CARBO-BOOST N

WITH NITROGEN PROTEIN

ACTIVE POWDER COATING FOR SEEDS

4N : 3P : 2K : 10Ca : 14OC

- **REDUCES COMMERCIAL FERTILISER APPLICATION**
- **INCREASES NUTRIENTS AVAILABILITY IN SEED BED**

CARBO- BOOST N is a natural powdered seed coating. This product contains nitrogen as a protein nitrate, micro phosphorus rock, potassium silicate, calcium carbonate, organic carbon and hydro-dried carbon activator.

This product is used in conjunction with a liquid nutrient agent chelated to shuttle nutrients directly into the plant root tissue for quick uptake.

CARBO-BOOST N is used in broad acre farming and horticulture as a seed coating for cereals, legumes and seeds that require vigorous germination in areas where available nutrients are marginal.

Typical Analysis

4% Nitrogen (N) : 3% Phosphorus (P) : 2% Potassium (K) : 10% Calcium (Ca)
14% Organic Carbon. Also contains trace elements

Timing

CARBO-BOOST N replaces granular fertiliser nutrients in the early stages of crop production, lasting up to 8 weeks in ideal growing conditions. **Extra nitrogen and potassium may be required to finish a high yielding crop.**

Application Rates

CARBO-BOOST N is a concentrated powder for use in seed coating machines and seed applicators. Apply 5kgs to 1000kgs (1 ton) of seed along with nutrient binder for even application over seed. Once seed is dry it can be stored in silos ready for sowing. Recommended use with PHOS-START™ chelated liquid seed dressing.

NOTE: CARBO-BOOST N can be used with fumigated seed or biologically active seed dressings.
