

Advanced MRP

Precise Control Over Your MRP Explosion

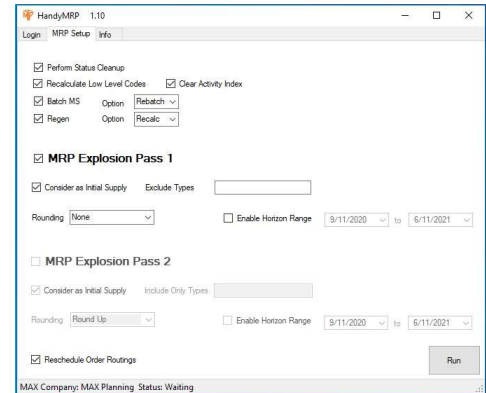

Your Material Requirements Planning (MRP) process is a critical element in the creation of an accurate, stable, and realistic plan that provides your operations team a chance for success. MRP needs to run, completely, without error, so you know plans are accurate.

Advanced MRP guarantees that:

- Bills of material loops and/or out of range dates are handled, as are invalid order policy conditions.
- Nine possible data conditions (unequal order status codes, open orders with zero quantity, etc.) fixed.
- Command line credentials stay secure.
- Each MRP step is reported as successful, or not.
- Allows for MRP explosion to be run in two passes based upon Part Type Codes (optional).
 - Run make and buy parts with different initial supply flag, different horizons, or different rounding options.
- Your MRP process results are well documented.
- You know an error occurred as it happens (requires **KnowledgeSync Alerts & Automation**).

Choose the options for your specific MRP needs.

Easy to use user interface prompts for the command line processes and acceptable configuration variables.

Why Advanced MRP?

- Two pass MRP.
- Multiple company MRP.
- Automatic data repair.
- Data violation reporting (non-repairable).
- Error checking, pass/fail reporting & notification.
- Custom reporting.

CL² = Command Line to the second power: Run this application that creates a command line as a command line!
