Introduction

atopcli is a command line client for the Atop Mainnet. Atop Mainnet users can use atopcli to send transactions and query the blockchain data.

Working Directory

The default working directory for the atopcli is \$HOME/.atopcli, which is mainly used to save configuration files and data. The Atop Mainnet key data is saved in the working directory of atopcli. You can also specify the atopcli working directory by --home

Global Flags

GET Commands

All GET commands has the following global flags:

Name, shorthand	Type	Required	Default Value	Description
--chain-id	string			Chain ID of tendermint node
--home	string		/Users/bobur/.atopcli	Directory for config and data
--trace	string			Print out full stack trace on errors
