Mobile Solutions

Complete inspections and carry out work orders and PMs with ease from your Android and iOS mobile devices

In today's digital era, the mobile device is a tool with truly limitless applications. The ability to communicate and complete complex tasks while on the move is transformative both personally and professionally, with enterprises harnessing mobile technology to enhance their operations. For employees, managers and operators who are away from their workstations, mobile accessibility is crucial when staying up-to-date on the status of their assets.

Mobile CMMS solutions empower maintenance teams to remain agile and aligned with their colleagues while in the field. Years of research and development have proven a positive evolution for mobile technology and enterprises can leverage that advanced technology to streamline their processes.

Mobile interfaces for enterprise asset management and CMMS ensures organizations can remain proactive from anywhere at anytime.

TMA's mobile solutions provide businesses with the ability to operate in an online or offline mode while technicians are on the move. When online, the module transmits data directly to the WebTMA database in real-time. When offline, data is stored locally on the device which automatically synchronizes to the WebTMA database once an online connection is available.

This module allows technicians and directors unparalleled flexibility and visibility, able to safely and accurately assess the state of enterprise assets from anywhere. Work orders can be generated and filled by technicians and inspections can be completed easily on both Android and iOS devices.

The Features

QR and Barcode Scanning
Compatible devices with high-resolution cameras can take advantage of scanning capabilities associated to an enterprise's system supported assets.

Simplified User Interfaces
Access detailed checklists and PM task sheets to prevent your administrators from missing key steps on work orders or PMs.

Work Order Generation
Create new work orders and requests on your device, download assigned work orders/requests and PMs, view them by priority, and upload them to WebTMA.

Automatic Corrective Measures
Generate corrective work orders automatically and determine failed data transfers from on-screen warning icons.

The Benefits

Online and offline modes allow for easy collaboration and an accurate data source

Perform a variety of inspections directly from your device

Access work orders and project progress from anywhere, anytime

Maximum flexibility with iOS and Android compatibility

Improve overall enterprise productivity through streamlined management of labor, assets, and greater data accuracy – anytime, anywhere

Eliminate paper and move to more sustainable processes with paperless options

Discover how WebTMA can transform your organization.
