

# Universal Interfaces

Quick and intuitive WebTMA integration for your enterprise applications with a **suite of innovative and reliable tools**

When integrating new frameworks with existing enterprise hardware, accessibility can often be a challenge. The complex operating formats of several applications can be daunting to face for end-users who are overwhelmed by the sheer multitude of processes.

Eliminating this complexity requires the use of **intuitive & simplified user interfaces** that can convey easily digestible core data, while also ensuring that end-users can manage their applications with ease.

**Universal interfaces that can suit a wide range of industries and enterprise applications are the cornerstone of a successful integration and management strategy.**

TMA Systems' Universal Interfaces allow enterprises to integrate WebTMA with a variety of enterprise applications including:

**Financial systems**

**Space management systems**

**Procurement applications**

**Building Automation systems** and more.

The Universal Interfaces suite consists of a variety of modules that bring complex technologies together to maximize compatibility, interoperability, and enterprise-wide information management. They are designed to improve efficiency by eliminating manual and duplicate data entry, increase data accuracy through the electronic transmission of data, and simplify your overall integration efforts by providing standard connection points for your enterprise data.

## The Interfaces

### Universal Financial Interface

Integrate your entire enterprise accounting system into WebTMA with ease.

### Universal Procurement Interface

Streamline your procurement processes with WebTMA's through this intuitive integration tool.

### Universal Interface for Space Management

Manage your facilities efficiently with WebTMA's space management interface.integration tool.

### Universal Interface for HR

Bring your HR data in line with WebTMA through this interface solution.

### Universal Interface for Fuel & Oil

Keep fuel and oil costs accessible with this specialized WebTMA interface.

### Universal Interface for Other Charges

Track, analyze, and manage all your other charges on WebTMA with this practical interface.

### Building Automation System

Import alarm, alert data, and runtime to automatically create corresponding work requests within WebTMA, update equipment meters, and automate PM generation.

## The Benefits

Improve efficiency and increase accuracy of your accounting processes

Accelerate workflows with user-defined templates and configurations for your various enterprise systems

Eliminate manual and duplicate data entries

Capture the "total" cost of your enterprise's work orders from external sources and have them easily accessible on WebTMA

Simplify your overall enterprise integration efforts with pre-built, user-configurable designs

Input fuel and oil costs to easily monitor, analyze, and budget fuel and energy consumption and associated costs

Easily track personnel data, time and labor, and leave accrual

Discover how WebTMA can transform your organization.
