# WebTMA Direct Database Connect

Organizations need to make data-driven decisions. Do you want the ease of data access that on-premise provides without the costs and hassle of managing an on-premise solution?

Business intelligence tools enhance an organization's ability to cull raw, unstructured data, organize it and draw conclusions from it. Through analytics and reporting processes, teams can create dashboards and use the data to reference enterprise-wide successes and areas for improvement.

However, Business Intelligence tools are nothing without he data to drive them. WebTMA's Direct Database Connect solution is the bridge linking your WebTMA data, hosted securely in the Azure cloud, to your favorite BI tools. This provides access to the most up-to-date information empowering your team to make more informed organizational decisions.

Cloud-based CMMS (original data source) → Direct Database Connect (access point to data source) → Reporting and Analytics (using additional BI tools)

By leveraging your organization's existing business intelligence tools and Direct Database Connect, you can quickly transform your facilities related data into actionable information. Evaluate strategic processes, budget projections and more through reports and dashboards built with the tools already in use by your organization and forego having to learn software specific reporting tools.

With Direct Database Connect, you have direct access to almost 500 easy to understand database views. Easy to set up and secured with industry leading tools offered by the Azure Cloud, we work with your network security team to whitelist specific IP addresses that can access the data. Once the setup is complete, you can start to develop reports just like if WebTMA was running on servers in your own data center. Data drives decision making. Let WebTMA's Direct Database Connect solution help your team take intelligent insights and make strategic, informed decisions.

The Benefits

Real-time data (not based on database copies created nightly)

Delivered from a read-only replica of your production database so you never have to worry about impacting end user performance

Flexibility to use existing BI tools in tandem with Direct Database Connect

Save time with easy, reliable access to relevant data

Agile and dynamic decision-making

Greater ROI and IT infrastructure building

Discover how WebTMA can transform your organization.
