

How To: iNaturalist

Friends of South Shore

Presentation by: Jessica Daze

What is Citizen Science?

- Public participation/ collaboration
- Share/contribute to data monitoring and collection programs of all different types
- Anyone can do it!
- Variety of programs
- Accessible through technology

Fun Fact!

- One of the oldest examples of Citizen Science is the Christmas Bird Count!
- 1900
- A wildlife census informing bird conservation efforts
- A holiday tradition for a lot of birders

Why is Citizen/Community Science Important?

- Collaboration with community groups, local knowledge, collective action and empowerment
- It helps to improve conservation, livelihood and governance outcomes,
- It links ecosystem-based management and environmental sustainability
- Social learning with external, internal or hired expertise.

Citizen Science at the Tip of Your Fingers!

- Technology makes Citizen Science accessible
- So many amazing examples of Citizen Science platforms
- Including iNaturalist

What is iNaturalist?

- Online, social network for sharing biodiversity information
- Crowdsourcing Species identification/organism recording tool
- Helps people to learn more about biodiversity and species
- Record your own observations, get help with ID's, collaborate with others, access observations made by others.

Why is iNaturalist Important?

Vision: A world where everyone can understand and sustain biodiversity through the practice of observing wild organisms and sharing information about them.

- Engaging the public with nature
- Generating high quality biodiversity data
- Synthesizing that data into tools

What is an Observation/What should you include?

Who you are

You'll need to make an **iNaturalist account** and please only post your own personal observations

Where you saw it

Record both the coordinates of the encounter as well as their accuracy. You can obscure the location from the public

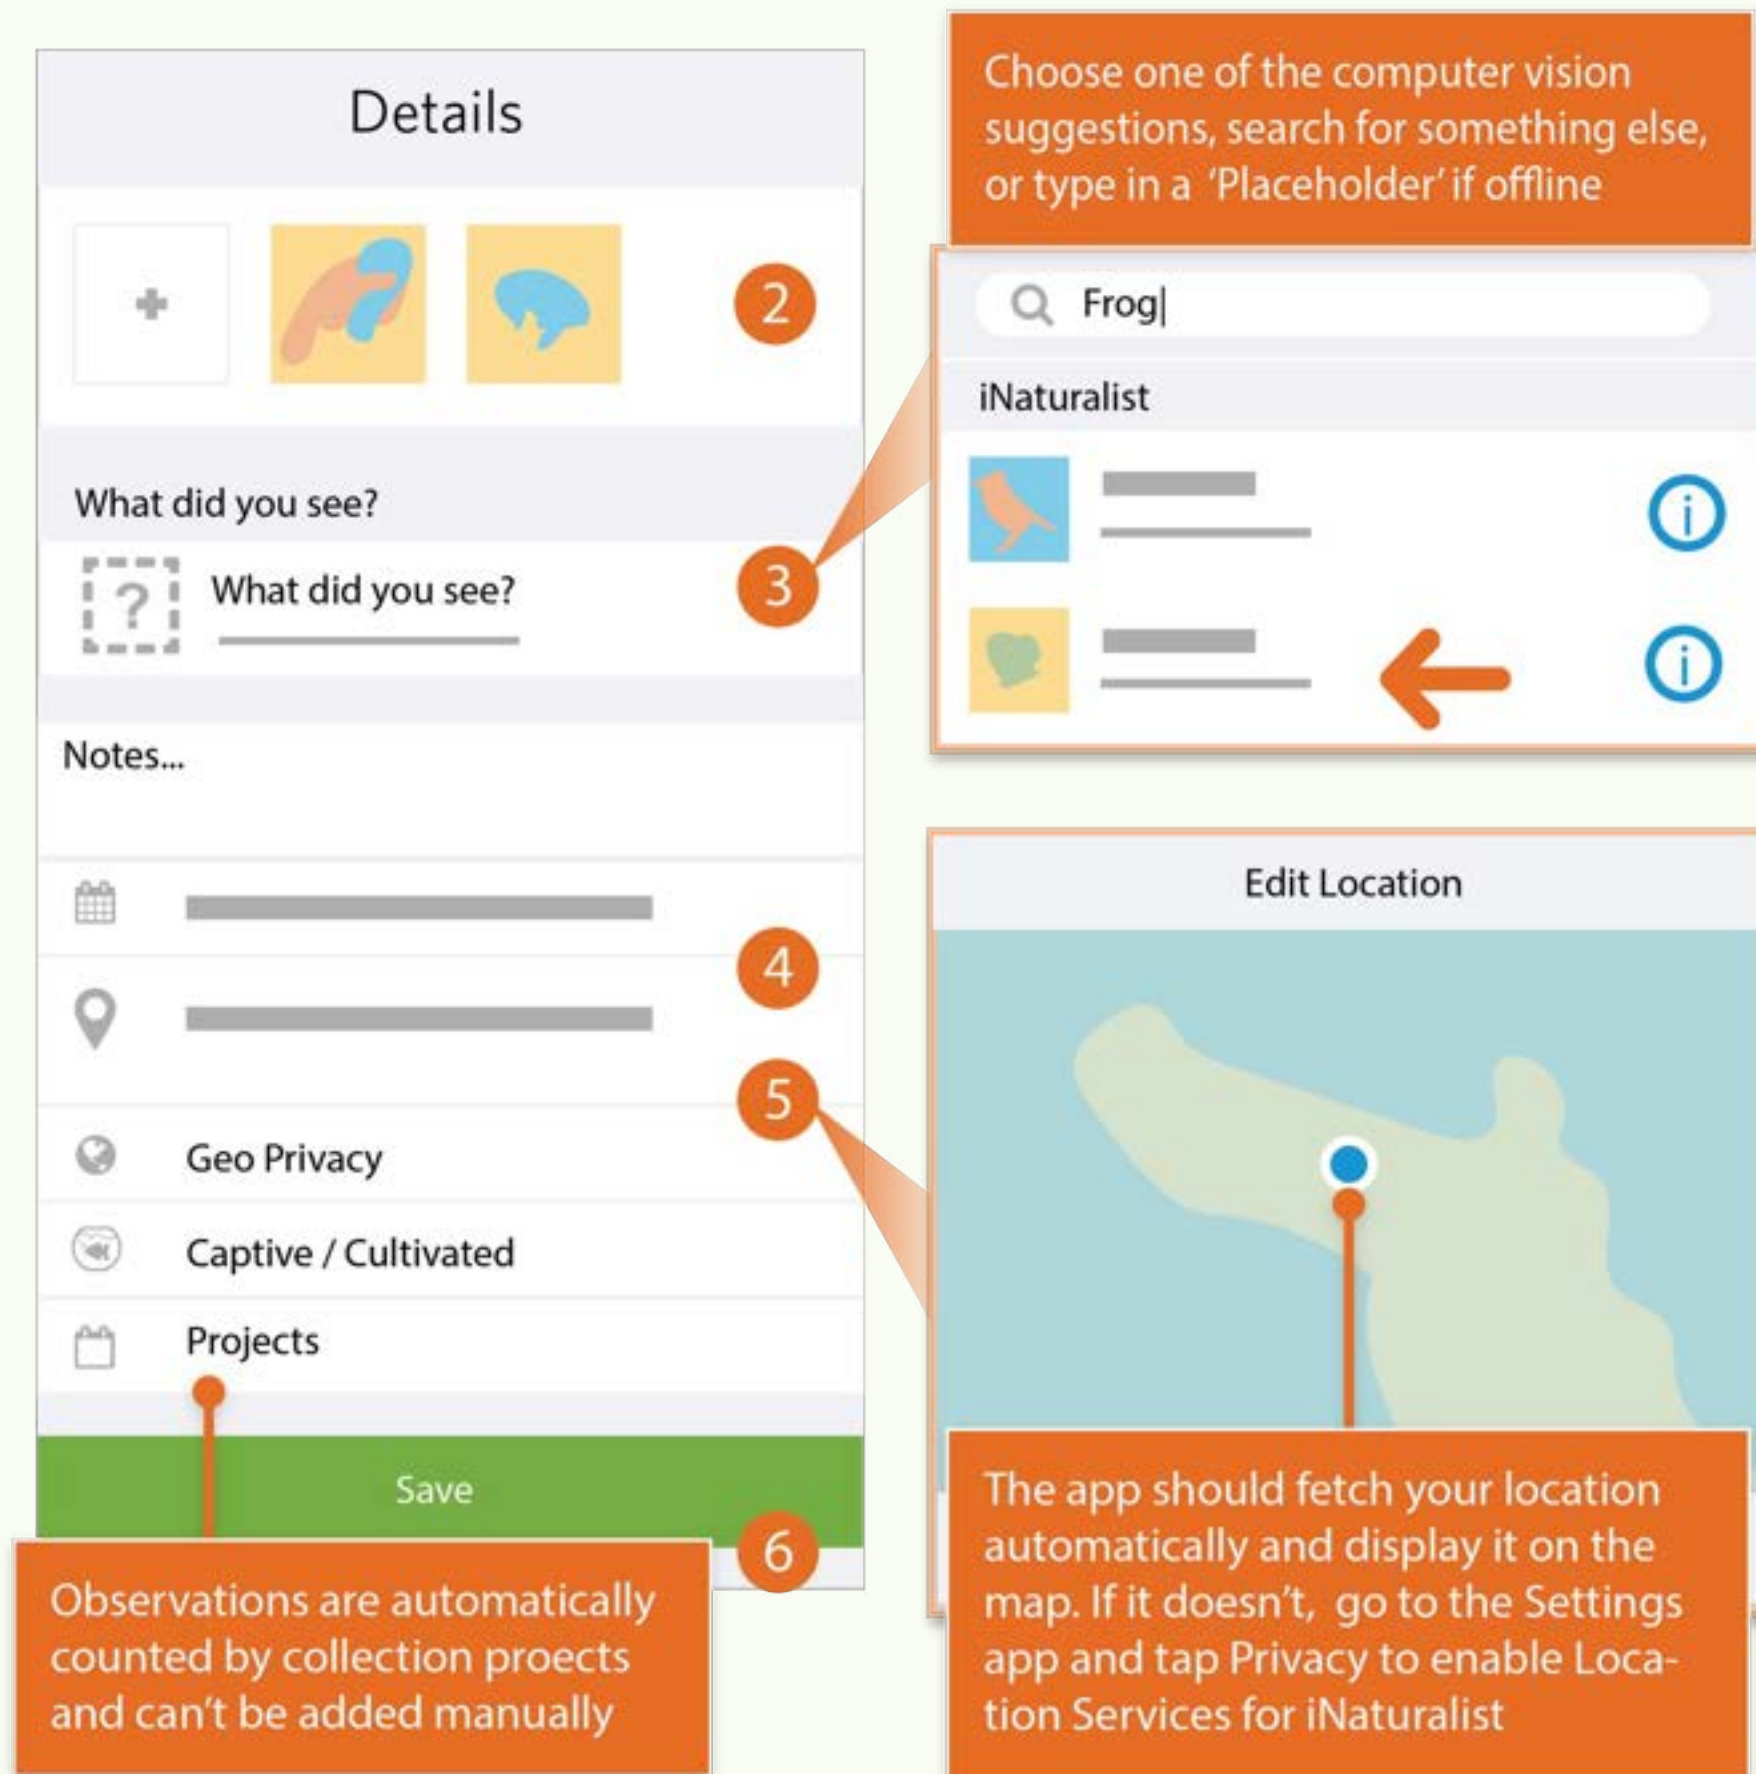

- Encounter with an individual organism at a particular time and location.
- Signs of organisms like tracks, nests, or things that just died
- What, Who, Where, When and Evidence
- Don't need to include all of these parts, but they do in order to become research quality observations for science.
- Separate observations for each organism you encounter

How to Make an Observation on iPhone

1. Tap observe.

How to Make an Observation on iPhone

2. Add one or more photos as evidence
3. Choose what you saw.
4. When you saw it should be added automatically.
5. Where you saw it should be added automatically. If it doesn't, check Privacy in the Settings app.
6. Save your observation.

How to Make an Observation on iPhone

7. Upload. This should happen automatically. If it doesn't, tap the Upload button. You can turn off automatic upload from the app settings from the Me tab.

8. Check back for activity on your observation from the community or be notified by email to the address in your account settings.

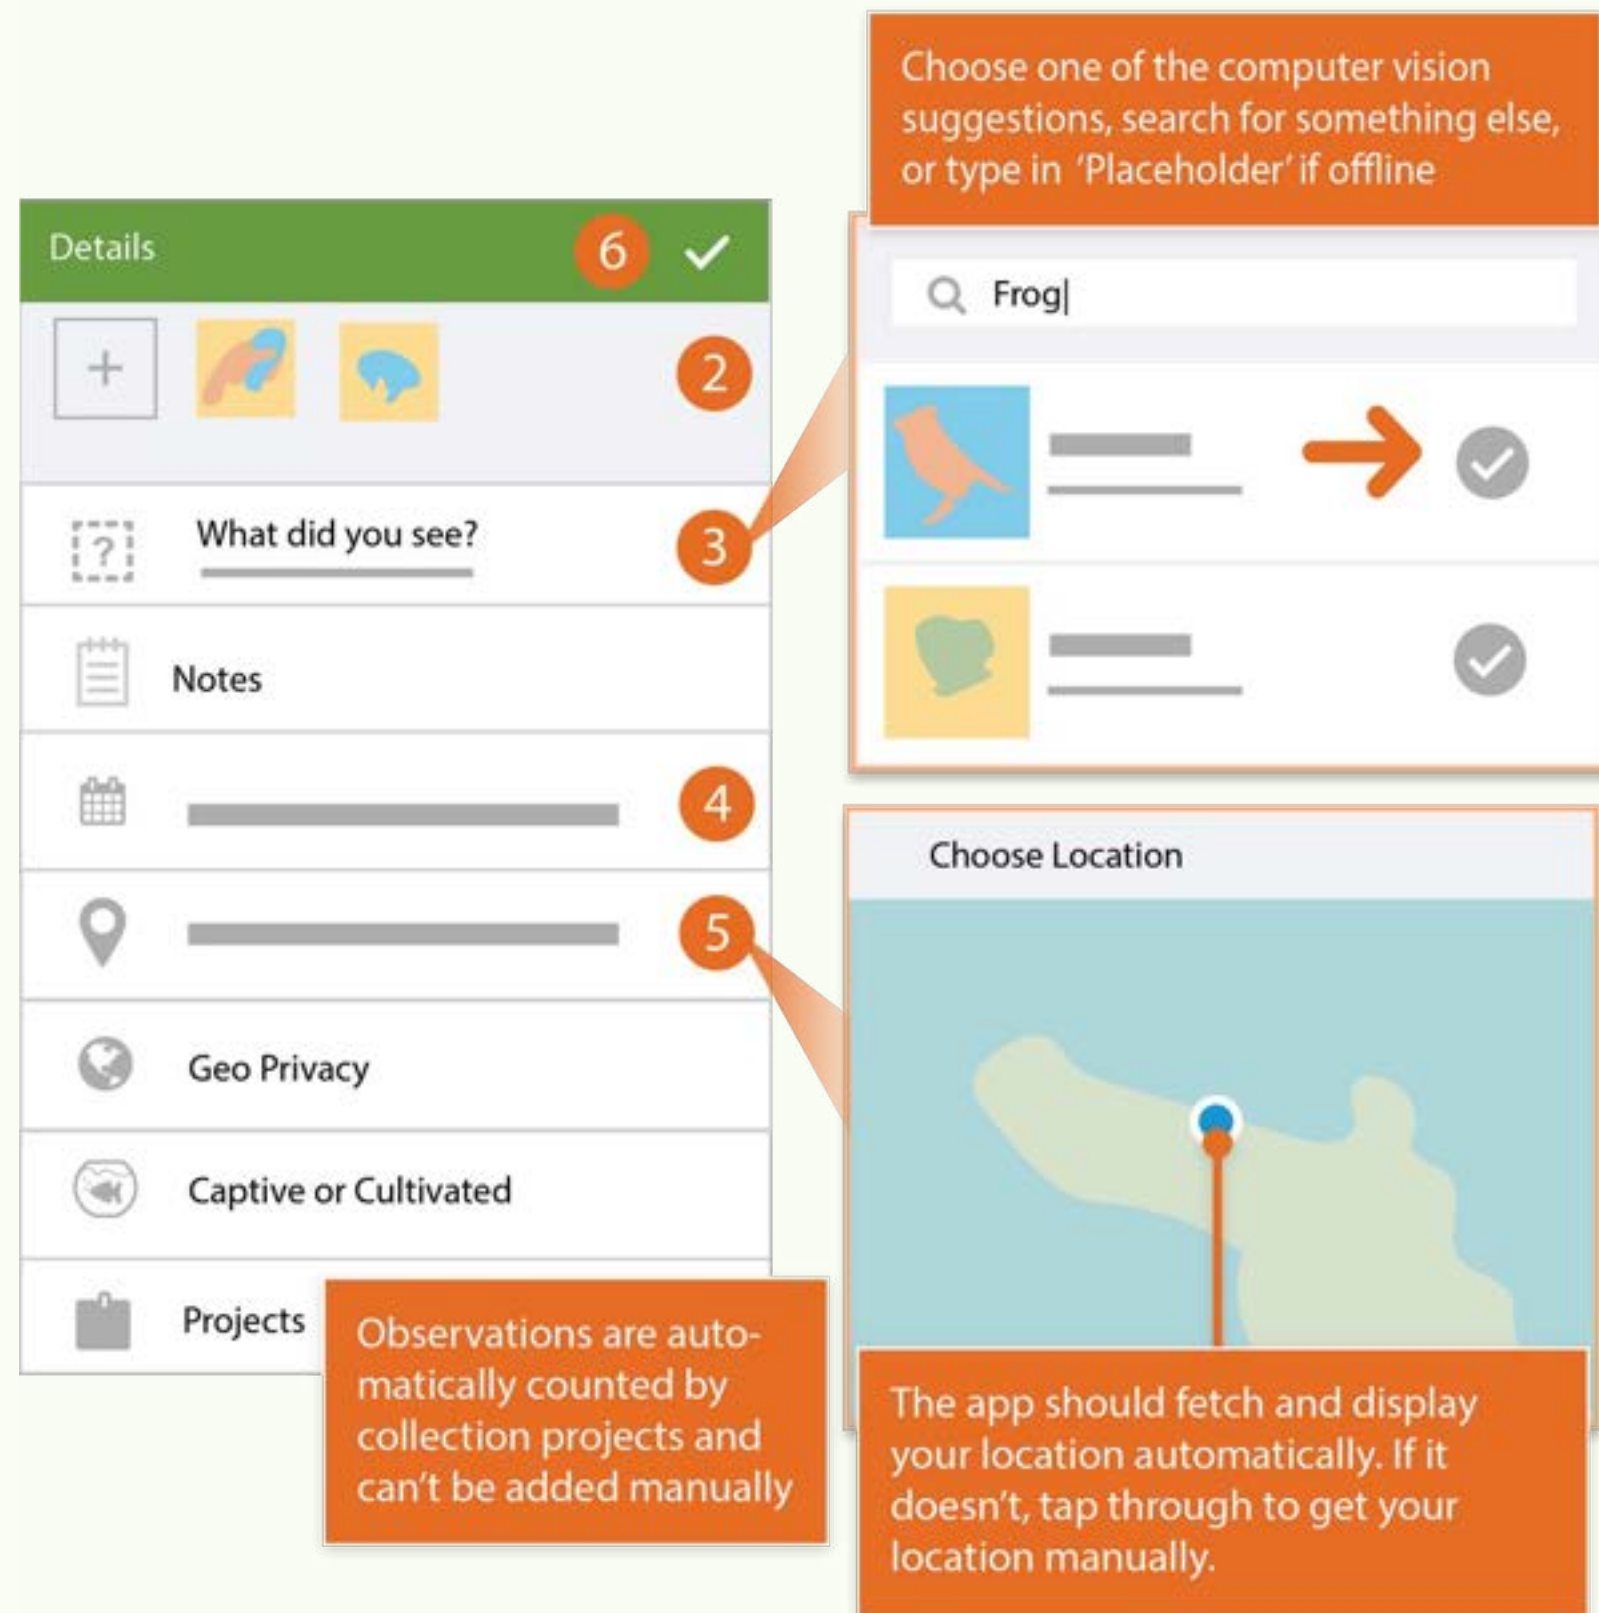

How to Make an Observation with Android

1. Tap the observe button from the My Observations tab.

How to Make an Observation with Android

2. Add one or more photos as evidence.
3. Choose what you saw.
4. When you saw it should be added automatically.
5. Where you saw it should be added automatically. If this doesn't happen, check app permissions in the Settings app.
6. Save your observation.

How to Make an Observation with Android

7. Sync to share with the community. This should happen automatically. If it doesn't, tap the button. You can turn off auto upload from the Settings tab.

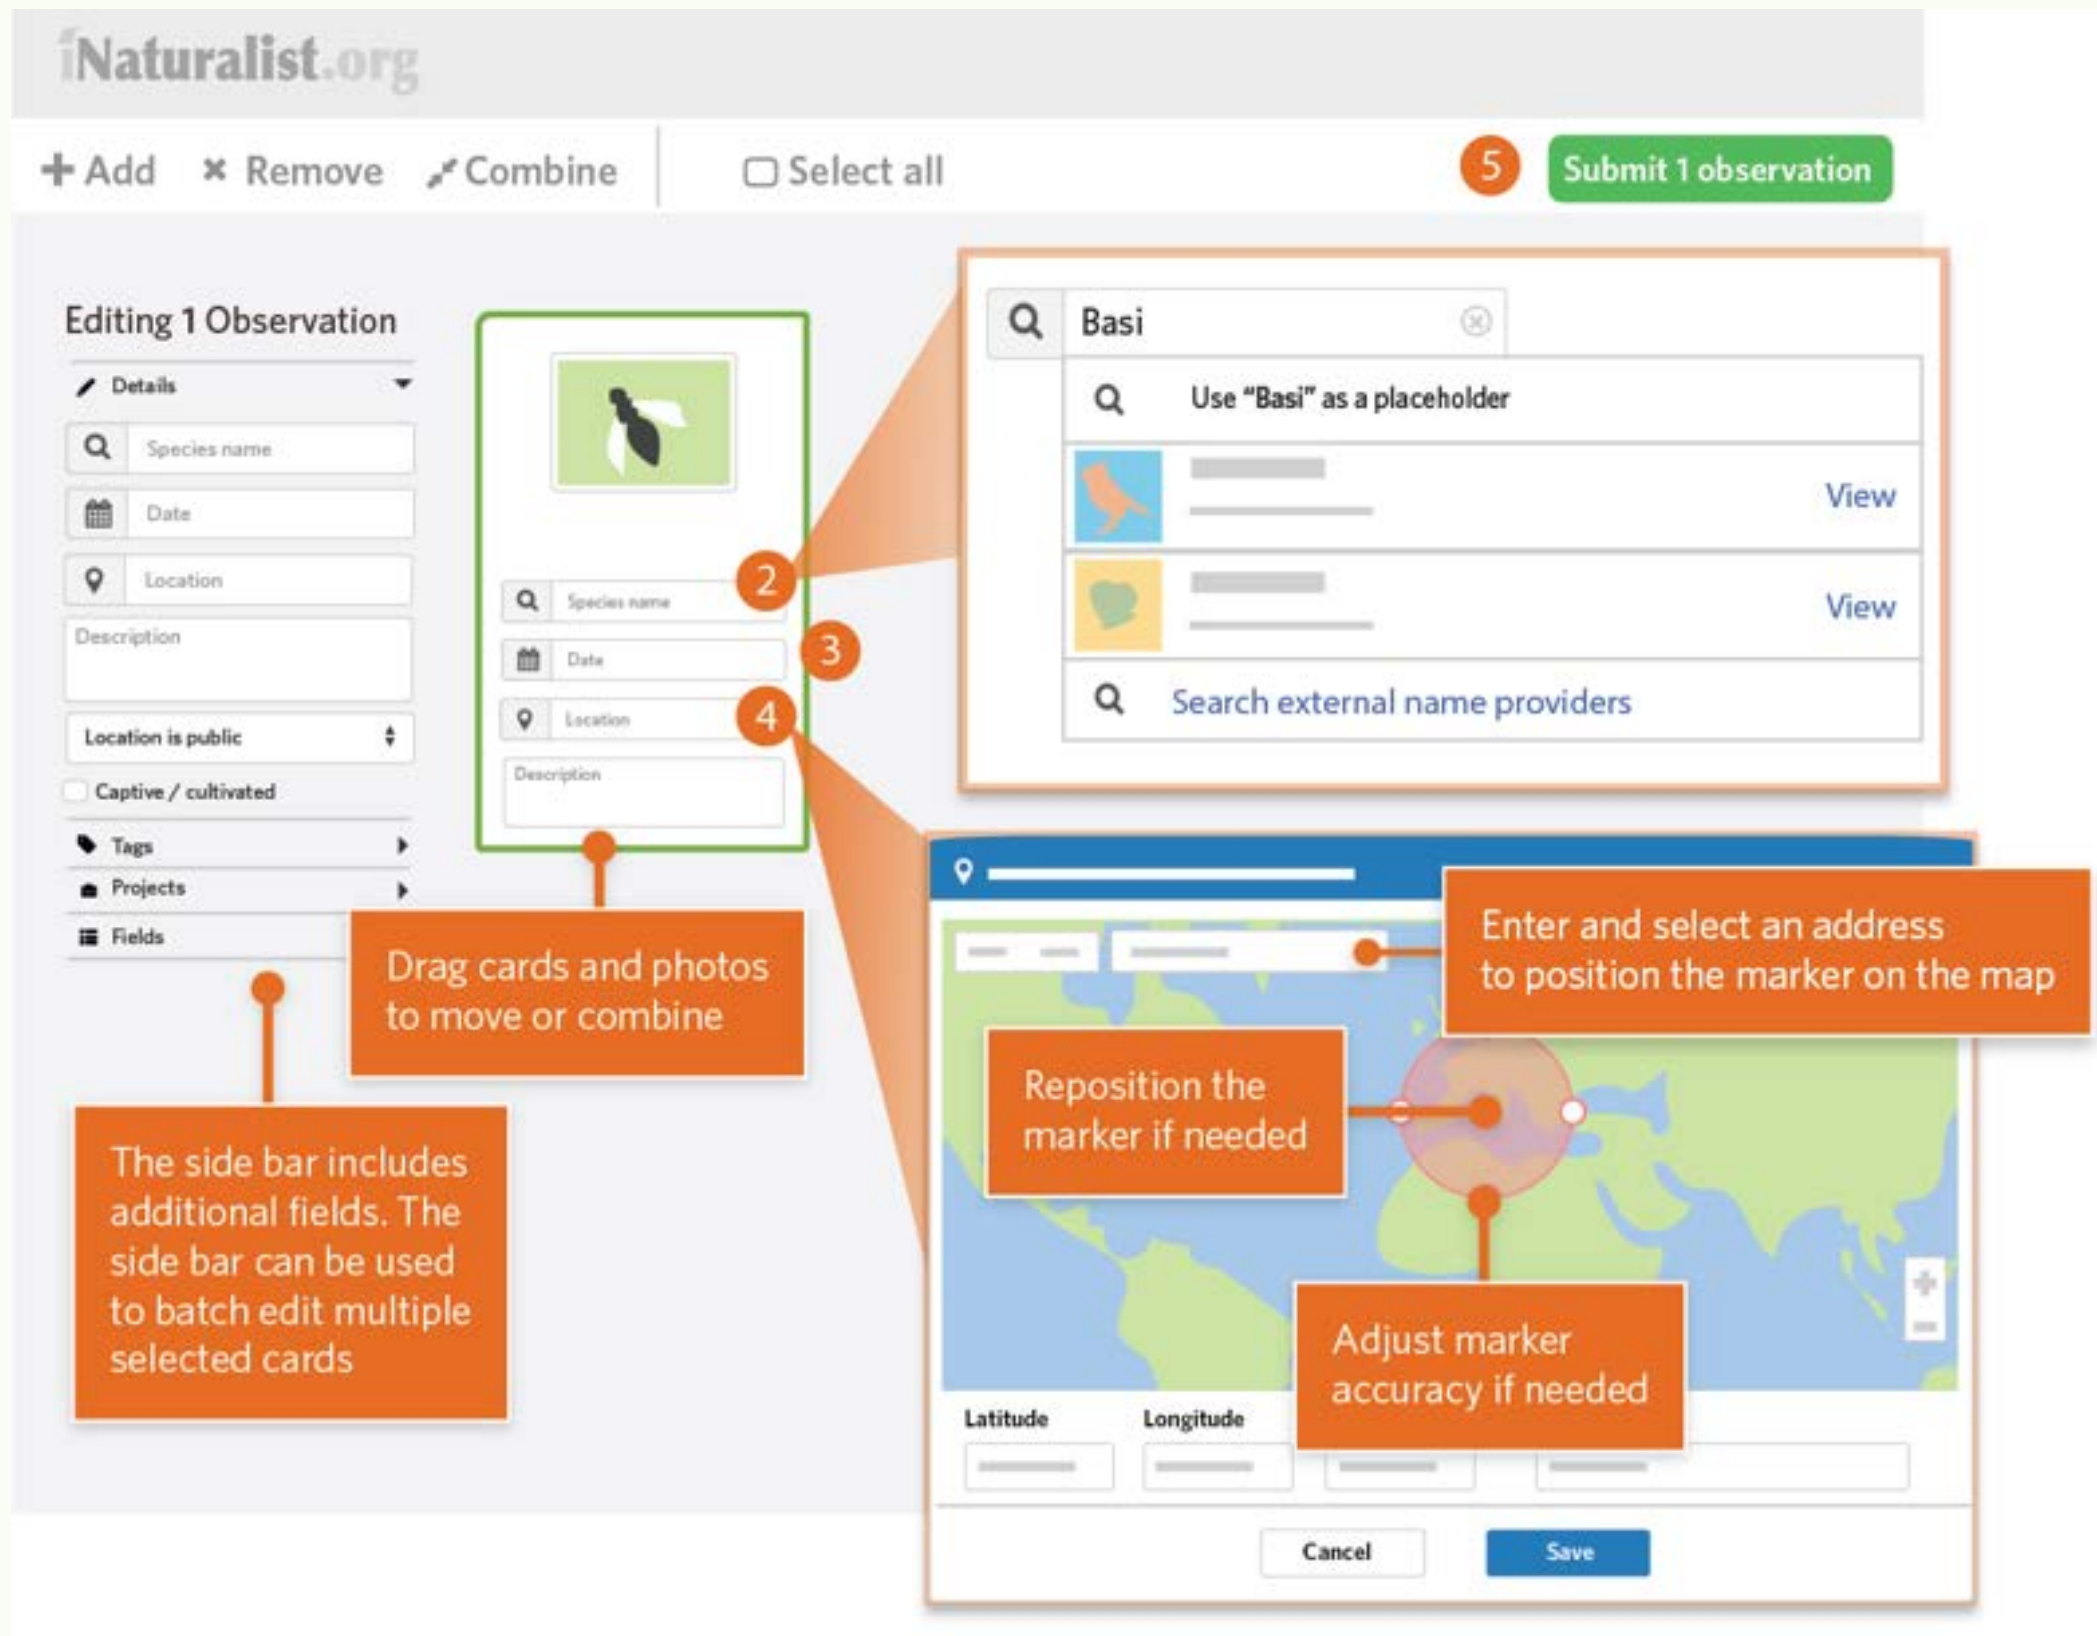

8. Check back for activity on your observation from the community or be notified by email to the address in your account settings.

Make an observation from the Web

1. Start by clicking the green Upload button from the header when you are logged in.

Make an Observation from the Web

2. Choose what you saw from the suggestions or by searching for a name.
3. Use the calendar to enter when you observed the organism.
4. Type in an address and select from the places offered.
5. Click submit!

Make an observation from the Web

7. Check back for updates on your observations by the community or be notified by email to the address in your account settings.

Projects

Projects let you pool your observations with other people on iNaturalist Canada. Whether you're starting a citizen science effort or keeping tabs on the birds in your neighborhood, Projects are the way to go.

Butterfly Bioblitz!

"Well hello there" Starting tomorrow and ending next Wednesday, July 26 - August 7 is the start of the annually Butterfly Bioblitz! It must be observed in SC during these dates and be a true Butterfly! Good luck!

- ps... I did not get that from Star Wars

Join Vermont Moth Blitz Week 2023 (July 22-30)

Explore Vermont's astounding moth diversity! By participating in our annual Moth Blitz, you will help the Vermont Moth Atlas develop a better understanding of the moths that call the Green Mountain State home. Over 2,200 moth species have been documented in Vermont with new species being found all the time. Who knows, maybe you will find one! We encourage everyone, from experts to amateur enthusiasts, to find, photograph, and share their moth discoveries with the Vermont Moth Blitz during...

Expanding scope

I am opening this project up to the entire state of Washington.

I am also planning to create sister projects based on WSU's Integrated Weed Control Project (<http://invasives.wsu.edu/biological/weed.htm>) and collect them in an umbrella project.

Using Seek

- No log in required, if you don't want to connect iNaturalist
- Child friendly
- Does not require an internet connection to work
- Post to iNaturalist from Seek
- Species information
- Give most accurate ID in taxonomic order
- Challenges and badges
