

## The Wave – Ergonomic ARM Glide

A freestanding, handcrafted ergonomic desk accessory designed to support the forearm, reduce wrist strain, and promote healthy posture while working on a computer. It allows movement from the keyboard to mouse using shoulder motion, keeping the wrist neutral and fingers responsible for typing only.

With a smooth, contoured surface to relax the forearm in while supporting the arm, seeming, like a boat as it glides smoothly across glass, laminate, or wood surfaces.

Cool in looks! Vibrant ocean-inspired colors, blues, teal greens, sea green, purple and sand pink. Request your color, we'll try to do that! (Some might like a smoky gray/black, men?) Perhaps.

Light weight and portable, use with desk tops or tablets or lap tops. Remember we are not slaves to the mouse! To keep it moving slick, clean the desk surface when needed, only, with vinegar water and a drop of dawn. Clean the desk top and, also, the base of unit. Oh,lah! DO NOT USE WINDOW CLEANER AS IT CAUSES WAX BUILD UP, fyi.

My experience. Over time my wrist started developing little white nodes of fibromyalgia. Rendering my wrist sore and painful, every day. I had to make a remedy to continue my efforts. But, to get the perfect fit it took time! However, I needed it stylin', you know, pretty! Now I have no pain, no more growths. They didn't go away, they just stopped growing !
