

# Presenting: **SHOWERMISER**

## A revolutionary water-saving product for RVs

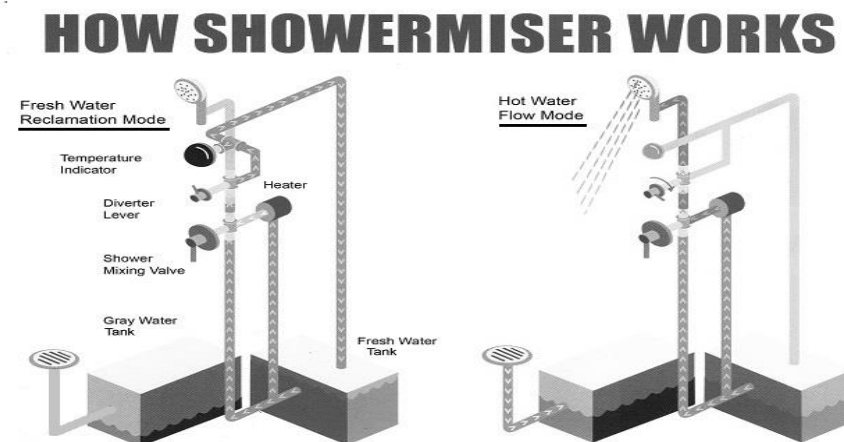

### from Aqua View, Inc.

It's not a showerhead. It's not a faucet. It's not a water restrictor. It's actually a **Freshwater Reclamation System**.

Unlike water flow restriction devices, the SHOWERMISER system recirculates freshwater that usually goes down the drain and is, unfortunately, wasted. By recirculating the usually wasted freshwater, this system extends your fresh and gray water tank capacities up to 40% – without replacing tanks and adding unnecessary weight.

SHOWERMISER connects to your shower outlet. Turning a small lever, you redirect the unproductive cold water from the shower, typically disappearing down the drain, back into the freshwater tank.

SHOWERMISER, with its unique and patented color-change feature (blue = cold, white = hot), will, at average room temperatures, notify you in a brief number of seconds that hot water has arrived. Once the hot water is present, just turn the lever back to the showerhead, and you have hot water ready to go.

**(Comment:** Available as an aftermarket kit for retrofitting existing RVs, this product is excellent for RV enthusiasts that already dry camp/boondock or have a tankless water heater!)

For more information and pricing, check out their website: [AquaViewInc.com](http://AquaViewInc.com)

Hope this helps.
