

Everyone's Top 30 HVAC Applications

Summary

For those wishing to gain a 'Fastrack' learning experience into HVAC this is the course for you. Most HVAC Applications are either classed as 'wet system applications' or 'air system applications'. Therefore, if you are in an electrical or mechanical role but do not have any Building Services experience then this course will enable you to gain knowledge of the basic terminology used in the industry.

Target Audience

This program is suitable for anyone who is new to the world of Heating and Ventilation applications and control systems. It's ideal for those who are making a transition from an electrical or mechanical engineering background.

In the past this course has also been a great introduction for 'non-technical' people who may be venturing into a sales role or a bureau operator role. (contact us for more information)

Prerequisites

Engineering knowledge is an advantage but not essential.

Objectives

- Introduce participants to the world of Building Control Systems.
- Give participants an understanding of control system basics and terminology.
- Enable participants to understand the basics of HVAC Applications.
- Give participants foundation knowledge of common terms used in HVAC.

Key Learning Take-Aways

- Participants will be able to explain what a control system is used for in Buildings
- Delegates will be able to understand the basic applications used in Wet and Air systems.
- Participants will have an increased knowledge of HVAC Terminology.

Course Duration

This course is a 1 Day, instructor-led, classroom-delivered workshop.
