

Nutrition & Wound Consultation & Education Services

Wound Specialist

Al E. Roberts CRRN, CWS, DMT-A, FACCWS

cell: (904) 629-1868 email: al@healthtoheal.org

Jacksonville, Florida

Managing patients with wounds can be a daunting task. You have so many variables to manage, they can seem impossible to control. Wound care is one of the fastest growing areas in the geriatric population and these patients make up more than a 1/3 of home care patients.²

Impaired wound healing in the elderly represents a major clinical problem that is growing as our population ages.¹ Wounds, can take up to 50 percent of care resources provided from home health agencies². One often underestimated area is the role nutrition plays,³ in chronic wound management.

Qualified Clinician – How do you know if you have educated and well-prepared clinicians that can both manage your patients well and manage the agency's dollars.

Confident Provider Relations – Are your clinicians knowledgeable in the science of wound management? Can they help providers understand that different treatments are better, equivalent to, or are necessary over what a provider may order?

Product Expert – Do your clinicians understand the characteristics of the hundreds of different wound care products available today? Can your clinicians help guide your purchasing department, for the most cost-effective wound care supplies?

Clinical Resource – Does your agency have a resource that can assist with any and every wound issue, your staff encounter every day with your patients?

These are the attributes that your company must possess for you to provide the best possible care to your wound patients, all while being fiscally responsible to your agency.

With over 20 years of practicing wound care and having treated thousands of patients as a consultant; Qualified, Educated, Well Prepared, Product Expert, Provider Relations, Clinical Resource, are just a few of the attributes that I can bring to your company.

Consultation services are provided at a per visit rate and prices may vary based on geographic location. Please review my website, www.healthtoheal.org, for multiple case studies of past patients with proven results of rapid healing.

Wound Consultation Visits include: Patient Assessment – Wound Assessment – Patient Education
Nutritional Assessment – Communication with Clinical Team – Treatment Recommendations
Order Documentation – Supply Ordering Assistance – Clinical Education – Clinical Support
