

Integration Suite

WebTMA's Integration Suite offering gives maintenance teams the ability to **maximize their output by leveraging a combination of APIs and Universal Interfaces.**

WebTMA's Platform APIs now give users ultimate flexibility to integrate with other systems. These provide end-to-end visibility and consolidated management of their operations. APIs are a seamless way for two software programs to communicate with one another.

The Universal Interfaces suite consists of a variety of modules that bring complex technologies together to maximize compatibility, interoperability, and enterprise-wide information management. Simplify overall integration efforts with standard connection points for enterprise data.

With TMA's Integration Suite packages, users are able to choose the package that best fits their current needs and can scale with their organization. The packages are configured to benefit facility teams and overall organizational efficiency with increased data accuracy.

API + UI

Integration Suite – APIs and one Universal Interface

API + 2 UIs

Integration Suite – APIs and two Universal Interfaces

API + unlimited UIs

Integration Suite – APIs with unlimited Universal Interfaces

The Interfaces

Universal Financial Interface

Integrate your entire enterprise accounting system and processes into WebTMA with ease.

Universal Procurement Interface

Streamline your procurement processes with WebTMA's through this intuitive integration tool.

Universal Interface for Fuel & Oil

Keep fuel and oil costs accessible with this specialized WebTMA interface.

Universal Interface for Space Management

Manage your facilities spatial data with WebTMA's space management interface integration tool.

Universal Interface for Other Charges

Import Other Charges data onto Work Orders to capture and analyze the total cost of maintenance.

Universal Interface for HR

Automate the transmittal of HR data to ensure your HR / ERP is in sync with WebTMA.

Building Automation System

Import alarm, alert data, and runtime to automatically create corresponding work requests within WebTMA, update equipment meters, and automate PM generation.

The Benefits

Seamless connectivity across your operations

Accurate, real-time maintenance data exchange between platforms

Scalable packages to choose integrations and APIs to fit your specific needs

Enterprise-wide reporting to enhance visibility across Operations

Eliminate manual and erroneous data entry with integration tools

Accelerate workflows with user-defined templates and configurations for your enterprise systems

Safeguard the security and integrity of your data via proven integration methodologies

Discover how WebTMA can transform your organization.
