

Environment & Sustainability Report, 2022

Manhattan Stitching Company is conscious of environmental impact. In 2021, we established a baseline for greenhouse gas emissions and energy consumption from direct business activities and continued to measure in 2022. We will report each year and continue to look at ways to reduce our impact.

2021 baseline: **102** MT CO₂e

Environmental metrics scope

The scope of our environmental metrics includes energy used to run our operations: our screen printing facility electricity and gasoline for company vehicles. There are no major relevant exclusions from this calculation. We also consume water and create material waste, however, we have not been able to obtain data for either that is high quality or consistent. We will continue to find ways to improve our data collection.

Hazardous waste disposal:

4,500 gal aqueous solution parts washer

% of suppliers attesting to Code of Conduct in last year:
100

% of employees attesting to Code of Conduct in last year:
100
