Plymouth, MN. 55446

RFID readers and mounted gateway readers together produce a unique setup that provides the best tracking results. Each time an RFID tagged asset crosses through a reader entry point, its data is captured and time-stamped. Leveraging the cloud allows for quick updates to the data, and provides real-time locations of each asset. Asset data is available through our iOS device for on-site data management and asset tracking history. Contact Better Building Data for more information on how RFID can be used in your business.
