EQUINE Umbilical Cord Banking

The Once-in-a-Lifetime Opportunity!

- Equine Tissue Bank protects every foal's future every day.
- We do this by collecting cells from the foal's umbilical cord at birth and preserving these cells for future therapeutic use in a constant, frozen state.
- This results in many millions of cells being made readily available at a time of injury throughout the horse's lifetime.
- This procedure far surpasses the other "invasive options" when cells are required to promote faster healing. A Certificate of Analysis is provided.

Equine cell banking wins hands down every time - there is no comparison!

Prepare now to collect the umbilical cord of every foal born in 2022!
