

Advantages of OSIRIS-SF Semi-Flush Semi-Premium Connection

A high-quality, cost-effective semi-flush semi-premium connection designed to meet the demands of the most rigorous applications. With exceptional torque capacity and remarkable compression resistance, it ensures reliability, durability, and efficiency in even the most challenging environments.

*Available in sizes
4 1/2" to 7 5/8"
All grades*

Features

- This connection applies a dovetail thread form which allows superior torque strength over a standard thread form.
- The expanded box provides clearance optimization, that reduces drag in tight formations compared to a standard coupling diameter.
- The Osiris-SF thread design enables deep stabbing, ensuring rapid makeup with minimal risk of cross-threading.
- The efficiency of the dovetail threads structural capabilities allow for various applications in the field.

- Tension efficiency greater than 90%, ensuring reliable load-bearing capacity and structural integrity in demanding applications.
- Compression efficiency at 100%.
- Unparalleled torque in reserve for rotating downhole.
- Exceptional bending capabilities, providing enhanced flexibility in challenging downhole conditions.

Applications

- Horizontal & Extended Reach Wells
- Drilling with Casing
- Production Casing, Tiebacks & Liners
- Intermediate Casing
- CRA Applications
- Shale Applications
- O.D. restricted areas
