

ClairCity received funding for the European Union's Horizon 2020 research and innovation programme under grant No. 689289.

WeCount has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No. 872743.

Involving young people in clean air research and decision making

Experiences from three large-scale citizen engagement projects

Dr Laura Fogg-Rogers and Sophie Laggan UWE-Bristol

Citizen-led air pollution reduction in cities

Everyday, air pollution and carbon emissions are produced by our commutes to work, by heating our homes, or through our daily lifestyles.

The ClairCity aim was to create a major shift in public understanding towards the causes of poor air quality, inviting citizens to give their opinions on air pollution and carbon reduction to shape the cities of the future.

CONDITIONS

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No. 689289.

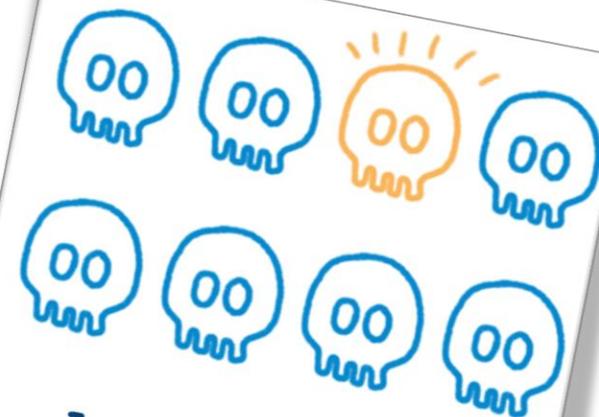

IT'S YOUR HEALTH

BREATHING POLLUTED AIR RAISES THE CHANCES OF HEART ATTACKS, STROKES, AND LUNG CANCER. IT MAKES RESPIRATORY CONDITIONS LIKE ASTHMA OR BRONCHITIS WORSE.

DIESEL VS PETROL

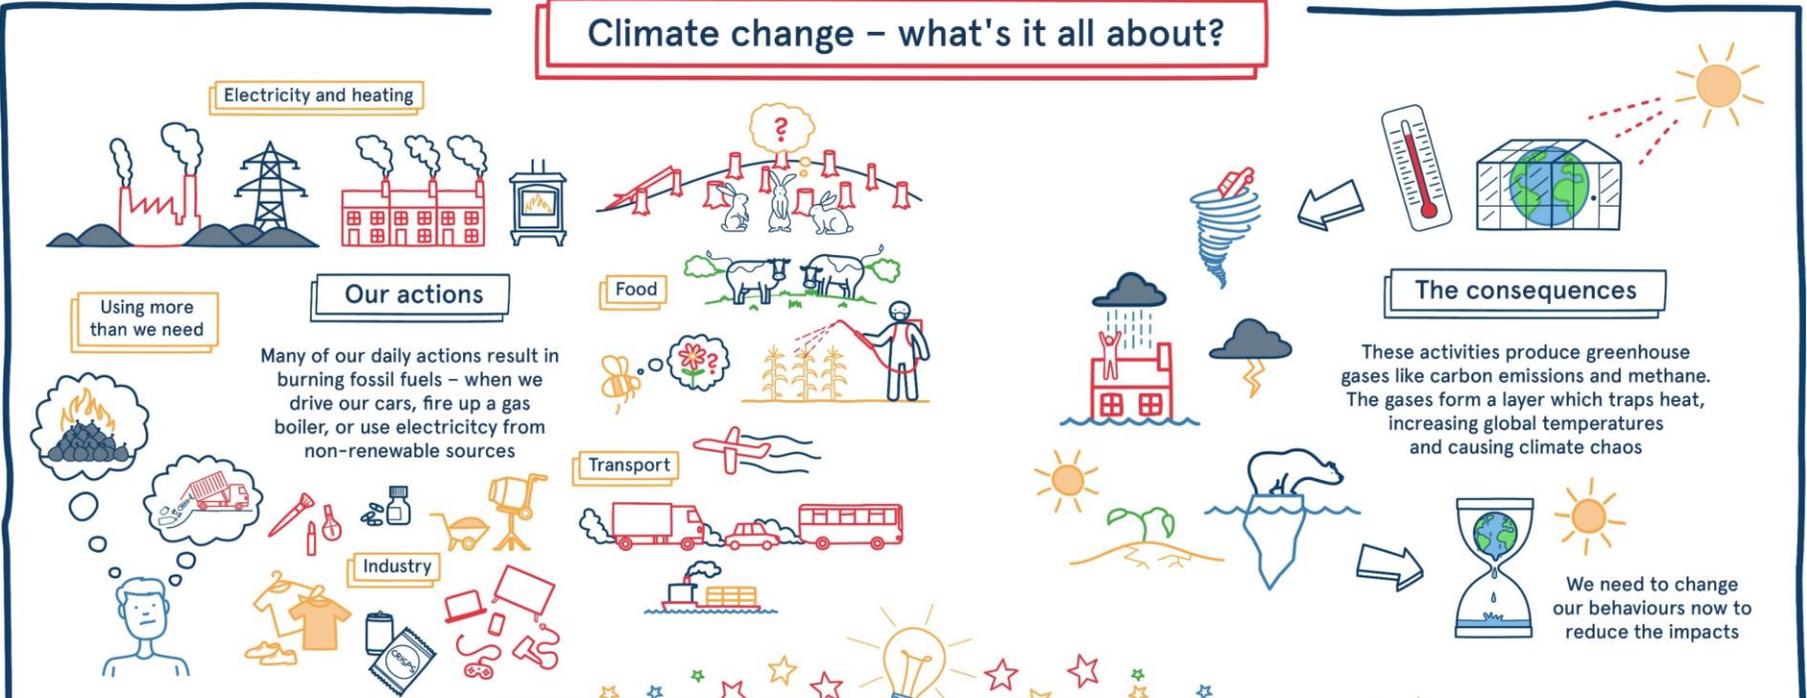

DIESEL CARS CAUSE MORE AIR POLLUTION THAN PETROL CARS, BUT HAVE LOWER CARBON EMISSIONS.

1 IN 8 DEATHS

AIR POLLUTION CAUSES ONE IN EVERY EIGHT PREMATURE DEATHS WORLDWIDE.

Climate change – what's it all about?

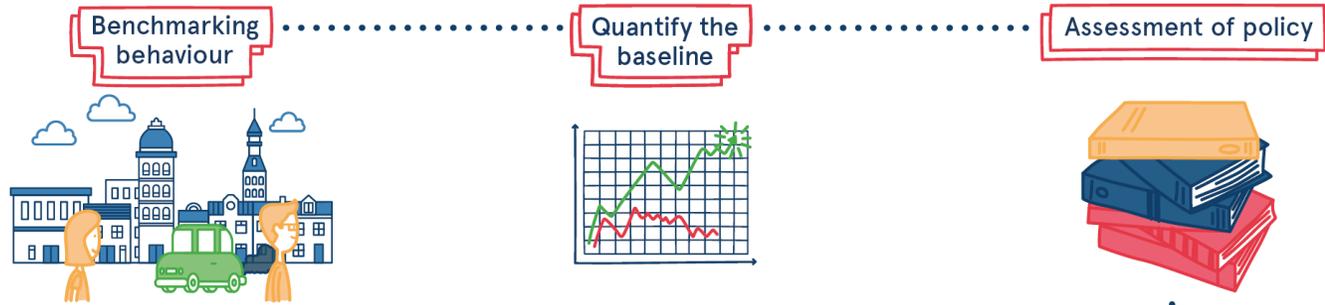

A better future is possible – how will you play your part?

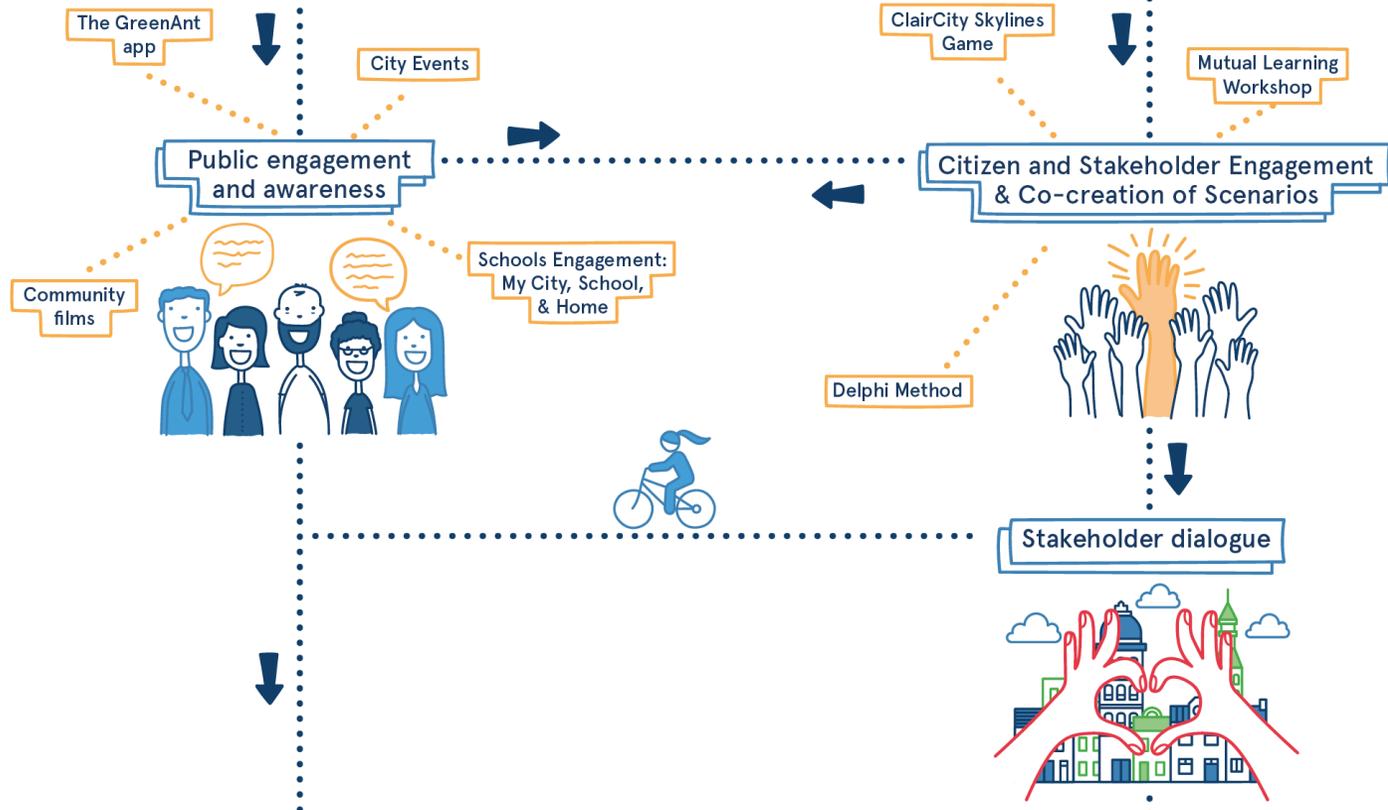

How the ClairCity process engages with a city & its citizens

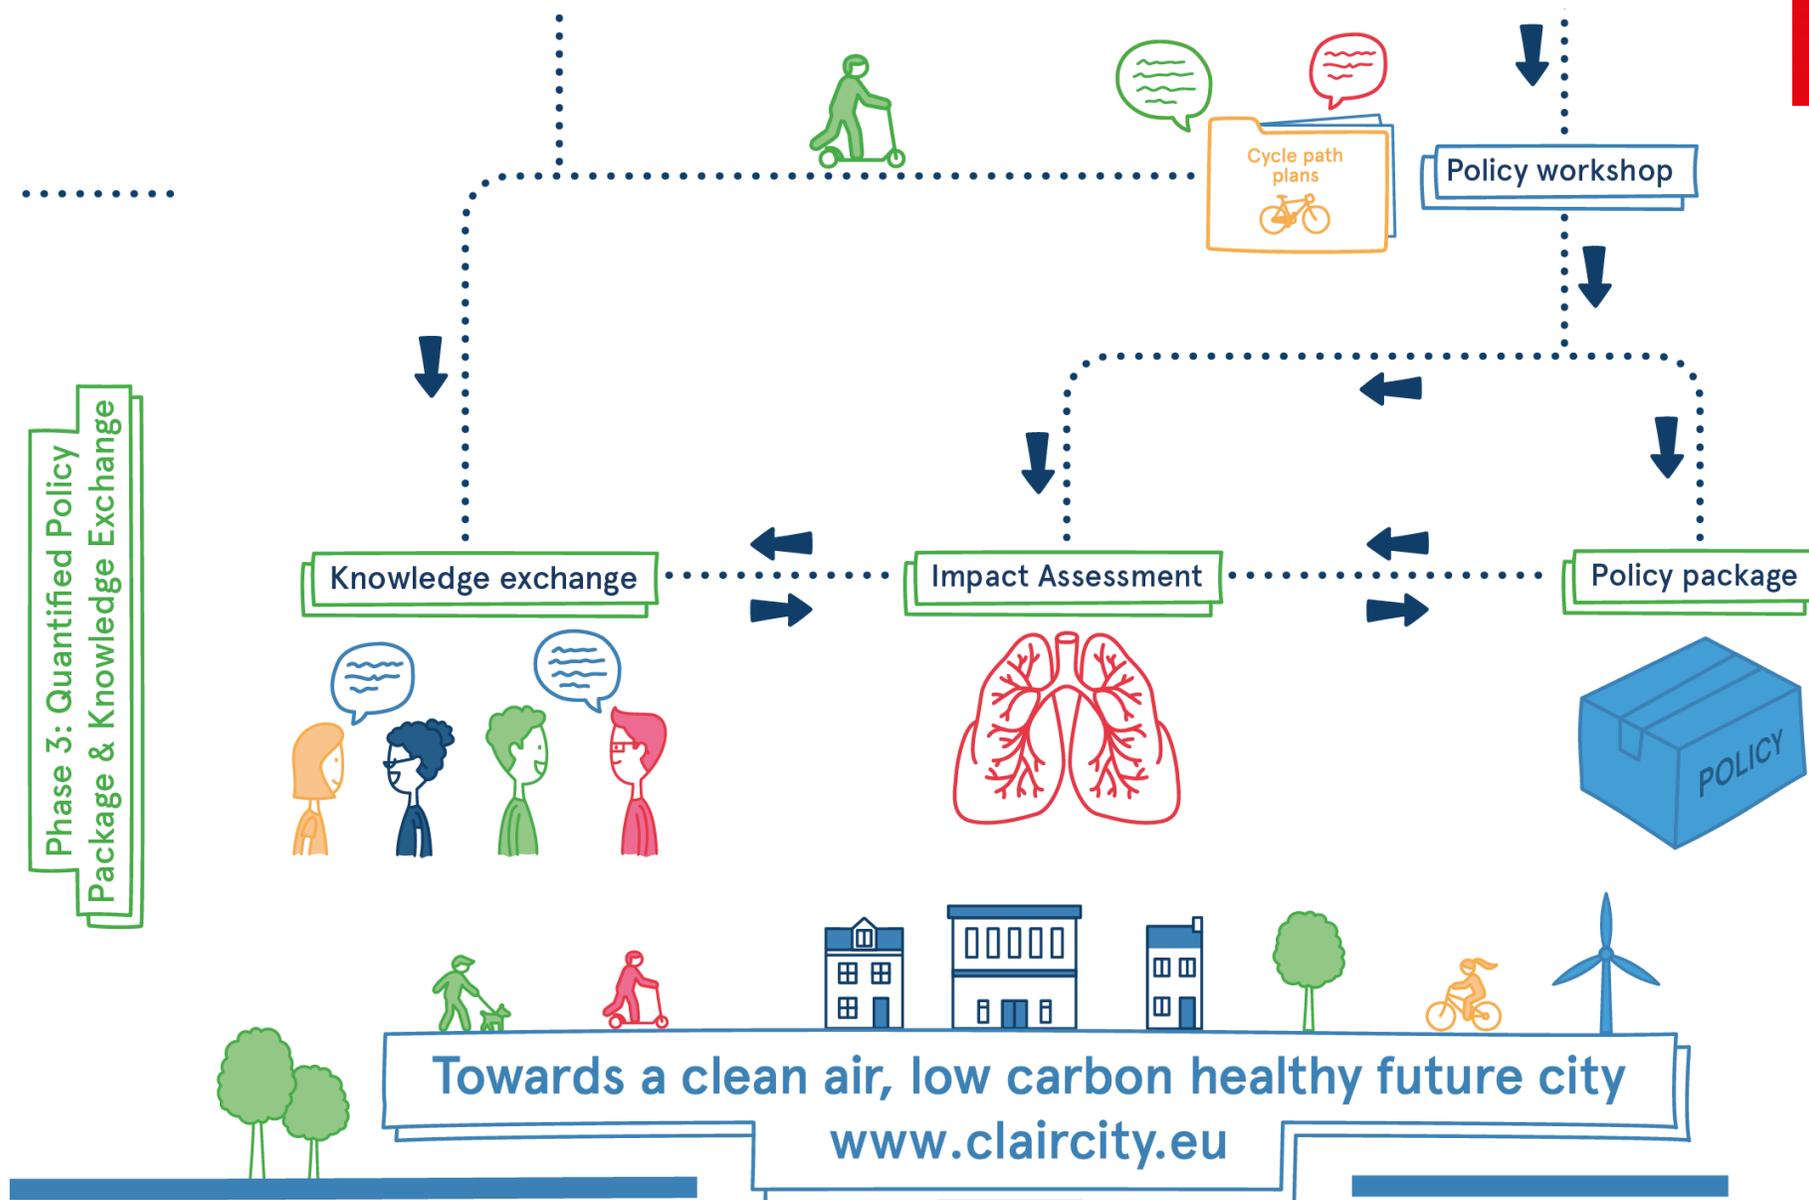

Phase 1: Establish the Baseline Evidence

Phase 2: Citizen and Stakeholder Engagement & Co-creation of Scenarios

Top 5 Policies (16-34 year olds)

- Keep separate ticketing systems for all transport types
- Make property developers consider air pollution & climate change
- Ban bonfires
- Don't build new nuclear power stations to replace coal
- Build cycle superhighway lanes in the city

How does the place you live make you feel?
What would you improve?

What young people prioritised

Citywide, transport and air quality the 2nd most important priority

“We wish for cleaner, greener public transport”

BUDGET LEFT: [10 coins] | **SAVINGS:** [Shopping basket icon] **CHECKOUT** [Info icon]

TAKE THE HEALTHY CITY PLEDGE | **ABOUT THIS PROJECT**

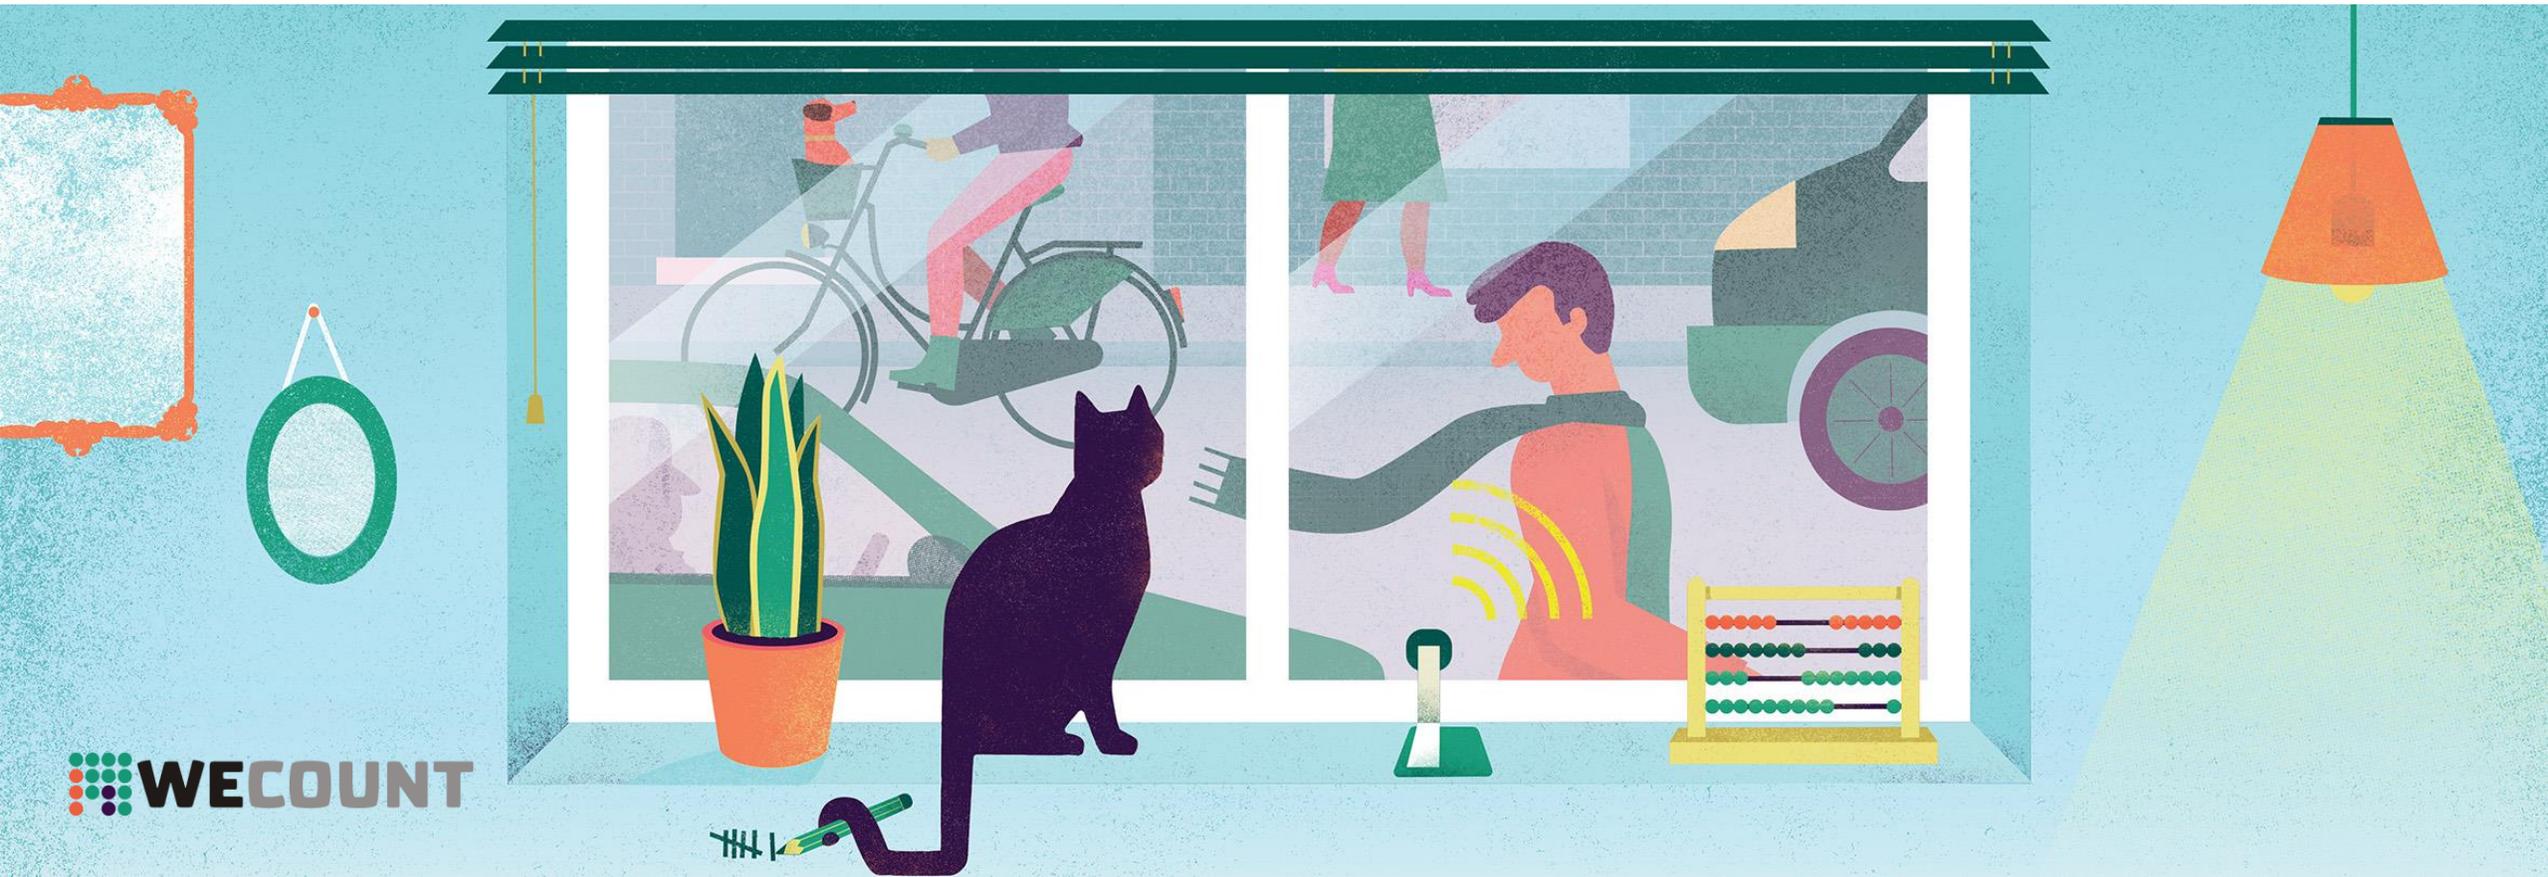

What we learnt...

- **Multi-channel** communication and **Intergenerational** activities
- Centering engagements around **food** helps discussion of systemic issues
- Build **lasting relationships** with community organisers; invest in time and people
- People mostly already know what they'd like to improve about a local area – but **views diverge more the further they are away from their 'place'** (home, street, neighbourhood, city...)
- People often feel 'done to' but this project has shown that **residents can lead the change**. Having their voice heard, and co-design were essential ingredients.

Citizens observing urban transport

Citizens observing urban transport

A European project that enables citizens to initiate a policy-making process using traffic sensors.

- 5 cities across Europe
- 100s of sensors installed in private homes... and soon schools
- Driven by participants agenda (Rat running, roadworks, cycling infrastructure...)
- Citizen and stakeholders collect, analyse and take action based on the data
- Schools resources in development

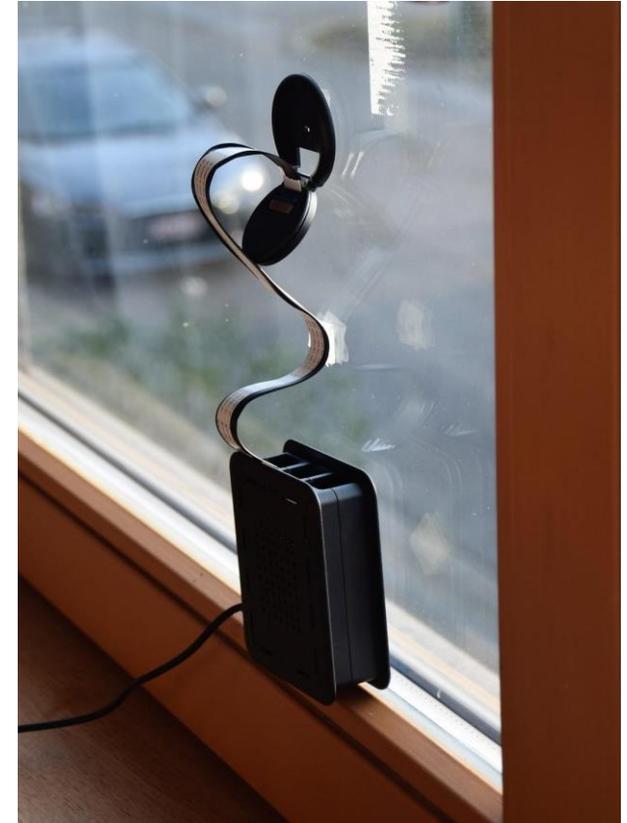

How it works (in theory)

A Telraam sensor is placed in an upstairs window with a clear view of the road.

The sensor, via an algorithm in a Raspberry Pi, counts cars, large vehicles, cyclists, pedestrians and can also assess car speeds.

The data is open access and can be viewed on the sensor data dashboard.

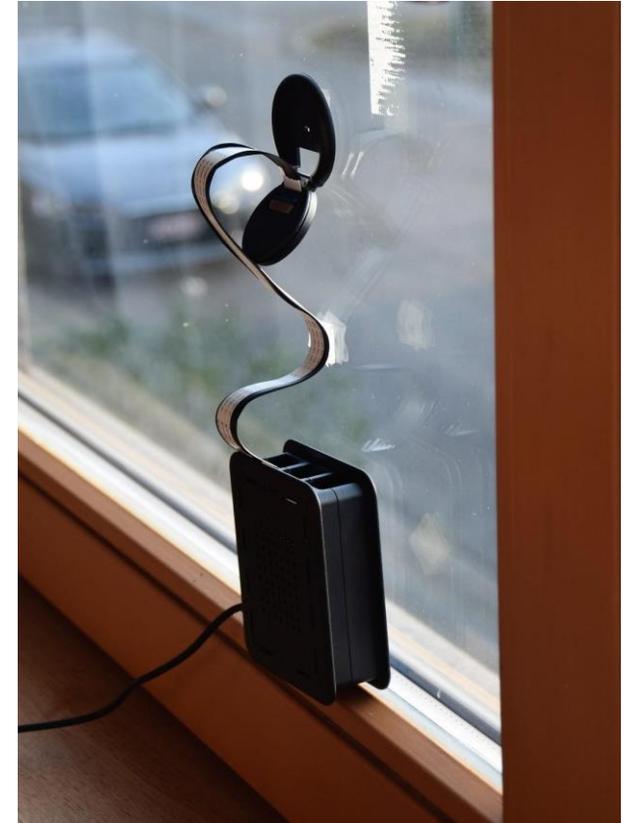

How it works (in practice)

Each window is different...

Stops counting in the dark

Technical glitches. Raspberry PI – you love it or you hate it

Double counting

WeCount in schools

WeCount-DETI collaboration

- An educational tool for STEM engagement
- Interesting datasets for data analysis
- Critical debates on the use and potential of technology for sustainable development
