NITRO PLUS 20N

BOOST PROTEIN IN YOUR CROP 20N : 52NP : 0P : 2K : 2S

- FEEDS PROTEIN DIRECT TO PLANT
- INCREASES NITRATE CONVERSION
- INCREASES PLANT GROWTH
- APPLIES BALANCED PROTEIN IN GRAIN

NITRO-PLUS 20N is a liquid fertiliser that contains 52% Crude Protein + 20% Nitrogen, all in available form plus Potassium and Sulphur. These nutrients are critical for seed crops in final stages of growth.

Applying NITRO-PLUS 20N at boot stage, it boosts protein directly to the grain in the head and not to the leaf. As the plant has started to reach reproduction stage NITRO-PLUS 20N reduces the risk of frost damage as the nitrogen is in hydro-carbon form reducing water in the plant.

Typical Analysis

20% Nitrogen (N), 52% Nitrate Protein (NP), 0% Phosphorous (P), 2% Potassium (K), 2% Sulphur (S)

Timing

Apply at start of jointing to early boot stage in cereal crops and at vegetable stage in oil crops.

Application Rates

7-10 litres to 50 litres of water per hectare for cereal crops (e.g. wheat, oats, feed barley and other feed grains). 10 litres to 50 litres of water per hectare for oil crops (e.g. canola, sunflower, cotton, corn and sorghum).

Can be used with other foliars with compatible pH. Do not decant into steel drums or containers for storage as corrosion can occur as the pH is acidic.
