

### Consumer Confidence Report (CCR) Certification Form

Name of CWS: Johnsonburg Municipal Authority PWSID Number: 6240007

The community water system (CWS) named above confirms that its CCR for the period of January 1, 2019 through December 31, 2019 has been distributed to customers (and appropriate notices of availability have been given). The system also confirms that the information in the CCR is correct and consistent with the compliance monitoring data previously submitted to the Pennsylvania Department of Environmental Protection (DEP).

**Please check all items that apply to your CCR delivery.**

- CCR was hand-delivered to customers. Date delivered: \_\_\_\_\_
- CCR was distributed by mail. Date mailed: \_\_\_\_\_
- CCR was distributed by other direct delivery method(s). (check all that apply):
  - Mail notification that CCR is available on website via a direct uniform resource locator (URL)\*  
Direct URL address: www. johnsonburg municipal authority Date mailed: June 30, 2020
  - E-mail – direct URL to CCR\*
  - E-mail – CCR sent as an attachment to the e-mail\* } Date(s) email sent: \_\_\_\_\_
  - E-mail – CCR sent embedded in the e-mail\*

\* If the CCR was provided electronically, attach a description of how a customer requests a paper copy.

- "Good faith" efforts were used to reach non-bill paying consumers:
  - posting the CCR on the Internet at www. johnsonburg municipal authority
  - mailing the CCR to postal patrons within the service area (attach a list of zip codes used)
  - advertising the availability of the CCR in news media (attach copy of announcement)
  - publication of CCR in local newspaper (attach copy of newspaper announcement)
  - posting the CCR in public places (attach a list of locations)
  - delivery of multiple copies to single bill addresses serving several persons
  - delivery to community organizations (attach a list)
  - electronic newsletter or listserv (attach a copy of the article or notice)
  - electronic announcement of CCR availability via social media outlets (attach list of outlets utilized)
- The CCR was posted on a publicly-accessible Internet site because this system serves 100,000 or more.  
Internet site address: www. \_\_\_\_\_
- Delivered CCR to other agencies as required by the state/primacy agency (attach a list)
- A copy of the CCR and a completed CCR Certification Form have been sent to the DEP district office (or the Allegheny County Health Department) that provides oversight and support of this water system. (See back of form for addresses.)

Certified by: Signature: Daniel J. Newell Print Name: Daniel J. Newell  
Title: General Manager Phone: 814-965-4218 Date: 7-13-20

**For DEP use only. Checked by: \_\_\_\_\_ Date: \_\_\_\_\_**

## 2019 ANNUAL DRINKING WATER QUALITY REPORT

**PWSID #: 6240007**

**NAME: JOHNSONBURG MUNICIPAL AUTHORITY**

*Este informe contiene información importante acerca de su agua potable. Haga que alguien lo traduzca para usted, ó hable con alguien que lo entienda.* (This report contains important information about your drinking water. Have someone translate it for you, or speak with someone who understands it.)

### **WATER SYSTEM INFORMATION:**

This report shows our water quality and what it means. If you have any questions about this report or concerning your water utility, please contact our office at (814) 965 – 4218. We want you to be informed about your water supply. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the third Tuesday of each month at 6:00 PM, at the Johnsonburg Municipal Authority Office, located at 601 Market Street, Johnsonburg, PA 15845.

### **SOURCE(S) OF WATER:**

Our water source(s) are:

Source ID 001 Silver Creek Reservoir, being a Surface Water Source

Source ID 002 Powers Run Reservoir, being a Surface Water Source

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the *Safe Drinking Water Hotline* (800-426-4791).

### **MONITORING YOUR WATER:**

We routinely monitor for contaminants in your drinking water according to federal and state laws. The following tables show the results of our monitoring for the period of January 1 to December 31, 2019. The State allows us to monitor for some contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of our data is from prior years in accordance with the Safe Drinking Water Act. The date has been noted on the sampling results table.

### **DEFINITIONS:**

*Action Level (AL)* - The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

*Maximum Contaminant Level (MCL)* - The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

*Maximum Contaminant Level Goal (MCLG)* - The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

*Maximum Residual Disinfectant Level (MRDL)* - The highest level of a disinfectant allowed in drinking water. There is

convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

*Maximum Residual Disinfectant Level Goal (MRDLG)* - The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

*Minimum Residual Disinfectant Level (MinRDL)* - The minimum level of residual disinfectant required at the entry point to the distribution system.

*Level 1 Assessment* – A Level 1 assessment is a study of the water system to identify potential problems and determine (if possible) why total coliform bacteria have been found in our water system.

*Level 2 Assessment* – A Level 2 assessment is a very detailed study of the water system to identify potential problems and determine (if possible) why an *E. coli* MCL violation has occurred and/or why total coliform bacteria have been found in our water system on multiple occasions.

*Treatment Technique (TT)* - A required process intended to reduce the level of a contaminant in drinking water.

*Mrem/year* = millirems per year (a measure of radiation absorbed by the body)

*pCi/L* = picocuries per liter (a measure of radioactivity)

*ppb* = parts per billion, or micrograms per liter ( $\mu\text{g/L}$ )

*ppm* = parts per million, or milligrams per liter (mg/L)

*ppq* = parts per quadrillion, or picograms per liter

*ppt* = parts per trillion, or nanograms per liter

**DETECTED SAMPLE RESULTS:**

<b>Chemical Contaminants</b>								
Contaminant	MCL in CCR Units	MCLG	Level Detected	Range of Detections	Units	Sample Date	Violation Y/N	Sources of Contamination
Chlorine	4	4	0.64	0.04-1.40	ppm	2019	N	Water Additive used to control microbes
Trihalomethanes (TTHM)	80	NA	51	9-105	ppb	2019	Y	By-Product of drinking water chlorination
Haloacetic Acids Five (HAA5)	60	NA	153	10-1100	ppb	2019	Y	By-Product of drinking water chlorination
Barium	2	2	0.058	0.0164 – 0.0785	ppm	9/17/2019	N	Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits

\*EPA's MCL for fluoride is 4 ppm. However, Pennsylvania has set a lower MCL to better protect human health.

<b>Entry Point Disinfectant Residual</b>							
Contaminant	Minimum Disinfectant Residual	Lowest Level Detected	Range of Detections	Units	Sample Date	Violation Y/N	Sources of Contamination
Chlorine Powers Run (116) Silver Creek (115)	0.2	0.50 0.30	0.50-1.17 0.30-1.16	ppm	2019	N	Water additive used to control microbes.

<b>Lead and Copper</b>							
Contaminant	Action Level (AL)	MCLG	90 <sup>th</sup> Percentile Value	Units	# of Sites Above AL of Total Sites	Violation Y/N	Sources of Contamination
Lead	15	0	0.204	ppm	0	N	Corrosion of household plumbing.
Copper	1.3	1.3	0	ppm	0	N	Corrosion of household plumbing.

<b>Microbial (related to Assessments/Corrective Actions regarding TC positive results)</b>					
Contaminants	TT	MCLG	Assessments/ Corrective Actions	Violation Y/N	Sources of Contamination
Total Coliform Bacteria	Any system that has failed to complete all the required assessments or correct all identified sanitary defects, is in violation of the treatment technique requirement	N/A	See detailed description under "Detected Contaminants Health Effects Language and Corrective Actions" section	N	Naturally present in the environment.

<b>Microbial (related to E. coli)</b>					
<b>Contaminants</b>	<b>MCL</b>	<b>MCLG</b>	<b>Positive Sample(s)</b>	<b>Violation Y/N</b>	<b>Sources of Contamination</b>
<i>E. coli</i>	Routine and repeat samples are total coliform-positive <b>and</b> either is <i>E. coli</i> -positive <b>or</b> system fails to take repeat samples following <i>E. coli</i> -positive routine sample <b>or</b> system fails to analyze total coliform-positive repeat sample for <i>E. coli</i> .	0	0	N	Human and animal fecal waste.
<b>Contaminants</b>	<b>TT</b>	<b>MCLG</b>	<b>Assessments/ Corrective Actions</b>	<b>Violation Y/N</b>	<b>Sources of Contamination</b>
<i>E. coli</i>	Any system that has failed to complete all the required assessments <b>or</b> correct all identified sanitary defects, is in violation of the treatment technique requirement	N/A	See description under "Detected Contaminants Health Effects Language and Corrective Actions" section	N	Human and animal fecal waste.

<b>Turbidity</b>						
<b>Contaminant</b>	<b>MCL</b>	<b>MCLG</b>	<b>Level Detected</b>	<b>Sample Date</b>	<b>Violation Y/N</b>	<b>Source of Contamination</b>
Turbidity	TT=1 NTU for a single measurement	0	14.65	11/1/19	Y	Soil runoff
	TT= at least 95% of monthly samples ≤ 0.3 NTU		91.8	11/2019	Y	

<b>Total Organic Carbon (TOC)</b>					
<b>Contaminant</b>	<b>Range of % Removal Required</b>	<b>Range of percent removal achieved</b>	<b>Number of quarters out of compliance</b>	<b>Violation Y/N</b>	<b>Sources of Contamination</b>
TOC					
300 Powers	25 - 35%	0% - 61.17%	2	Y	Naturally present in the environment
301 Silver Crk		0% - 54.34%	3		

**DETECTED CONTAMINANTS HEALTH EFFECTS LANGUAGE AND CORRECTIVE ACTIONS:**

**Turbidity:** Has no health effects. However, turbidity can interfere with disinfection and provide a medium for microbial growth. Turbidity may indicate the presence of disease-causing organisms. These organisms include bacteria, viruses, and parasites that can cause symptoms such as nausea, cramps, diarrhea and associated headaches. *Corrective Action: Authority staff is improving monitoring, undergoing training, and external oversight, system maintenance and construction is underway for a new state-of-the-art water treatment facility to offer enhanced treatment, construction completion estimated 2<sup>nd</sup> quarter 2021.*

**Total Trihalomethanes (TTHMs):** Some people who drink water containing THMs in excess of the MCL over many years may experience problems with their liver, kidneys, or central nervous system, and may have an increased risk of getting cancer. The distribution system dead end lines, aged water and removal efficiency during treatment results in the reaction with disinfection chemicals and creates associated by-products TTHMs. *Corrective Action: Authority is working to correct distribution system issues, optimize treatment and construction is underway for a new state-of-the-art water treatment facility to offer enhanced treatment, construction completion estimated 2<sup>nd</sup> quarter 2021.*

**Haloacetic Acids (HAA):** Some people who drink water containing HAA in excess of the MCL over many years may have an increased risk of getting cancer. The distribution system dead end lines, aged water and removal efficiency during treatment results in the reaction with disinfection chemicals and creates associated by-products HAAs. *Corrective Action: Authority is working to correct distribution system issues, optimize treatment and construction is underway for a new state-of-the-art water treatment facility to offer enhanced treatment, construction completion estimated 2<sup>nd</sup> quarter 2021.*

**Total Organic Carbon:** TOC has no health effects. However, TOC provides medium for the formation of disinfection byproducts. These byproducts include THMs and HAAs. Drinking water containing these byproducts in excess of the MCL may lead to adverse health effects, liver or kidney problems, or nervous system effects, and may lead to an increased risk of getting cancer. Removal efficiencies of the existing treatment facilities are limited. *Corrective Action: Authority is working to correct optimize treatment, and construction is underway for a new state-of-the-art water treatment facility to offer enhanced treatment, construction completion estimated 2<sup>nd</sup> quarter 2021.*

**OTHER VIOLATIONS:**

On October 31 and November 1, the Silver Creek treatment plant experienced an upset in water quality resulting in the inability of the facility to meet effluent turbidity limits, and exceeded treatment technique requirements. The system is undergoing monitoring, external oversight; and a new treatment facility is under construction. Inadequately treated water may contain disease-causing organisms. These organisms include bacteria, viruses, and parasites which can cause symptoms such as nausea, cramps, diarrhea and associated headaches. A boil water advisory was issued and sampling conducted.

In addition, the following violations are also noted: samples were taken/reported late for Soluble Organic Chemicals

(SOC's) (1<sup>st</sup> quarter 2019); Failure to monitor for TOC (7/1/2019); Failure to record turbidity and perform self-assessments (9/19, 10/19, 11/19, 12/19); exceedance of running annual average for HAAs (7/19, 10/19); low chlorine residual in Distribution system (8/19).

### **EDUCATIONAL INFORMATION:**

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity. Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- Inorganic contaminants, such as salts and metals, which can be naturally-occurring or result from urban stormwater run-off, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, and septic systems.
- Radioactive contaminants, which can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, EPA and DEP prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. FDA and DEP regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's *Safe Drinking Water Hotline* (800-426-4791).

### **Information about Lead**

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Johnsonburg Municipal Authority is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the *Safe Drinking Water Hotline* or at <http://www.epa.gov/safewater/lead>.

### **OTHER INFORMATION:**

**If you want a printed copy, please contact our office at (814) 965 – 4218**

**All future Consumer Confidence Report's (CCR's) will be available on our website at:**
