

Environment & Sustainability Report, 2021

Manhattan Stitching Company is conscious of environmental impact. In 2021, we established a baseline for greenhouse gas emissions and energy consumption due to our direct business activities. We will report each year and continue to look at ways to reduce our impact.

GHG emissions

102 MT CO₂e

SCOPE 1

46 MT
CO₂e

Source: fleet
vehicles

SCOPE 2

56 MT
CO₂e

Source: grid
electricity for
operational facility

Environmental metrics scope

The scope of our environmental metrics includes energy used to run our operations: our screen printing facility electricity and gasoline for company vehicles. There are no major relevant exclusions from this calculation. We also consume water and create material waste, however, we have not been able to obtain data for either that is high quality or consistent. We will continue to find ways to improve our data collection.

Electricity use

247 MWh of
electricity

Hazardous waste disposal:

25,000 gal aqueous
solution parts washer

% of suppliers attesting to Code of Conduct in last year:

100

Gasoline consumption

5.2k gallons of
gasoline

% of employees attesting to Code of Conduct in last year:

100
