

RELEASE 3/29/26

Properly Works Launches Easy Dash with Lease Program to Help Manufacturers Improve Performance Without Upfront Capital Investment

An interactive workstation and flexible financing enable small and medium size manufacturers to digitize operations, improve quality, and begin automation immediately

Buffalo, NY- Properly Works announced the launch of Easy Dash, an interactive workstation designed to help manufacturers capture production data, guide operators, and bridge the gap between manual processes and full automation. Easy Dash is now available through a lease program that removes upfront cost barriers and accelerates adoption.

Manufacturers face growing pressure to improve productivity, maintain quality, and address labor shortages. Many still rely on manual inspection and paper-based tracking, which can consume 20 to 30 percent of labor capacity while limiting visibility and consistency.

Easy Dash provides a practical first step into automation by combining digital data collection, operator-guided workflows, and system integration in a flexible, easy-to-deploy platform. With predictable monthly payments, companies can align cost with value while avoiding large capital expenditures.

Flexible System Architecture

Easy Dash scales from a single workstation to a connected factory system:

- **Giga** 15-inch touchscreen for full-featured workstations
- **Mega** 10-inch touchscreen for compact applications
- **Nodes** 10-inch add-ons that connect stations into a unified system

This modular approach allows manufacturers to start small and expand over time.

Built for Integration

Easy Dash connects equipment and standardizes processes through seamless integration with:

- Vision systems for repeatable inspection
- Laser distance sensors for precise detection and faster cycle times
- Industrial and collaborative robots for flexible automation

- Digital micrometers and calipers for direct data transfer and improved accuracy

Key Capabilities and Outcomes

Easy Dash enables manufacturers to capture real-time data, standardize workflows, integrate with PLC, ERP, and quality systems, and support high-mix production environments.

As a result, companies can reduce manual inspection time, improve quality consistency, accelerate training, and gain real-time visibility into production performance.

Lowering the Barrier to Automation

The lease program accelerates adoption by eliminating large upfront approvals, enabling operating budget investment, speeding deployment, and aligning cost with measurable improvements.

“Too many manufacturers know they need to improve their processes but get stuck on the upfront investment,” said Dominic Myers, President of Properly Works. “Easy Dash, combined with our lease program, allows companies to take immediate action and improve performance without delay.”

Easy Dash is already in use across inspection, assembly, and data collection applications. To learn more or schedule a demonstration, visit <https://properlyworks.com/bookings>.

About Properly Works

Properly Works is a Buffalo, NY-based automation integrator specializing in robotics, inspection systems, material handling, and industrial interfaces. The company delivers practical, scalable solutions focused on measurement, control, and automation.
