

The amniotic membrane tissue in PROKERA® products, which is preserved using the Company's proprietary CryoTek® processing method to ensure the tissue retains its full biologic activity, has natural therapeutic actions that help damaged eye surfaces heal. PROKERA® products provide faster and more effective healing of the cornea with less pain, scarring and inflammation, leading to clear corneas and improved clinical outcomes.

Insertion and removal of the PROKERA device is a fast and easy process for our doctors. It involves simply numbing the eye and sliding the membrane onto the eye with plenty of lubricating drops.

## What is PROKERA?

PROKERA is a therapeutic device used by eye doctors around the world to protect, repair and damage eye surfaces. PROKERA is made by clipping a piece of amniotic membrane tissues in between two rings made out of a clear, flexible material.

PROKERA®

We've Got You Covered

## Healing on the Ocular Surface

### What does PROKERA do?

#### Helps the eye heal:

The amniotic membrane tissue in PROKERA has natural therapeutic actions that help damaged eye surfaces heal. Eyes treated with PROKERA have quicker healing, less pain, less scarring, and less inflammation.

#### Protects the eye surface:

The amniotic membrane in PROKERA is thin and clear like the tissue on the surface of your eye and protects your eye's damaged tissue while inserted.

### What does PROKERA treat?

PROKERA is used by eye doctors all over the world to treat eye diseases such as Keratitis, corneal scars, chemical burns, corneal defects, partial limbal stem cell deficiency and many other ocular surface diseases with inflammation.

## Where does the amniotic membrane come from?

The placentas used to prepare PROKERA are donated by consenting mothers after cesarean sections (C-section) births. Mothers that donate are fully informed, have healthy lifestyles, and are tested against infectious disease prior to donation.

## What is amniotic membrane tissues?

Amniotic membrane is part of the placenta. It is the tissue closest to the baby throughout development in the womb. Amniotic membrane protects the baby from any harm and it has natural therapeutic actions which help the baby develop. This tissue has healing properties that aid in ocular surface repair.

Corneal scar **before** PROKERA treatment.

Corneal scar **after** PROKERA treatment.

Chemical burn **before** PROKERA treatment.

Chemical burn **after** PROKERA treatment.

## Is PROKERA safe?

PROKERA is a safe, effective treatment provided by a tissue bank regulated by the FDA. The tissue has passed many quality control tests before it is provided to your doctor. Ask one of our doctors if you are concerned about the risks involved with using a human tissue.
