

PCX was built to meet the most pressing needs of the process industry.

As a web-based solution, PCX offers users many advantages over the traditional pen and paper way of calibration management.

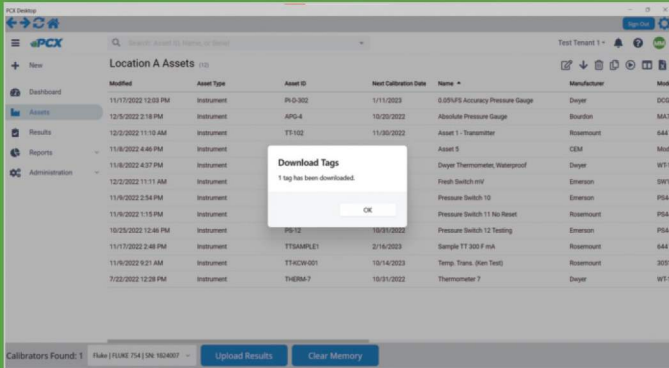

Out-of-Box Compatibility with Fluke Documenting Calibrators

- **Download Assets** to the calibrator for performing in the field.
- **Upload Results** to PCX for review or immediate reporting.
- **Pre-loaded sets of Calibrator Settings** make configuring your test specification for your Fluke calibrator a snap.
- **Calibrator Option Templates are preloaded** with hundreds of common combinations, for anything from HART TC transmitters for your 754, Manual Entry using your 753, to pneumatic pressure transmitter tests using your Fluke 729 and compatible pressure module.
- **Use convenient List Views** and filtering mechanisms to select Assets for download the same way you would select them for other PCX operations.
- **Enhanced workflows for Ad-Hoc Calibrations:**
 - A. **Make Commissioning of instruments easier** with automatic record creation via Upload from your Fluke Documenting Process Calibrator (DPC).
 - B. **Test Standards are created from your Calibrator** and pressure modules automatically via the upload process, making your calibration certificate that much easier to produce, with less manual data entry.

Cloud Data, Local Hardware

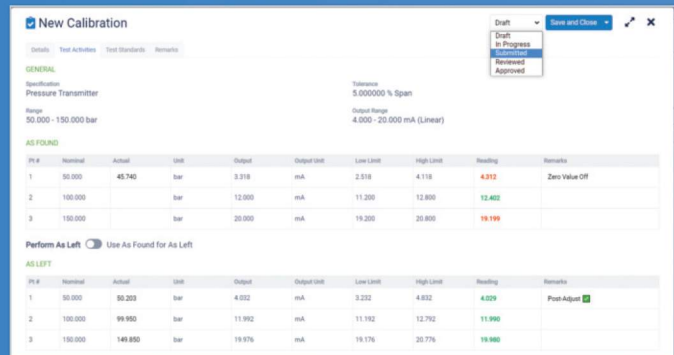

Communicating with documented calibrators

- **Web-based application** means you don't need to install specialized software on a machine.
- **Access your account from any device** that has a web browser and active internet connection.
- No local storage allows you to **not have to worry about backup** or restorations.
- **PCX Desktop local installation provides the conduit** for your locally connected calibrator.
- **Connect your Fluke 753, 754 or 729** to manage downloads and uploads from your PCX subscription online.

Increase Productivity: Less Time Implementing, More Time Calibrating

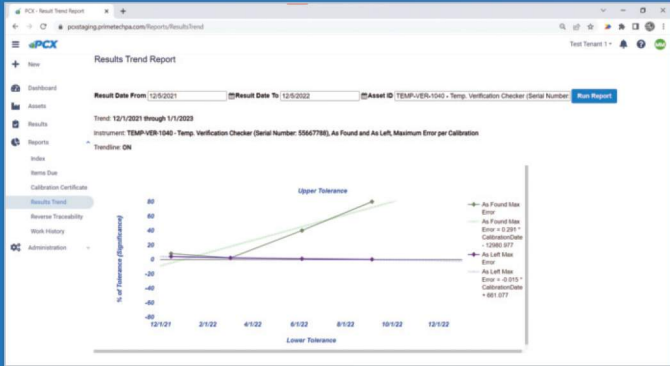

- **Modern, intuitive interface** means there is a smaller learning curve for your team.
- **Home screen dashboard** provides a high-level look at key data and can be designed by user role.
- **Easily create large amounts of Asset records** with the built-in import tool.
- The **UI provides hints and tips automatically** by hovering over an icon; no need to search the instruction manual.
- **Online Help Center is available** with answers to the most asked questions.
- **Unlimited file attachments** in order to support external certificates, asset spec documents, or procedural info.

Calibration entry designed to give instant feedback

Gain Insights with Comprehensive Reporting Functionality

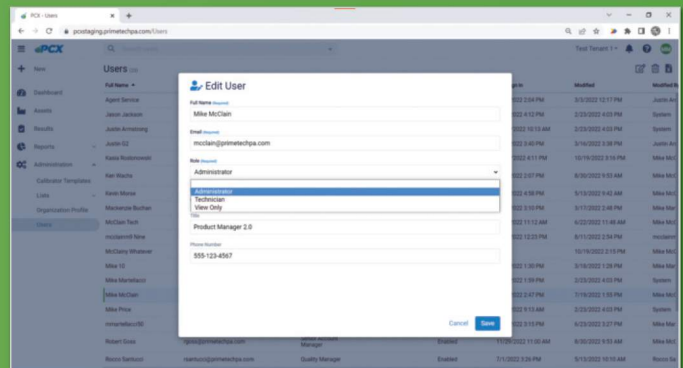

- View year-over-year calibration trends to gauge performance.
- Easily access Calibration Certificates with just one click from the searchable, sortable Results list.
- Report on Results as well as Asset schedules via browser with standard Reports.
- All your critical reports come standard including Reverse Traceability.
- Export filtered List Views for more self-service reporting capabilities.

Trend measurements to predict out-of-tolerance conditions

Operate with Full Confidence Knowing Your Data is Secure

- All application updates and upgrades are included in your subscription.
- Secured storage of all Assets and Records data.
- Leading cloud providers are utilized to backup up data daily.
- Backups are automated and automatically scale as data grows with use.

Control user access with simplified administration
