

The Zena Triple Cone - Perch Preventer

Data Sheet

Description

The Zena Triple Cone Perch Preventer discourages birds from perching on power line structures. The Triple Cone moves birds away from unsafe and sensitive areas, effectively lowering the risks of avian electrocution, insulator and streamer flashovers, structure corrosion and bird strikes.

Benefits

- > Transmission & Distribution operators reduce outages from line flashovers and electrocutions,
- > Telecommunication operators reduce bird-related maintenance on microwave installations,
- > Airport operators reduce strike risk and improve lighting and navigation equipment reliability.

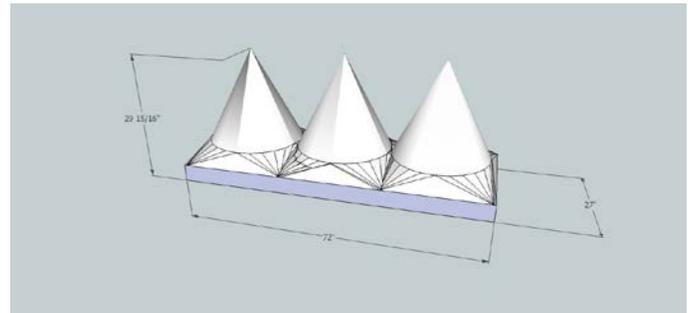

Features

Designed specifically for raptors and larger birds, the Zena Perch Preventer:

- > Discourages both perching and nesting,
- > Is bird safe and environmentally friendly,
- > Installs quickly, reducing downtime,
- > Has excellent self-washing characteristics,
- > Can protect runs of any length.

Application

The Zena Triple Cone Perch Preventer is shipped ready to mount on the structures in minutes. The product is molded using proprietary high-density polyethylene that is contaminant and weather-resistant, and is fixed to the structure using stainless steel straps.

Catalog Number	Dimension (inches)			Material

Satisfied Customers

Zena cones have a proven track record of reducing the risks associated with raptors and large birds around power line structures.

All utility companies investigate power outages in their efforts to deliver increased reliability and customer satisfaction. Searching for the unknown causes of some outages, Florida Power & Light (FPL) found that bird streamers, or waste, was causing transmission power line flashovers.

In collaboration with conservation and industry partners, this innovative utility began a research program to find effective ways to stop raptors and large birds from perching above insulators on transmission line structures.

Avian researchers from the Falcon Bachelor Bird of Prey Center in Miami captive-tested various bird-deterrenting devices, and found that Zena cones were the most effective of all deterrents tested.

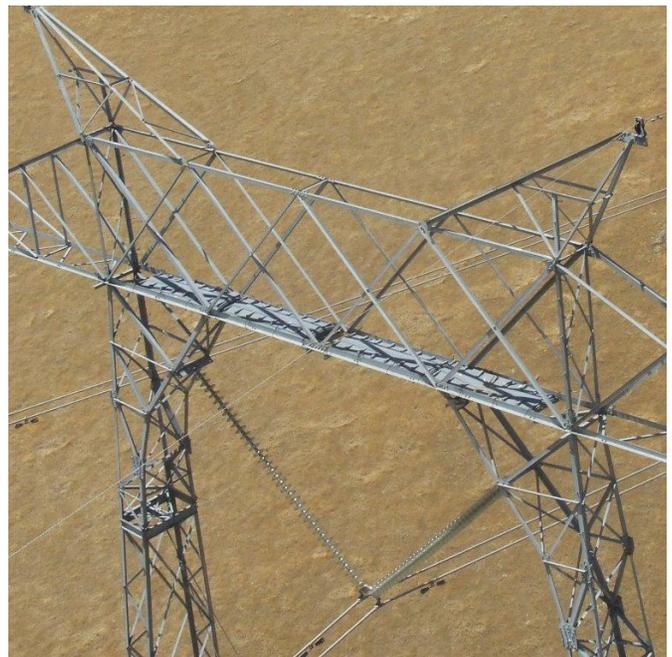

In field tests, installing Zena cones on lines resulted in a very significant reduction in outages. The Zena Perch Preventer is now one of the standard deterrents used by many utility companies to stop streamer flashovers on their H-Frame transmission structures.

The Triple Cone Perch Preventer can be used on a variety of structures

The Falcon Bachelor Bird of Prey Center conducts programs in ecological research, operates a bird of prey rehabilitation center and offers wildlife education encounters. The organization is committed to ensuring the future of wildlife by creating lifetime experiences to enhance public awareness concerning their environmental responsibility.

The Zena Design Group develops products for the energy, aviation and telecommunications industries to mitigate the impact of modern technology on avian species. The group focuses on the innovative research and fast-cycle development of avian safety systems. Additional information is available at www.zenadesign.com.
