of the Managing Director. He and his wife, a stay-at-home mom/school teacher, have been married 20 years and have two daughters.

**Seniors Assistant Director:** The individual we are going to recruit has years of experience in business, serving senior citizens, and ministry. She and her late husband established more than one church in the area. She is a Christian and has the same core values of that of the Managing Director. She has a servant’s heart and is extremely loved by those that know her in the multi-county area in which WFG will serve.

**Construction Co-Assistant Director #1:** We will have two construction directors, one for homes and one for large buildings. The individual we are going to recruit for this

position has years of experience in the building trades industry. He has owned his own business, and has built and remodeled many homes in the area. Currently, he is teaching building trades and industrial arts at an area high school. This individual is a Christian and has the same core values of that of the Managing Director. He and his wife have been married 20 years and have eight children.

**Construction Co-Assistant Director #2:** The individual we are going to recruit also has years of experience in the building trades industry. He owns large construction and irrigation businesses, so this position will be on a consultation basis until we find a No. 2 person to fill the position on a full-time basis. He has experience in large arena construction and will be able to assist WFG with several of its 1-2 year projects to get things moving rather quickly. This individual is a Christian and has the same core values of that of the Managing Director. He and his wife have been married 20 years and have four adult children and five grandchildren.

**Housing Assistant Director:** The individual we are going to recruit has years of experience as a real estate agent and has recently become a Broker. This individual is a Christian and has the same core values of that of the Managing Director. White Fields Group will work with this individual to build, buy, remodel and sell homes so area people have a home of their own in which to grow a family or settle into retirement/volunteerism. She has two daughters, one in high school and the other in college on the West Coast.

**CAC Office Manager:** The individual we are going to recruit has years of experience as a bank teller. This individual will manage the day-to-day operation of the Thomas County CAC and train branch CAC Office Managers. Her experience with banking will create an organized, efficient office in which she understands the need for confidentiality since we will be providing others with funds. She is a motivated, cheerful and loving person and used to working with the public. This individual is a Christian and has the same core values of that of the Managing Director. She and her husband have two children.
