

2026 Cotton Products for PGR and Defoliation

In 2026, Vulpes will bring to the market a cotton plant growth regulator and a premium boll opener, all manufactured in Texas.

Mepiquat pentaborate

Vulpes proudly introduced Mepiquat pentaborate (commercially known as Pentic by BASF/NuFarm) to farmers in 2025, achieving incredible results in the field. This product has been in limited supply for several years due to manufacturing and supply chain challenges. Still, Vulpes's proprietary manufacturing process is bringing the premium cotton plant growth regulator back to the market. No need to worry about overuse, burn, etc., that is a concern with generic PIX, and enjoy better performance due to the premium cotton PGR!

Cyclanilide

Finally, with sufficient demand, Vulpes will bring Cyclanilide (the key active ingredient in Finish 6 Pro) to the market in 2026. Using novel manufacturing processes and new raw materials, Vulpes can produce Cyclanilide at an exceptionally competitive price. Vulpes has also developed a new, "no-settle" formulation to address the challenges in using and storing Finish 6 Pro.

Vulpes expects to have a formulated package like Finish 6 Pro, but at a lower price!
