

Leveraging Technology To Create Better Building Data

3D Reality Capture Tours

3D Reality Capture imaging produces a 360° virtual tour of a space, documenting a snap shot in time of existing conditions of any site. These virtual tours are formatted to be viewed on a cell phone, tablet, or PC. This type of visual provides a data-rich means of collaboration with a wide variety of uses in asset management, facility management, sales and marketing, risk management and more.

Better Building Data
6075 Yuma Lane North
Plymouth, MN. 55446

THE BENEFITS:

- Increased co-branding opportunities within virtual tours
- Monthly reports on engagement patterns
- New ways to leverage brand identity
- Employee on-boarding tours with imbedded video, audio, and content links
- Tours designed for mobile device viewing

For professionals in the retail, hospitality or commercial real estate industries, delivering immersive and engaging virtual tours is a key step to success. Utilizing high definition cameras and proprietary software, we provide quality images and robust tours that keep clients engaged. 3D photorealistic rendering and VR tours grow knowledge, build trust, improve online results, and help achieve offline goals. Our customers report increased views and engagement, and are reaching new clients faster and easier.

**BETTER
BUILDING
DATA**
