

HOUSING PROJECTS

ESPACIOS DE AMOR H#101

"The bonds of the continuum have been violated in the lives of many people. The bond that unites humanity as a whole and any creature in particular to the Creator only needs to be understood and felt by each one, and then it can be extended to each one as much as possible. light as power. Vladimir, expand the Space of Love. For the sake of our son, for all the children of the Earth, make the entire Earth a Space of Love. "For the sake of our son, for all Children of the Earth, convert the entire Earth into a Space of Love."

Anastasia, El Espacio de Amor

Create a vital space, in a natural environment thought and put into practice, with Love and Intelligence where families grow, learn and enrich themselves with nature, a connection with Life

Recover our ability to access their infinite knowledge, Universal memory and Co-create consciously: to achieve a spiritual development that frames life in a positive, enriching and beautiful way.

Help people change their lifestyle by creating these CACs

Heal in communion with nature, our apparent separation and connect with the greatness of Life and its blessings.

Awakening, developing and transmitting the powers that we all possess, and putting them at the service of life by creating quantum morphic resonance.

Discover who we are and develop ourselves as Cosmic Beings.

Develop perceptive and visionary capacities, as well as direct access to the "universal memory", physical health in conditions by being in an environment that tempers the character naturally and without aggression.

Connect Human Beings with the Divine

Change forever the way of life we know to the one we have by inheritance and influence with our message to the world.

Touch the soul and release that deep healing force that expands by resonance and transforms people's lives.

Objectives

The creation of Espacios de amor will come to resolve different humanitarian aspects that have been dragging on in today's society. It is intended to form communities Community Assistance Centers (CAC) on agricultural land, which offer the opportunity to live surrounded by a natural environment, where we are all responsible for ourselves as beings, for others and for the environment itself. Conquer that valuable individuality that brings us closer to a better, equitable, supportive and ecological world, in which value and price are not confused.

Scope

A Space of love will be consolidated, wherever it is needed. City, town, community, neighborhood, state, social group, ethnic group, low-income group, children, sick people, elderly, medical group, ethnic group, religious group, and it will be a complete complex, with all the necessary services of its own in daily life, respecting the environment, but adapting it and equipping it with new technologies. We want to live in a natural environment, but without suffering the inconveniences that families have been experiencing due to scarcity or the lack of opportunity of not being able to acquire or have this.

Actions to take

1. Have a team of experts in all the necessary areas to focus on investigating the problems of the locality, as well as its needs, hiring trained humanitarian personnel to provide an immediate response to said needs.
2. Buy agricultural land or mountainous forest environments near rivers, springs, lakes, waterfalls, seas, etc. to be able to supply water to form new communities.

3. They will all have free education schools (Cosmic Being), community kitchens, spaces for communion with being, to meditate and carry out disciplines typical of the new era, recreation spaces, spaces to practice sports and arts, workshops, markets, assistance for comprehensive health, research centers, shelters for those who do not have a home, energy and free Wi-Fi, drinking water, and everything that facilitates their stay in the Com-Unidad.
4. Assess the conditions of rural communities.
5. Remodel homes in subdivisions or colonies.

Project Benefits

All people will have a decent home. And they will not see their freedom and human dignity compromised by having to fight for a place to live.

A way will be found to make him feel like his, without feeling that he is being given away, but neither that he is being exploited. It is that he learns to receive her with love and that he feels worthy of her, because in reality he has already paid in advance, he does not owe anything, he is only paid what belongs to him.

Estimated Employment

I have not yet calculated how much employment will be generated, but it will be enough, in various areas and well paid, without exploitation, with the guarantee that you will have enough for your family and the time you need to enjoy quality time.

Community friendly housing and lifestyle H#102

In Australia, so many families are already heartbroken or separated due to the cabals who deliberately designed our lifestyle to be disconnected from each other, so they could control humanity. Many immigrants are also isolated from their families and friends are struggling to find connections with other people in Canberra.

My project mission is to let people live free of bills and government controls by creating community friendly housing and lifestyle in surrounding areas of Canberra, Australia. With this project, I will create self-sufficient and community friendly houses and lifestyles in the surrounding areas of Canberra ACT.

ACT is surrounded by small towns of New South Wales (NSW) including Yass, Cunning, Sutton, Bungendore, Braidwood and Bredbo. I will develop new residential areas in

these small towns or nearby because many people will want to move out from Canberra, once they no longer work for the federal government.

We are creating new designs of homes that suit family needs and residential areas that suit community-based lifestyle. About 25 to 100 households could belong to one community. Examples are:

- Circle streets with energy efficient dome shaped houses with skylights, that connected to each other through the backyards.
- Communal areas including community garden, playground, community hall and recreational/health facilities are in the middle of the circle.
- Self-sufficient and off-grid house design.
- Creation of community gardening or farming within the neighborhood.
- Creation of smaller common facilities for homeschooling, home childcare, gym and playground
- Community friendly sports and recreational facilities: easy access for households that have live within the community but no access for others who leaves outside of the community

Houses can be sold to relatives or friends or church communities who want to live a community lifestyle. For example, Mongolians who live in Canberra would love to buy a house and live as part of a community.

Who is Khorolmaa?

Khorolmaa was born into a healer family and grew up in a small village in western Mongolia. Her grandfather was a natural healer and healed many people free of charge. Khorolmaa immigrated to Australia in 2009 with her three children as a single mother. Khorolmaa remarried and had another daughter. Khorolmaa is a spiritual and heart healer who loves humankind, animals and flowers and fauna of this planet. Khorolmaa used to spend her summer holidays at her grandparent's farm and grew up close to nature and animals. Khorolmaa loves connecting with people and helping them when they need support. Khorolmaa worked for a humanitarian project with World Vision – Christian humanitarian organization in Mongolia. Khorolmaa traveled all around the country to deliver emergency food supplies for herders who lost all their livelihood due to natural disasters. It was the most unforgettable and exciting work Khorolmaa has undertaken in her lifetime on Terra. It was truly happy to see light and hope in the people's heart whom Khorolmaa was able to help.

Fence Replacement H#103

Initiation

- Use SMART for scope definition (specific, measurable, achievable, relevant, and time-bound)
- Project scope: I need a wooden fence replaced that is at least 20yrs old with materials (treated unpainted wood that is no higher than ten feet high) and completed without destroying my wife's beautiful honeysuckle vines that are currently supported by the fence, while she is away on a business trip (1 week) Additional work needed, remove two pine trees whose root systems have elevated the current fence in several spots and threaten the home foundation.
- The project must be approved before work begins by the local homeowners association (HOA) who have exacting standards for any projects in the neighborhood (Key Stakeholder)

Relevant Success Criteria

- Time, Money, and quality are normally the most important aspects of success

Success Criteria:

- Deadline and Costs (1 week and under 10K)
- Quality standards (using the standards established by the HOA guidelines)
- Acceptable standards (adhering to local standards)
- Benefits expected (gate that will close, repaired fenceline (property values go up), making the backyard a sanctuary to be enjoyed by the family)

Project Quality Standards

- What defines quality (adherence to established standards)
- What strategy helps achieve desired standards (choosing contractors that are licensed, bonded and understand and to local standards), early project approval by the HOA and stakeholders, a milestone chart (POAM) that lays out key dates and decisions

Procurement Plan

- Products and services needed: Fence (boards cut to right length, cement, gate)
- Services needed: Inspections (contractor to provide estimate for fence, contractor to remove trees and all root systems) 10K and one week for all work
- How and when materials/services needed: Trees need to be removed before fence work can begin (sequencing is key)
- Who provides materials/services: Contractors

- How to measure progress and quality (progress is based on number of board feet completed per day, quality assessed directly from the HOA and my standards)

Final Specifications

- A completed fence within HOA standards, completed within 1 week and costing no more than \$10K

Task Definition

List of tasks to be completed with definition:

- Tree and root system removal
- Yard repair from tree removal
- Gate and fence replacement
- Vines and shrubbery planting as needed

Schedules and Deadlines

- Task completion must be scheduled to ensure one is complete just before the phase begins (sequencing affects everything)
- Sequence: HOA approval, tree removal, fence work begins same time as yard repair from tree removal, landscaping work

Budget Estimation

Tasks with start-end dates, and estimated budget:

- Tree removal Day one, \$2K
- Yard repair, Day two- day four, \$1K
- Fence replacement, Day two to Day six, \$6K
- Landscape repair, Day six-Day seven, \$1K

Risk Register

- Potential Risks of project:
- Risk to home from falling trees (possible-negate w/experienced arborist and walkthrough of tree dropping procedures)
- Risk to project (mitigate timeline issue by pre-positioning materials, and being prepared to send wife to hotel is project not complete in time)
- Risk to Budget (Mitigate with a 20% allowance for cost overruns, use good estimates, research how much each task should cost)

Human Resources

- Positions needed: Project Manager (me and I'm cheap), inspectors, arborist, carpenters, masons, landscapers

Project Team Communication

- Project Manager(PM) will brief every contractor and have them sign employment contracts before work begins
- PM receives a daily update on progress (telephone for later work, in-person for ongoing work) Use POAM to ensure tasks remain on schedule
- PM receives an on-site closeout inspection from each contractor before payment rendered

Stakeholders Influence and Interest

- Build a stakeholder table that name of Stakeholder, power, interest, and expectations
- Stakeholders:
HOA (Board), high (they approve project), HOA covenant standards
Wife, very high (happy wife happy life), HOA standards plus secret garden
Neighbors, medium, don't drop a tree on their house or destroy their fences in the process

Docs needed

- POAM (Schedule and Timeline) TBD
- Budget
- Stakeholder List and Engagement Strategy
- Supplies and Services w/estimates
- Human Resources needed

A Property Project H#104

This project has been named Auscrest Property & Projects. Its focus is in the property industry and will deal in the Residential & Commercial sectors.

OUR MISSION:

The preliminary focus is on empowering all individuals to have a home of their own. This goal should be absolutely brought into balance within the next 5 to 10 years maximum. The second and third goals are more long-term:

1. To provide innovative housing solutions that enhance our relationships with each other and with the earth.

2. To repurpose existing buildings to suit local requirements for housing and/or new places to work.
3. To acquire commercial properties and release them from cabal ownership. Upon ownership, the plan is to manage, operate and repurpose as needed to turn these commercial assets into a utility that services and supports businesses that wish to operate at these locations.

HOW TO DO IT:

The immediate focus will be on acquiring inventory to supply to agents within the NRELS system. As home ownership comes into balance we expect to turn more resources to No 2 & 3 above.

There are 3 methods of creating housing inventory:

1. Buy it in the open market – our Managing Director will engage agents to source and buy residential properties in the open market. We will pay a 5% fee to the engaged Agent regardless of what he is paid (in addition) by the Seller or a Buyer or his employer.
2. Build it from scratch (new developments) – Our Design and Construction division, under its own Managing Director, will source development land and develop housing for our NRELS agents to sell. Each project will have its own dedicated team to see it through from start to finish. A typical team will have expertise in Project Management, Design, Architecture, Engineering and Construction.
3. Repurposing of existing buildings – The RePurposing Team has a longer term vision and the mandate to plan and repurpose obsolete structures left over from the current cabal era. Specialized Agents will also be engaged specifically to acquire such obsolete structures. The Repurposing Team will interact with other forward thinking community leaders in all other disciplines to repurpose these structures in keeping with what is required to service humanity for the Golden Age before us.

The Hen House [H#105](#)

About the Hen House:

As a child abuse survivor, I can relate to a lot of trauma. I have conditioned myself to be the caretaker aka “Mother Hen”. I needed someone to advocate for me as a child and it never came. I don’t ever want a child or young woman with bastard children to feel this abandonment. I was growing up. I was a single mom my whole adult life. I worked so

hard so my kids had stability. It was really hard because I didn't have good teachers some would call parents. At the "Hen House" I will be mom, grandma, teacher of life skills, and family when you don't have one.

My vision:

I watched the movie "The Chosen". Mary Magdalene's redemption moved me. She opened her home to random misfits on the Sabbath. This part of the movie I just knew in my heart I wanted to open my door. I am "Chosen"to open my door to young single moms trying to find their way by helping them raise their babies.

What we do:

At "The Hen House" we have a public mercantile with local goods/feed store/pet care/real estate services etc. all employed by single moms while they seek higher education and/or independence. My personal home will be open to young moms seeking to belong somewhere. We want "The Hen House" to be out of the big city but in a bigger village. I hope to use my Real Estate skills to also teach home ownership and how to obtain it.

The House Hen:

When you're a mother hen, you sometimes coddle your children. But there are different ways of coddling. Some coddle with luxury, others with love.

Sustainable Organic Housing (SOH) H#106

Introduction

Organic shape housing or homes are erroneously thought to be housing of the future, they are actually one of humanity's oldest structures. There are dome dwellings constructed as far back as 19,280 BC. The concrete dome Pantheon in Rome (126 AD) is the oldest, ancient structure with an intact roof and is still in use today. The Renaissance produced many famous domes, but the real renaissance in dome construction was in the 20th century. There are even new generations of organic shape buildings in Japan, the US, middle east and Africa. Modern pioneers developed barrel-shells, hyperbolic paraboloids, folded plates, membrane theory, geodesic domes, concrete thin-shells, polyurethane foam, pneumatic structures, egg shape storage and water floating homes in Britain and — finally — the Monolithic Dome.

Benefit of organic shape houses

- Better structures for homes, schools, hospitals, industries and more

- The provide protection against natural and man-made disasters
- They provide the best environmental aesthetics
- They provide healing properties to the inhabitant as a result of the shape-factor effects
- Provide optimal heating, cooling and electric power conservation

Global housing challenges

- The UK Government is aiming to build 300,000 new homes every year to match ever growing demand and keep housing costs affordable but cannot meet the target as less than 250,000 were built last year, the highest rate in a decade. Source: centre for cities report (www.centerforcities.org)
- Nigeria alone has a housing deficit of 28 Million housing units as at July, 2022. Source: Nigeria Vanguard Newspaper, July 6 2022.
- The whole Africa continent requires at least 51 Million housing units to cover the deficit. Source: Habitat for Humanity Report, 13 May, 2022
- South Africa's housing deficit is approximately 3.7 Million, Ghana is 1.7 Million, Kenya requires 250,000 housing units annually to cover the deficit. Source: Habitat for Humanity Report, 13 May, 2022
- America is short of 5 million homes. Source: CNBC 14 September, 2021

Solutions

We will design, build and distribute through the NRELS maximum of Five Hundred organic shape homes per Community Assistant Centre's (depending on the size of the population in a particular CAC or groups of CAC's). These homes will be designed with recommendations from the People of the communities, managing directors, the directors and the strategic team. These housing in a CAC will also include, schools, Holistic healing centres, leisure and recreations centres, industrial parts and incubation centres, Quantum Creative or maker space and all infrastructures.

Solution Approach

The Construction Systems Engineering Team is already in place. The interaction between the various stakeholders will begin 2 months after my Redemption Appointments.

The First year will involve the pre-planning phase with all stakeholders, requirement analysis, project management blueprint development of all systems and subsystems, contractors bidding Building systems and subsystem design, community housing infrastructure design (Roads, electricity, water, etc.)

Future Growth Plan

Year 2

Establish mode of free energy feasibility studies for power, heating, cooling and hydrogen gas. Design, simulate and deploy free energy infrastructure for CAC's.

Complete groundwater wells and install Watergen drinking water generators from Air, establish a rainwater collection system. Begin building of first community storage facilities, and start build of community recreation and leisure facilities.

Year 3

Proceed with Aquaphor project, begin community organic garden, begin second community project of 500 tiny homes, complete first community storage facilities, complete build of community recreation facilities.

Year 4

Establish mode of free energy feasibility studies for power, heating, cooling and hydrogen gas. Design, simulate and deploy free energy infrastructure for CAC's.

Year 5 to completion of project

Every two years to start another community project with 500 tiny homes. We can build one community every two years for the lifetime of our global project. Special attention to poor and under-served areas.

Special Considerations

Our team has owned an investment real estate company for about 10 years. I have gained experience in construction and acquisition as well as project management. I am comfortable with the team, project planning and construction costs.

LIONHEART HOLDING & INVESTMENTS INTERNATIONAL LLC [H#107](#)

EXECUTIVE SUMMARY

LIONHEART HOLDING & INVESTMENTS INTERNATIONAL LLC (LHII) is an organization dedicated to people helping other people. It is imperative that the people in need of our services will be able to obtain our services..

WHAT IS OUR PROGRAM ABOUT

TERMINATING THE LOSS OF HOMES THAT HAS CAUSED SUCH GREAT SUFFERING TO SO MANY FAMILIES THROUGHOUT THE USA AND AROUND THE WORLD. WE WILL CREATE JOBS AND PROVIDE TRAINING TO ENCOURAGE THE HIRING OF THOSE THAT ARE NOT CAPABLE OF FINDING A JOB IN THEIR TRAINED CAREER AND RE-EDUCATE SO THAT THOSE THAT HAVE BECOME HOMELESS CAN RE-ENTER SOCIETY AND BE ABLE TO FUNCTION AND PROVIDE FOR THEMSELVES AND THEIR FAMILY THROUGH THESE SERVICES.

MARKET PLACE

Our market segment is wide open since there aren't any companies currently doing this on the level of service that we are presently offering. As we are a rapidly growing organization, possessing up to the minute technology, assures us that there is very little competition. This gives us a unique edge.

MANAGEMENT

Our Management Team consists of 50 individual teams well versed in the people helping business as well as specializing in customer relations. Each team has 6 team members consisting of an OFFICE SECRETARY, COMPANY REPRESENTATIVE, LAWYER, PARALEGAL, STENOGRAPHER and a VIDEOGRAPHER. In short, with (LHI) You get it all.

WHAT MAKES US DIFFERENT

We are a company that is willing to do whatever it takes to end homelessness in this country. That means putting our money where our mouth is. So with LIONHEART HOLDING & INVESTMENTS INTERNATIONAL LLC. It's time to put up or shut up.

Our Teams will meet with each CITY'S LEADERSHIP like the MAYOR, CITY COUNCIL, MUNICIPAL BOARDS, as well as COUNTY and STATE.

1. We're going to give each City, County and State a great game plan that works. We'll guarantee that they'll know more about the people's needs they're working with.
2. This plan is going to be taught and imprinted onto the minds of our team so that it will become a natural part of the day to day operation.
3. Our staff will learn and teach the game plan and revamp it where and when needed until they Win the fight against Homelessness in and around the Cities in the USA).

We know that this Wisdom and Strategy will work.

OUR MISSION

TO END HOMELESSNESS, TO CREATE JOBS AND PROVIDE TRAINING

Our objective for this (\$500,000,000,000) Five Hundred Billion Dollar World Wide project is to start with the USA. We will go from city to city to city from the East Coast to the West Coast from the North to the South. We will abolish Tent Cities and living out of Paper Boxes or in Parks and Shelters. Once we have taken care of the USA, then we will continue from Country to Country until we cure this economical disease that is plaguing so many throughout the world. To make livable housing and create jobs that pay no less than \$15.00 per hour. Because of Lionheart's needs there will be over 2,000,000 jobs over the next 5 years.

1. The way that we plan to achieve our goals is to give each City a great game plan that works and one that they cannot refuse. We'll guarantee that they'll know more about the needs of the "People" they're working with...
2. Our team will indoctrinate this plan until it becomes second nature to each and every one of the members of our team.
3. We will abolish this plight that has struck our great Nation –Homelessness.

OUR PLAN

By acquiring vacant land, warehouses and offices in each city we are working to make sure the families move into their new homes that they have been waiting for so long. To make sure the homeless moving into their new home have what they need to live in a very civilized manner as they were previously accustomed to.

Phase 1- With our organization working in conjunction with the Section 8 program and the Financial Board of each city, we will assist in setting up a program to expedite the receiving of food, medical care & pharmaceutical assistance. together with employees both from the City and from our organization. We will bring in Laundromats, strip malls and other businesses into the development lifecycle.

Our objective for this (\$500,000,000,000.00) Five Hundred Billion Dollar project is to start with the state of Florida .We are a Modular Home Manufacturer Foundation.

Our goal is to provide homes for the Homeless.

Jobs will be created by using Specialized Social Workers and Therapists to gain the trust of these people that are suffering and encourage them and guide them so that this plight will never occur in their lifetime ever again.

Phase 2 - We will provide: Furnishings from Beds to Couches and Tables to Appliances, TV, Radio, Computer, Dishes, Pots, Pans, Silverware, Blinds, Linens, Clothing & Shoes Etc. It is imperative to get out of the mentality of being "Homeless". LHI will begin the retraining of these people that have suffered for too long. To help them embrace their new environment, with all of the comforts of "Home". To be able to open the closet and have clean Clothes and new Shoes to wear. This will enable the psychological repair of self-esteem and pride..

SUCCESS IS A BACKBONE NOT A WISHBONE!

THE PLAN

Our "mission" is to end World Wide Homelessness starting here in the USA and then country by country and island by island until we have achieved our goal.

We are a company that is willing to do whatever it takes to end homelessness in this country. With (LHI) we are ready to accomplish this goal. We need the funding to make our dreams a positive reality..

We will work with the Cities closely during Phase 1 by implementing the Infrastructure to “Win the fight against Homelessness in and around Cities throughout the USA”.

Part of the infrastructure that needs to be built is in the creation of jobs which will be a combination of technical, vocational and medical. In addition the hourly wage will be better than the minimum wage which is really not a functional wage with the cost of living taken into consideration. It is imperative that people live and not just barely survive in a depressing existence. This will aid in eliminating crime and suicide.

We will provide employment as follows: Human Resource, Social Worker, Office Workers, Warehouse Workers, Delivery Drivers, Home Setup Worker, Apparel and Shoe Specialist in our Clothing and Shoe Stores. We create both Youth & Seniors Facilities which will employ specialists in both arenas.

As a contract with each City is developed, it will be catered to the needs of each city. It will not be a “cookie cutter” contract for all of the Cities

We at LIONHEART HOLDING & INVESTMENTS INTERNATIONAL LLC. Thank You for your Interest in what we are doing.

WE LOOK FORWARD TO IMPLEMENTING THESE PROGRAMS UPON RECEIVING THE FUNDING THAT EACH CITY SO DESPERATELY NEEDS

Housing and Communal Programs for Third World Countries

H#108

Establish Housing and Communal Programs for Third World Countries

The goal of this project to get people out of the shanty and hut environment and provide suitable kit home accommodation clustered as a commune development.

These homes will be designed to withstand the diverse weather conditions in the country. Because of the fair-reaching and diverse needs of each community, each commune development will specialize in the production of products that can be traded with their neighboring communes.

Services will also vary so the communes can interact with one another and exchange various services. This will enable the whole region to be interdependent, serving one another.

Summary of Work to be Undertaken

- Design and construction of kit homes to replace huts
- Town Planning Services to be Established Throughout the World
- Constructions of suitable road network in and between the Communes
- Build a refuse treatment plant and fertilizer production facility.
- Design neighbourhoods to serve one another
- Develop large areas of forest and nature for recreational purposes
- Equipping people with life, work and trade skills
- Training and equipping residents in housekeeping and personal hygiene
- Develop essential inter-dependent support functions for each community
- Establishing a communal farm and provide appropriate farming equipment
- Provide suitable mode of transport for each resident of each commune
- Build educational and medical facility in each region
- Create a welfare centre for the region to support each Commune
- Establish Spiritual training in each commune knowing their creator – God
- Appoint a local liaison officer for each commune to address needs

Research and Design H#109

While in those old days I remember standing in front of my home looking up and down the street. Every yard was tidy and kept but there was nothing that one could eat.

Our homes should be suited for people that are self-sustaining. Self sustaining will be defined by our ability to not rely upon Big Business to provide. How that will be possible is directly related to the set-up of our homes and how we live in our homes and how our businesses provide services for each other.

The research that is kept in the archives of the Quantum Consciousness will be available to use and enhance upon. It will be used for our homes and our work areas. Every kitchen and every establishment that has a kitchen will have a greenhouse alongside the pantry.

We will be knowledgeable and will continually update and upgrade while expanding our garden. This expansion will not be limited to our biosphere garden homes and work. Outside of and all around the roads and towns there must be landscaping that is edible for the wild life and travelers for they too shall be provided.

With all homes set-up with a protected area for growing the foods that the people living in it like to eat

She said "How will he ever finish if he does not start"?

it would be an improvement of the people's over-all health. We will be more active while having more time to groom the home and garden.

Growing smaller crops in our own greenhouses would take pressure off of the working farmer. It would help us eat a healthy diet so that our brain, eyes, heart and all the rest of our bodies would function better. A better functioning body would mean less corrective measures.

Eliminating the need for extra manufacturing of harmful agents into our waste systems. These would be some of the goals for our potential candidates that will lead in our Medical fields.

Technology may allow us to create more sophisticated biospheres that we live and work in. Creating layers of protective filters for air quality, frequency of light, moisture and temperature. This may or not be our most radical idea but it is the one that will define our ability to live free from dependency upon big business.

These biospheres will be expanded upon as the humanitarian efforts are pushed forward. We may find ways to guide our waters through the Earth's filtering system. At the same level of the Medicinal Leaders we will implement our research and development team of engineers and scientists. They will be functioning at the same sites and work in this team to ensure that technology is not attained to the demise of Earth and her inhabitants. This is all tied in with the demand of less waste and cleaner waste.

You'd think that these ideas would be considered primary to any one of the world leaders.

Online Listing Service H#110

Help Develop online listing service for selling homes and properties through the NRELS program.

OR-Could use the existing listing services such as Realtor.com, Zillow.com, etc. to list properties as QUALIFYING AS AN "NRELS PROPERTY."

Purchase Land

Purchase large land tracts to be set aside for future use, ie: Development of planned communities with homes, parks, community gardens, small schools, shops, etc.

Parks to be used by everyone without changing entrance fees. Open land to be used/leased for farming. Forested land to be converted into Conservancy areas for everyone to enjoy.

Higher Heights H#111

Working with Homeless People

The Benefactor currently works with the homeless in Derby City and I have completed an evaluation of the gaps in the current service provisions, As a result the DCAC aims:

- To deliver service using CAC, RSS, ESS, and NRELS Action Plans
- Appoint appropriate Director, Assistant Directors and other staff to effectively manage the project
- To create / build a facility that provides for the holistic needs of homeless people in Derby and across the region, with the potential to develop a national resource
- To support the purchase of homes shelters for vulnerable people with support services
- The above will be achieved through contracted working with existing organizations like Derby City Mission
- An experienced project manager will be appointed from suitable background along with a team to enable effective running the projects,
- Personnel will be recruited from relevant background experience, passion and commitment
- The Benefactor hails from a Public Health and Teaching background and is familiar with the area to be served. Public health data indicate that life expectancy in the area is considerably reduced. The inequality experienced by the local community is based on low educational achievements, social deprivation and poverty; please see attached CVs for knowledge, expertise and experiences gained
- To enable individuals to become productive members of society through accessing the personal development programme and practical work opportunities, offered in-house where possible e.g. domestic operators, catering, cleaning, environmental care/gardening, painting and decoration.
- To provide healing through MedBed Technology
- The Personal Development Programme to include:
 - Basis Math / Basic English
 - Wider education skills
 - Life skills / DIY/ART
 - Recreational Activities / Cultural / History
 - Positive Behavior/ Portfolio Development
 - Interview Skills Appropriate including Practical experiences

Service to include Housing – long term

- Counseling /Psychological/Spiritual/Support
- Rehabilitation/Education, Nutrition, Life skills development and employment
- to provide Productive Social and Creative Activities
- To support job creation – facilitating the long term employment of individuals

VET POWER H#112

Project Report for VET POWER, a nonprofit hurricane and disaster relief program for distressed communities from natural disasters in the Gulf of Mexico and Caribbean Sea. The Mission of Vet Power will be to help house, provide gainful employment throughout the rebuilding phase and restoration to an enhanced community with schools, churches, prospering mercantiles, jobs and in many cases new houses.

Vet Power trained professionals will assist the local population affected in the cleanup and rebuilding and restoring of the community. Providing storm resistant homes and infrastructure including water, electricity, internet, and phone services.

The Vet Power Trust may choose to fund a doctor, dentist, and small hospital for communities that need the services but cannot pay for them. No costs will be incurred by the affected and with great cooperation no costs to the country itself in the affected community.

With the type of relief Vet Power can bring, we can in less than one year, clean and restore a community with a future for the victims and their families to come for many years. Not only will VP pay to fix their community, they will be paid to work to rebuild it. The process will teach many trades to the victims that will transfer to jobs in the future.

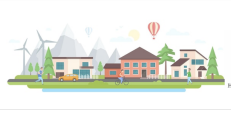

From cooks, housekeepers, store retail jobs about the cruise ship, carpenters, electricians, plumbers, equipment maintenance and handling, dock hands, teachers and other professions.

When VP turns over the project to the people they will know how to care for it, and build upon it. The community will benefit by working together in an effort to benefit each other.

Housing H#113

Mission Statement

Housing Indian Sub continent – 500 Million Homes are needed to put the people into a proper shelter. This mega project would require 50,000 beneficiaries to work in tandem to achieve this project at the earliest. This would be one of the largest humanitarian project ever conceived or attempted.

Spokane CAC New Homes Quickly Project H#114

Creating homes for low income or homeless people of our City while creating a Community of Friends

Making New Homes Quickly:

This project is designed to get people off the streets, or into their own homes as soon as possible and allow them the choice of the kind of a home they would like. Every person in all cultures deserve to have a home that fits their lifestyle and tastes. Everyone will always have their own choice of what they want. No body will dictate where they will live or how they will live their lives. They can choose what area they want to live in. There will be nobody trying to control the people telling them how to live or what to do with their property. So many have been in situations where there is always someone trying to tell them how to live, how to keep their property, or what they should do. Everyone will have a free will. We will have no HOA's. It will be encouraged to be a good neighbor and hopefully they will.

Mobile Home/Apartment Condo/Cottage Homes:

To help this go quickly we will purchase trailer parks or partial trailer parks that have Apartments as well as lots for rent. We would bring in either single wide or double

wide new mobile homes for people to live in. There could be a combination of Tiny Homes too. People would own their own lots.

- A. Renovate the property to have a concrete slab or walls for the home to be set on and winterized for year around living.
- B. Make sure all homes have appliances for the kitchen as well as a Washer and Dryer for washing clothing.
- C. Landscape to allow for some lawn, yard, a car port, fenced area for pets, and storage sheds.
- D. We would then sell each person the new home on the lot they have chosen to live in. They will own the home and property outright.
- E. The apartments on this property would be refurbished and updated with all new appliances and fitted with a laundry room to be able to wash their clothes in the home. The apartments will be converted to condos/cottages and sold to residents.
- F. The roads would be paved with ample parking for residents.
- G. There would be a playground for children as well as a community garden to raise their own food. It would be a setting where everyone helps to take care of the garden.
- H. If room permits, we will have recreational things to do like a swimming pool, badminton, or tennis, and playground.
- I. There could be a grounds keeper that loves that kind of work.
- J. Everyone will have the free tesla energy to light and possibly warm their homes.

Apartment Condo/ Single Cottages. The choice will be yours...

Single Mobile / Double Wide Mobile What type of living do you choose?

We would purchase a couple pieces of property (I know of one in my area that is already hooked up to septic and has water and electricity on the property). It used to be a RV park. We would then make that a property for tiny homes with a small grocery store and a playground for the children in the park.

- A. In this Tiny Home Community, each home will be winterized. All of them will be new, as there is not currently any communities like this.

- B. We would have a small yard with a fenced in area for pets on each lot, a storage shed, and a car port if there is room. This little community would be a totally fenced in, for safety in this family friendly area as it is close to a busy road.
- C. Streets would be paved, and lots will have concrete to have the tiny home on. This would make a home available rather quickly for those people who are currently without a home.
- D. Since most of the families or single people have never owned a home there could be a caretaker who loves to garden who could help maintain the grounds.
- E. If the lots are too small (which I can't remember how big they are) there will be separate parking for convenience.
- F. Each property will be sold to the person wanting the home already on the lot.
- G. Everyone will have the free tesla energy to light and possibly warm their homes.
- H. If room permits, we will have recreational things to do like a swimming pool, badminton, or tennis.
- I. There will be a community store so people will not have to go to a huge store to purchase necessities.
- J. If possible, a community garden to grow their own food. Everyone would need to work together.
- K. If there is enough room, we would build a club house for functions.

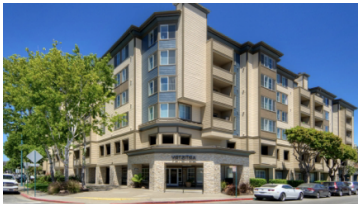

Tiny Home community with all the perks of owning your own home

Condominium's from Apartments or Townhouse:

- A. There will be apartments and townhouses to be converted to condominiums with possible two or three bedrooms for families.
- B. Each condo will be renovated to new updated interiors.
- C. Each new Condo will have access to the swimming pool, all recreational facilities, and all playgrounds and walking paths.
- D. All new Condos will have new appliances, new updated flooring, new windows, and doors if needed.
- E. Any water heaters or furnaces older than 10 years, needing updated will be replaced.
- F. Each new condo will have an area for pets to be taken outside to do their business.
- G. Maintenance for the grounds, gardens, and landscaping for each property.
- H. All Condo owners will have access to the club house to hold special gatherings with families or other functions.
- I. Everyone will have the free tesla energy to light and possibly warm their homes.

There will be so many opportunities to create neighborhoods of people owning their own homes and prospering like never before. Our intent here is to get people into homes so they can start living lives of abundance and joy. For far too long we have been denied what all of us truly want and need. A place called home.

This program will bring us closer than we ever thought possible. We can enjoy our lives and do what we want when we want. The control from others is gone. It is your life now. Enjoy it to the fullest.

It is your life do with it what you want!

Project House Funding for the communities in the Ardeche H#115

Present situation:

In France many villages/hamlets are reduced to pauperism due to the fact that its inhabitants leave because of lack of work and thus small businesses and social life disappears.

Houses, buildings get neglected, the environment looks shabby.

There is not much left of what once was a flourishing community.

Example:

In our village there are around 100 people, 75% of which are in old age and about 10 are children. Our village is located at an altitude of 1250 meters where about 40 houses are located. In the lower (altitude 850 meters) hamlet 25 houses are located.

Furthermore another 20 houses and farms in the outer area.

A bar, a church, a hotel-restaurant, 2 tourist-lodges and a town hall. To do the necessary shopping one has to drive at least 20 kilometers. The bakery and the small supermarket disappeared a long time ago.

For clothing and more luxury items one has to drive at least 35 kilometers. There is 1 Association, subsidized with a small amount by the village council, organizing afternoons and evenings with round games for kids and elderly people. Mutual meals, a yearly outing and cocktail-hours are organized.

In August a Blueberry Event, where small producers of honey, marmalade, cheese and sausages are offered their produce for sale, next to the blueberries. This event attracts many people from neighboring villages and cities.

Because of the size of the village there is little budget for maintenance so that the infrastructure, like the road in the village, looks like a patchwork blanket.

(The roads outside the village/hamlet are maintained by the Departement.) The townhall, the church and the village square have a neglected appearance. In wintertime only the permanent inhabitants are present. In summertime the owners of the (holiday) houses arrive and increase the number of inhabitants to 125.

The lack of public transport in our Department is also a cause of isolation, especially for the elderly who do not own a car or are too old to drive a car.

What we want to achieve:

It is a growing tendency that many young people and 50+ and 60+ year old people prefer living in a small village instead of living in a big city. Because of the fact that the houses are old, and left by their owners a long time ago, and thus neglected, the costs of making these houses habitable again at present-day norms, are very high.

By offering financial aid, houses can be renovated, provided with the highest possible economic and environmental energy efficiency.

Also for the renovation of the Town Hall, the Church, the old Post Office, the infrastructure, the Bar and the Hotel-Restaurant, we want to offer financial support.

How to achieve it:

A technical advisor/engineer makes an inventory of the present state of buildings, houses, roads/infrastructure of the village.

Communication/Public Relations with inhabitants, owners and the Council (task for an intermediary/CAC?) is vital for the successful execution of the project.

A Director is in charge of this project:

Special attention must be for the re-establishment of a Supermarket and Bakery in a building or in a mobile van.

By establishing local public transport, for example a bus or taxi, cheap and simpler transport can be offered to the elderly and other people in need of transport, like physically and mentally handicapped people, mothers with baby's and small children.

Effect of this investment:

By renovation of the village, the appeal to possible new inhabitants will be increased. The pleasure of living in your own house in the village will be heightened. It will stimulate small businesses to settle here.

The liveableness for people will be enlarged, which will result in more activities.

Just for our village?

This approach is valid for all villages/quarters/districts/neighborhoods in all french Departments. This is my first initiative. And it is an extra incentive for employment with regard to building.

Young people looking for challenging jobs and a meaningful life/existence, will be attracted by the various professions needed for the renovation of their environment.

Villages will regain their original and positive characters.

Housing PHF Program H#116

Mission Statement

Housing Indian Sub continent – 500 Million Homes are needed to put the people into a proper shelter. This mega project would require 50,000 beneficiaries to work in tandem to achieve this project at the earliest. This would be one of the largest humanitarian project ever conceived or attempted.

PHF – Housing scenario in India

Housing in India would have to be featured in a whole different level

- As against 95% in rural areas, only 69% of the total households in India own houses. This pattern is not surprising as a large share of the total urban population are migrants. As per the Census Definition, a household owns a house if it does not make any payments in the form of rent to anyone.25-Sept-2022
- The GOI claims the above but homes are not supposed to be shacks or mud houses in the rural areas and shanty towns in the urban cities. As per divine law human beings were created to live in comfort and prosperity so that they could ascend spiritually into higher dimensions of consciousness. However, the cabal has not allowed this to happen for their own gains. India for many centuries has been under cabal control.
- The official narrative has been for the past 73 years that the government is giving housing to the people of India. Rampant corruption has not allowed this to happen. Politicians, Bureaucrats, Agencies, Brokers, Builders and local officials are all hand in glove with each other with the result only a fraction of those funds allocated for public relief trickles down to the roots. Anything and everything given by the government as relief is of very low standards due to the reasons stated.
- The Alliance/LWS PHF will change the whole scenario!

The Present Scenario -Images

Urban

Rural

What the Alliance/LWS/Prosperity All would like to see soon!
