

How to update the WPSD dashboard and the Linux operating system at the same time.

From the main Dashboard Click ADMIN-> ADVANCED-> TOOLS when you click on TOOLS its a drop down menu, look for SSH click that and it will bring up a login prompt that looks like a dos terminal window. Type in your username and password: the default username is pi-star and the default password is raspberry, both are in lower case.

The command to run the update for the dashboard and the Linux operating system is as follows and its all lowercase:

```
sudo wpsd-update all
```

hit enter and let the update complete if you have never run this type of update it will take about 30 minutes for this update to complete.

How to update the PI-STAR dashboard and the Linux operating system at the same time.

From the main Dashboard click CONFIGURATION-> EXPERT-> SSH ACCESS

That and it will bring up a login prompt that looks like a dos terminal window. Type in your username and password: the default username is pi-star and the default password is raspberry, both are in lower case.

The command to run the update for the dashboard and the Linux operating system is as follows and its all lowercase:

```
sudo pistar-update all
```

hit enter and let the update complete if you have never run this type of update it will take about 30 minutes for this update to complete.
