

SUPER SHADE LS™

30% Creeping Red Fescue

20% Chewing Fescue

10% POA Trivialis

40% Slider LS™ Perennial Ryegrass

Mixture for medium-heavily shaded areas

THE COMPOSITION OF SUPER SHADE LS

The mix contains seeds of shade tolerant and hardy grasses: 30% Creeping Red Fescue, 20% Chewing Fescue, 10% Poa Trivialis, and 40% of Slider LS Perennial Ryegrass.

This composition of the grass seed mix ensures not only dense shade tolerance, but also high turf quality, Lateral Spread™ ability, and top rated wear tolerance of the grass. This dense and fine-bladed turf recovers in highly used areas much quicker than other shady grasses.

LATERAL SPREAD LAWN SEED MIXTURES

Lateral Spread lawn mixtures have a spreading tiller which fills in bare spots fast for increasing density to prevent possible weed pressures. These mixtures are fine leaved and dark green in colour. Each mix is custom designed making our seed company the only ones with this technology in Eastern Canada.

APPLICATION:

- Apply at a rate of 5-7 lbs/1000 sq ft
- Optimal overseeding application time is early spring or fall
- Good germination depends on adequate moisture and good seed to soil contact.
