

Huntress Security Operations Center

Your secret weapon in the fight against hackers.

Bring cyber expertise to your team

The Huntress SOC fills a critical gap in your security stack, providing you with a team of cybersecurity professionals who can hunt alongside your existing team. Our threat analysts look into potential threats, analyze hacker tradecraft, create incident reports, and provide a degree of analysis and expertise that software-only solutions simply can't match.

24/7 threat monitoring

Our global SOC team hunts, detects, and responds to threats—even while you sleep. With analysts located in the US, UK, and Australia, we're providing 24/7 threat monitoring; because hackers don't work 9-5, and neither do we.

Intelligence that isn't artificial

Huntress' SOC analysts aren't just responding to active incidents—we proactively hunt for potential exposures, notifying users about new vulnerabilities and identifying ways to help harden your security posture. Plus, the intelligence we gather is fed right back into the Huntress platform—so our software and our hunters are constantly getting smarter.

Key Features

Highly trained team of experts who understand exactly how hackers operate.

Actionable incident reports sent from our team with easy-to-understand analysis of threats and recommended remediation steps.

Around-the-clock threat monitoring and support from our cyber experts—day or night

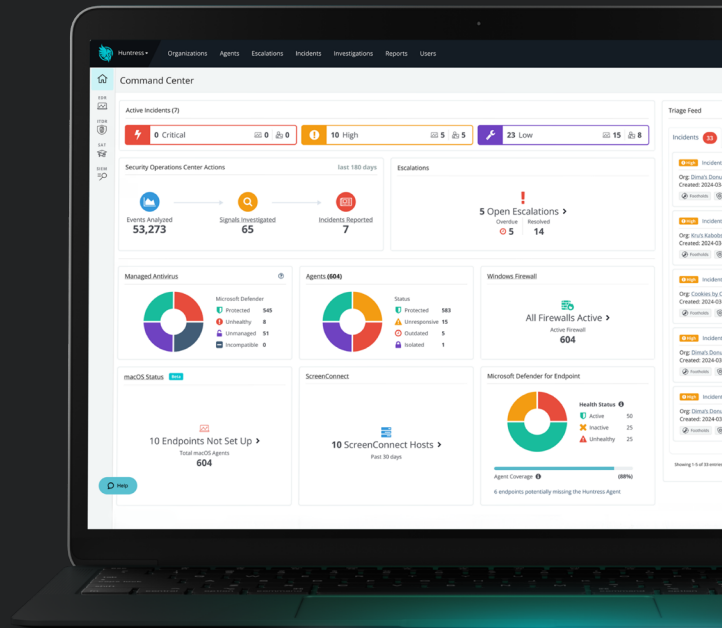

A unique combination of talent and technology that helps you find and expel threats that lead to breaches, ransomware, and more.

International coverage including North America, Australia, and the UK

The Huntress Managed Security Platform

The Huntress SOC is the backbone of the Huntress platform. Through our combination of automated threat detection and 24/7 SOC analysts, even the most advanced threat actors won't stand a chance against your defenses.

Managed EDR

With near real-time endpoint detection and response—backed by our 24/7 SOC—Huntress Managed EDR provides unparalleled endpoint visibility to weed out and stop cyberattacks as they happen. Detect, isolate, and remediate malicious threats across your endpoints, including persistent threats, antivirus evasion, ransomware, and more.

Managed ITDR

Managed detection and response (MDR) for threats against your Microsoft 365 environment, backed by Huntress' 24/7 SOC. Huntress MDR for Microsoft 365 enables you to protect employee identities and inboxes from stealthy threat actors, suspicious logins, and the rising threat of business email compromise (BEC) attacks.

Managed Security Awareness Training

Empower employees to become their own line of defense. Huntress Security Awareness Training delivers a powerful—and fun—combination of training episodes, assessments, phishing simulations, and reports to help employees become more cybersavvy in the fight against threat actors.

Managed SIEM

Huntress flips the script on the old SIEM model with a fresh approach that cuts out complexity, unpredictable pricing, and unnecessary data and alerts that drain budgets. Our team of experts and pioneering Smart Filtering technology streamline the SIEM lifecycle, with 24/7 threat monitoring, ease of compliance, and a transparent, predictable cost model.

Huntress SOC in Action

1

Collect

The Huntress agent looks for footholds and backdoors in startup folders, autoruns, scheduled tasks, and more—all the places hackers use to hide.

2

Analyze

We move beyond automated detection with contextually aware manual analysis. Our SOC team reviews endpoint and agent surveys to catch even the sneakiest threats.

3

Report

After investigating, we send you a custom incident report to share our findings and outline next steps. This can be delivered to you via email or your ticketing system.

4

Remediate

We move beyond automated detection with contextually aware manual analysis. Our SOC team reviews endpoint and agent surveys to catch even the sneakiest threats.

“

Huntress is changing how you look at SIEM. We've taken everything you hate and simplified it. That means no more complex management, no more surprise billing, and no unnecessary data or alerts that can drain your budget. With our team of experts and Smart Filtering working on your behalf, we're making the whole SIEM experience better for you—24/7 human-backed threat monitoring, streamlined compliance, and clear, straightforward pricing.

”

Chris Henderson
Senior Director of ThreatOps | Huntress

Don't face threats alone. Discover how our 24/7 SOC can help you fight back against today's hackers.
