

# FULL SPECTRUM vs CBD ISOLATE

THERE ARE DIFFERENT CANNABINOID SPECTRUM OPTIONS TO CHOOSE FROM WHICH ARE FULL-SPECTRUM, BROAD-SPECTRUM CBD, CBD ISOLATE AND TERPSOLATE. WHILE THESE FOUR TYPES OF PRODUCTS MAY SOUND SIMILAR BUT THERE ARE ACTUALLY APART FROM EACH OTHER.

## FULL SPECTRUM

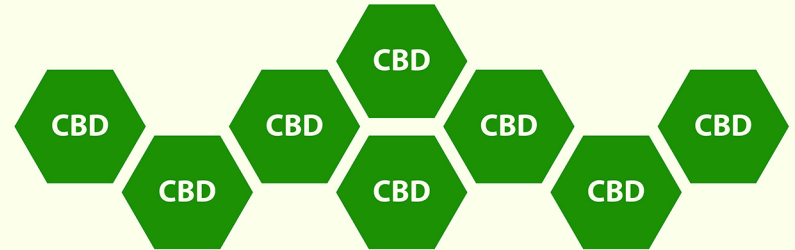

(Everything from source plant)

A full-spectrum CBD product, manufacturers use dried hemp plant matter to extract cannabinoids. Usually, a supercritical CO2 extraction is used to draw out these plant compounds. full-spectrum CBD oil that contains all the cannabinoids that hemp has to offer.

## CBD ISOLATE

(Only CBD)

CBD Isolate is made from carefully filtered hemp plant extract that is obtained with supercritical CO2 extraction method This allows us to produce the cleanest and purest product available on the market.
