PHOS-START® FORTE

CHELATED PHOSPHORUS FOLIAR 12P : 4N: 2K: 4Zn

- **STIMULATES EARLY CROP GROWTH**
- **QUICK AVAILABLE PHOSPHORUS**
- **PROVIDES VIGOR IN NUTRIENT DEFICIENT SOILS**

PHOS-START® FORTE is a formulated liquid fertiliser containing 12% available phosphorus for stimulation in phosphorus deficient soils. PHOS-START® FORTE also contains 4% nitrogen in slow release form, along with chelated nutrients to increase growth and vigor in young plants. This will also improve plant tillering and strength. This product is not a total fertiliser for a crop but will increase phosphorus uptake in early crops and pasture.

Typical Analysis

12% liquid Phosphorus (P) (chelated), 4% Nitrogen (N), 2% Potassium (K) and 4% Zinc (Zn), Omega 3&4, 30% Crude Protein. Minor elements of Calcium (Ca) & Iron (Fe) in base.

Timing

PHOS-START® FORTE should be applied early in crop development at the outset of tillering or good leaf cover and can be used in conjunction with herbicides and pesticides. PHOS-START® FORTE is an ideal topdressing agent for pasture legumes after cutting or heavy feeding (wait till a leaf cover is formed).

PHOS-START® FORTE is best used under 18 months as proteins may become anaerobic.

Application Rates

Apply 2 litres of PHOS-START® FORTE concentrate per hectare in most cereal crops and legumes. Apply 5-7 litres per hectare for horticulture farming. This product can be applied with other nutrients or foliar applications, though recommend test in a bucket before proceeding to spray.

Copper and/or other elements can be added if required.
