

Artificial Grass vs Natural Grass – Which Is Better?

If you're considering upgrading your garden, you might be wondering whether artificial grass or natural grass is the better option. Both have their benefits, but many homeowners are now choosing artificial lawns for their **long-term convenience and appearance**.

Maintenance

Natural Grass

- Requires mowing, watering, fertilising, and weed control
- Can become patchy or muddy in wet weather

Artificial Grass

- Minimal maintenance
- No mowing or watering required
- Stays green all year round

Appearance

Natural Grass

- Can look great when well maintained
- Often becomes brown or worn during extreme weather

Artificial Grass

- Maintains a **consistent green appearance throughout the year**
- No bare patches or muddy areas

Durability

Natural Grass

- Can become worn from heavy use
- May struggle in shaded areas

Artificial Grass

- Designed for **high traffic and family use**
- Ideal for children, pets, and outdoor entertaining

Long-Term Costs

While natural grass is cheaper initially, it requires **ongoing maintenance costs** such as lawn equipment, water usage, fertiliser, and lawn treatments.

Artificial grass involves a **higher initial installation cost**, but many homeowners find it saves money over time due to minimal upkeep.
