- **Budget Templates and Drivers**

Analysis Features

- Consolidate multiple entities or structures
- Multiple currencies

Reporting Features

- Month-end close
- P&L Reporting
- Cash Flow Reporting
- Balance Sheet Reporting

PowerAnalytics

YOUR PROBLEMS AND OUR SOLUTION

PAIN POINT 	TYPICAL CONSEQUENCES	HOW POWERANALYTICS HELPS
Months of setup before any useful reporting	Delayed decision making, business opportunities missed, leadership frustrated	→ Deploys fast, pre-configured models and instant financial reports from day one
Spreadsheet chaos: many versions, wrong numbers, conflicting data	Wasted time reconciling, errors, loss of trust in the numbers	→ Using Excel with an in-memory engine + a single consolidated data source reduces versioning errors
Multiple systems, currencies, charts of accounts that don't match	Chaos in consolidation, manual mapping, data drift	→ Automatically maps data, handles multi-company & multi-currency data
Staff burnout from constantly copying & pasting, manual data loads, "Excel Hell"	Slow reporting cycles, people hate doing reporting, high error risk	→ On-demand data refresh, less manual drudgery
Expensive BI and analytics tools that require training, onboarding, consulting, big implementation projects	Big up-front cost, delays, software that nobody uses correctly	→ Packaged, familiar, designed for ease and speed

Get started as low as \$875/month

Rapidly produce financial statements with **hyperflexibility**.
