

Why every RV owner needs a copy of

***My RV “LOGBOOK”***  
***A Vital Record of my RV’s Equipment & Appliance Information***

Copyright © 2018 – Dale Lee Sumner

Whenever you are looking for a service or repair solution by an RV dealer or mobile provider – “If you want a service/repair obstacle resolved promptly, simply provide the proper information, up front, to make it happen.”

Contrary to common expectations, unless you are requesting work to be done on the chassis (or powertrain), supplying a repair facility with the Year, Make, and Model, or just your RV’s vehicle identification number (VIN), will **NOT** provide the service personnel with a knowledgeable starting point about the specific equipment/appliances already existing on, in, or under your RV. The exact items an RV manufacturer may have installed during the “initial build” is a mystery and requires someone to examine your “distinctively built” RV for specific data - every time a service/repair is requested.

Because specific information is so critical, this logbook will enable you to consolidate the data from each of your RV’s equipment/appliances’ applicable manufacturer’s Product Labels (a.k.a. the proper information). Afterward, you will have all the necessary facts readily available for any service representative, technician, or parts-counter worker. By assembling the proper information into this logbook, you will help expedite the time necessary to identify/locate any needed part(s) and accomplish your requested service or repair.

As the Boy Scout Motto has always advised, “Be Prepared.”

Furthermore, documenting all your service/repair history in this concisely laid-out logbook may enhance the resale value of your RV – it certainly has for the author, repeatedly.

Hope this helps.
