

AXE55 Technologies

Master your Equity Chain - Secure your Mission

AXE55 Technologies fuses proven intelligence tradecraft with cutting-edge AI to deliver a comprehensive solution that transforms uncertainty into strength. By integrating equity chain mapping and advanced operational risk analysis, **we uncover hidden vulnerabilities and reinforce critical points of failure**, enabling more secure, transparent, and resilient operations across your digital and physical landscape.

AXE55 delivers actionable business intelligence products and procurement services tailored to the needs of discerning cyber security leaders.

Overview

An **equity chain** isn't just about who owns a company—it's about the hidden intersections of **ownership, financial control, digital dependencies, and persona management** that shape operational risk. By mapping financial control, third-party influence, infrastructure, and the identities that interact with them, AXE55 Technologies uncovers **vulnerabilities that traditional audits miss**. This unified approach to special procurement and equity chain mapping gives organizations the clarity and control needed to secure every layer of their operational ecosystem.

The Problem

- ❖ 98% of organizations use third-party code in their software, yet only 22% have visibility into their full digital supply chain dependencies. (Source: Synopsys Open Source Security and Risk Analysis Report)
- ❖ The average time to detect a supply chain breach is 235 days, allowing adversaries to operate undetected within trusted systems. (Source: IBM Cost of a Data Breach Report)
- ❖ 52% of codebases in critical infrastructure sectors contain known high-risk vulnerabilities due to outdated or unmonitored third-party components. (Source: Veracode State of Software Security)
- ❖ Only 11% of organizations have visibility into all tiers of their supplier ecosystem, while 36% only see their Tier 1 vendors—leaving ownership, control, and layered risk largely obscured. (Sources: Traxtech; AuditBoard)
- ❖ Just 33% of organizations actively manage their third-party vendor relationships—the remainder lack sufficient governance over ownership changes, control, or influence across extended supply chains. (Source: Mitrastech 2024 Third-Party Risk Management Study)

Our Core Capabilities

Advanced Digital Vulnerability Assessments
Proactive Hunt-Kill Threat Operations
Personal Identity Management Solutions
Secure Third-Party Procurement

AXE55 Technologies delivers a comprehensive defense strategy designed to map and assess every layer of your equity and digital footprint. By integrating advanced risk mapping, third-party code analysis, infrastructure assessments, and identity management, we uncover threats before they take hold and apply special procurement strategies to secure every link in your operational ecosystem. This is **Total Enterprise Defense**—a unified approach that transforms your organization from vulnerable to resilient, from exposed to fortified.
