

Case Study:

Fisherbrand™ Lab Furnishings

Enhancing Research Spaces at the University of Texas at Austin

Fisherbrand Lab Furniture, a division of Fisher Scientific, partnered with the University of Texas at Austin to modernize several laboratory and research spaces within Patterson Labs and the Engineering Teaching Center (ETC). Our work at Patterson Labs focused on supporting the Department of Integrative Biology, delivering high-quality lab furniture solutions to accommodate state-of-the-art research facilities.

The Patterson Labs renovations included four distinct projects, each designed to enhance functionality and aesthetics in laboratories studying organisms, molecules, and computational biology. This collaboration ensures a cohesive environment that meets the diverse needs of researchers, students, and faculty.

In the Engineering Teaching Center, the Fisherbrand Lab Furniture Team provided a combination of customized furniture and quick-ship solutions. Beyond large-scale projects, we also addressed specialized needs, such as sink replacements and custom table configurations. These efforts underscore our commitment to flexibility and precision in supporting the ever-evolving requirements of advanced STEM programs.

With extensive experience in life sciences and engineering renovations, Fisherbrand Lab Furniture continues to deliver tailored solutions, seamlessly balancing speed and customization to meet the unique demands of higher education institutions.
