Consent to Obtain Medication History

Patient medication history is a list of prescription medicines that our practice provider, or other providers, have prescribed for you. A variety of sources, including pharmacies and health insurers, contribute to the collection of this history.

The collected information is stored in the practice electronic medical record system (EMR/EHR) and becomes part of your personal medical record. Medication history is very important in helping healthcare providers treat your symptoms and/or illness properly and in avoiding potentially dangerous drug interactions.

It is very important that you and your provider discuss all your medications in order to ensure that your recorded medication history is 100% accurate. Some pharmacies do not make drug history information available, and your drug history might not include medications purchased without using your health insurance. Please also note that over the counter drugs, medications, supplements, or herbal remedies that patients take on their own may not be included.

By signing this consent for you are giving your healthcare provider(s) permission to collect and giving your pharmacy(ies) and your health insurer permission to disclose information about your prescriptions that have been filled at any pharmacy or covered by any health plan. This includes prescription medications to treat HIV/AIDS and medicines used to treat mental health issues such as depression.

I give my permission to allow my healthcare provider to obtain my medication history from my pharmacy, my health plan(s), and my other healthcare providers.
