Stardew valley junimo hut setup. Stardew valley junimo hut quality sprinkler layout. Stardew valley junimo hut layout iridium sprinkler.

Hello! In the following lines, you will get the opportunity to learn how to create a superbly efficient Stardew Valley Junimo Hut layout. Thanks to few simple steps you can enjoy the benefits of Junimo Hut and increase your profit. For those who don’t know, you can unlock Junimo Hut later in the game. Its purpose is to automate crops picking. The dimensions of the Hut are 17×17. It is massive and very useful, but to get the most out of its space, you will have to plan things upfront. After you have placed Junimo Hut, create some space around it. You want to allow Junimos to have space to work on the farm. Ideally, you should make 5×5 square space around the Hut. On each of four corners of that space, place one scarecrow. Not only will you save space, but you will also protect each of your crops. When you do that, replicate sprinkler 5×5 squares all across the farm. Furthermore, to make the layout easier to walk around, add paths around the huts and sprinkler square spaces. This layout is not only very nice to look at, but it is also very practical and profitable. It provides you with 192 crops. Another important thing to note is – the quality of the crops will only depend on your farming level. Therefore, even if Junimos are harvesting the crops it will be as if you were doing it. Finally, you will not gain any farming experience points. Junimos can help you to earn more while working less. They are a typical example of outsourcing. Therefore, the right layout can help you a lot on your farming journey. If we had to explain what that „perfect“ layout is in one word it would be: minimalistic. Create enough space for Junimos to work around the farm, place both sprinklers and scarecrows smartly, and for your easier orientation create paths around crop areas. Welcome, fellow farmers! Today, we’re diving headfirst into the world of Junimo Huts in Stardew Valley. We’ve all been there, dreaming of an efficient and well-designed farm, but how do we achieve it? Well, look no further. We’ve got you covered with the ultimate Junimo Hut layout guide! Grab your watering can and let’s get started.So, first things first: what is a Junimo Hut in Stardew Valley? These magical little buildings are home to the adorable Junimos, who are here to make your life as a farmer so much easier.

Once you’ve got a Junimo Hut on your farm, these little sprites will automatically harvest crops within a specific radius, giving you more time to focus on other aspects of your farm life.To unlock the Junimo Hut, you’ll need to complete the Wizard’s questline, which starts with a visit to his tower in the Cindersap Forest. Once you’ve built some trust with the mystical man, he’ll teach you how to craft a Junimo Hut for a price of 20,000g, 200 stone, 9 starfruit, and 100 fiber.As we’ve mentioned, the main perk of having a Junimo Hut is the auto-harvesting feature, but there’s more to it than just that. With the right layout, you can maximize your farm’s efficiency, ensuring that your crops are harvested quickly and your profits soar.See also Tailoring Guide For Stardew Valley - Dress To ImpressThe key to the perfect Junimo Hut layout is understanding their range. Each hut can cover an area of 17×17 tiles, with the hut smack in the middle. This means that each Junimo Hut can tend to a whopping 289 tiles, so you’ll want to make sure you’re utilizing their full potential.Now that we’ve got the basics down, it’s time to get creative and build our dream Junimo Hut layout. Here are some tips to get you started:To make the most of your Junimo Huts, start by dividing your farm into a grid, with each square measuring 17×17 tiles. This will give you a clear visual representation of where to place your huts for maximum coverage.Now that your grid is set, find the center of each square and place your Junimo Huts there. This ensures that they can cover the entire area within the square, maximizing their harvesting potential.When planning your Junimo Hut layout, keep in mind the growth times and quality of your crops. Fast-growing crops, like Parsnips, might be better suited for manual harvesting, as the Junimos won’t have time to keep up. On the other hand, slower-growing crops like pumpkins and melons are perfect for the Junimos, giving them plenty of time to harvest and allowing you to focus on other tasks.While the Junimos are hard at work harvesting your crops, don’t forget about the other elements of your farm. Make sure to place sprinklers and scarecrows strategically around your Junimo Huts to keep your crops watered and safe from pesky crows.See also How to Get Pearls in Stardew Valley: A Comprehensive GuideFinally, don’t forget to upgrade your Junimo Huts! As you progress through the game, you’ll have the opportunity to upgrade the huts, increasing their efficiency and harvesting speed. Keep an eye out for these opportunities and invest in your Junimos for a smoother farming experience.Now that you know the basics of designing a Junimo Hut layout, here are a couple of ideas to inspire you:The classic checkerboard layout consists of alternating Junimo Huts and crop squares, ensuring that every crop tile is within the reach of a Junimo. This layout is perfect for beginners, as it’s easy to set up and guarantees maximum coverage. Just remember to leave enough space for your sprinklers and scarecrows!For a more visually appealing layout, consider placing all your Junimo Huts in the center of your farm and surrounding them with crop squares. This creates a Junimo hub where your little helpers can quickly access all of your crops. This layout may require a bit more planning, but the result is a stunning and efficient farm design.If you’re feeling extra ambitious, try dividing your farm into four quadrants, each dedicated to a specific season. Place a Junimo Hut in the center of each quadrant and plant crops that thrive in that particular season. This way, you’ll have a visually appealing farm layout that changes with the seasons and keeps your Junimos busy year-round.With the perfect Junimo Hut layout, your Stardew Valley farm will be a thriving, efficient, and profitable masterpiece. Whether you’re a seasoned farmer or just starting out, embracing the Junimo life will undoubtedly make your farm life easier and more enjoyable.

So, get out there, place your huts, and watch your profits soar! Happy farming, fellow agriculturalists! From Stardew Valley WikiThe Junimo Hut is a type of building purchasable from the Wizard at the Wizard's Tower after finishing the Goblin Problem Quest, and returning the bottle of ink from the witches hut to the wizard. The hut houses Junimos, who live on the player's farm and harvest any fully-grown crops that are within the hut's vicinity. Harvesting A Junimo Hut will let out three Junimos every morning. Each Junimo will harvest crops by picking them one at a time until all nearby crops are harvested. The range of a hut is a 17x17 area centered on its doorway. This is 8 spaces in each direction, but the building's footprint covers one space to each side and above. This means that each junimo hut covers a total of 289 tiles, or 283 counting the hut’s footprint. Junimos will not collect crops in the rain. Junimos continue to gather while you're not at the farm, however if you end the day before they finish gathering then the remaining crops within the vicinity of the hut are not automatically retrieved. Junimos stop gathering at 7:10pm and when you attend a festival. If the entrance to the hut is obstructed, the Junimos may be unable to gather crops. Junimo harvesting can be turned off by clicking on the Hut then clicking on the button depicting a green junimo harvesting a blueberry. If Junimos harvest a crop, the player will not gain any Farming experience points. The quality of crops is, however, affected by the player's Farming level, the same as if the player harvested the crops. Crops Junimos will not collect crops grown from Wild Seeds. They will collect flowers, plants requiring a scythe, and crops physically unreachable to the player because they're blocked by trellises. Players will not be able to plant seeds on a tile if a Junimo is standing on it.

Collection Players can retrieve crops from the hut whenever they'd like. A bag tied with a purple ribbon outside of the hut indicates that there are crops available for collection to the player, and it disappears after all goods are collected. This bag holds up to 36 items, and behaves as though it were a Chest, in that players may take out or put things into it. If all 36 spaces in the bag are filled, the crops that the Junimos harvest will be dropped on the ground. Notes It's not necessary to have 9 Starfruit of the same quality in order to build a Junimo Hut. The game will count the total number of Starfruit that you have in inventory. Junimos are inefficient harvesters and may not harvest all ready produce within their area in a single day.

Obstacles can also lower their efficiency. Secret Note #24 hints at a secret ability of Junimos in Junimo Huts. The appearance of the Junimo Hut changes based on the season. Junimos will not collect crops in winter. Junimos will not collect crops from Garden pot.

Gallery A Junimo harvesting a Pumpkin. Using a Junimo Hut for Trellis Crops. Junimo Hut in Spring, Summer, Fall, and Winter Bugs If the player harvests a crop at the same time as a Junimo, it will softlock the game. History 1.1: Introduced. 1.4: Added functionality hinted at in Secret Note #24. 1.5.2: Fixed Junimos not harvesting crops if you spent the night on the island or when you're not physically present.
