Step 28

BalanceBox® 400 Floor Support

- 10** Place 2 interface brackets [L] over the nuts [F] and mount each interface bracket with 2 screws [C].
Tighten the screws by hand. Make sure the triangle arrow points upwards.
The height setting of the BalanceBox® 400 will follow.

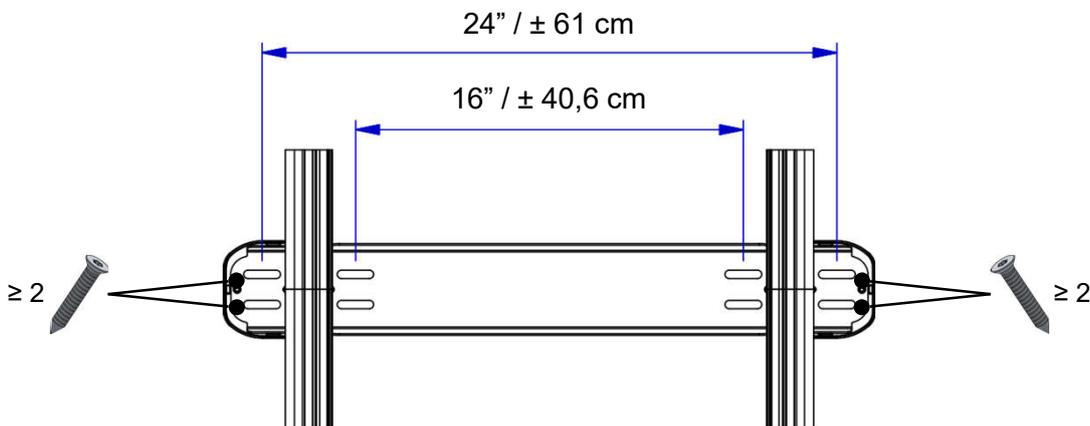

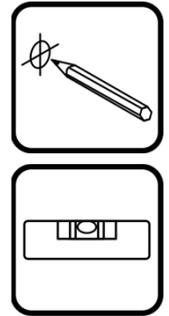

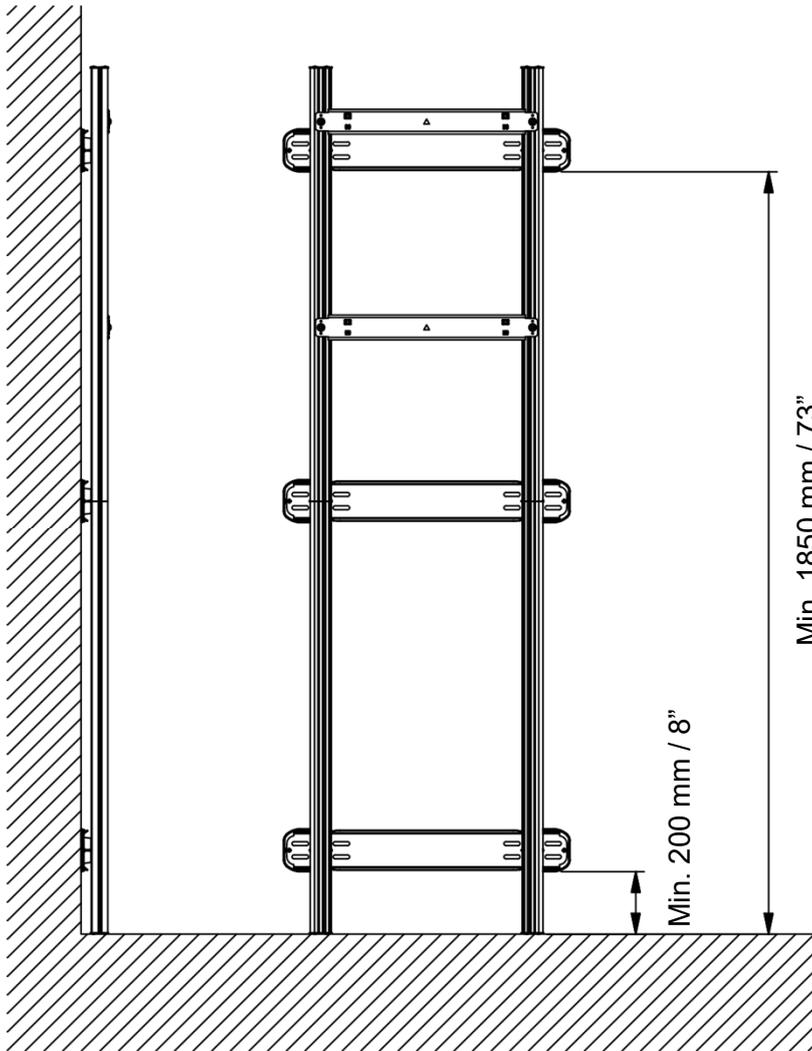

- 11** Mount the end caps [O] on each end of the profile by using the fasteners [G].
Tap the fasteners in with a mallet.

BalanceBox® 400 Floor Support

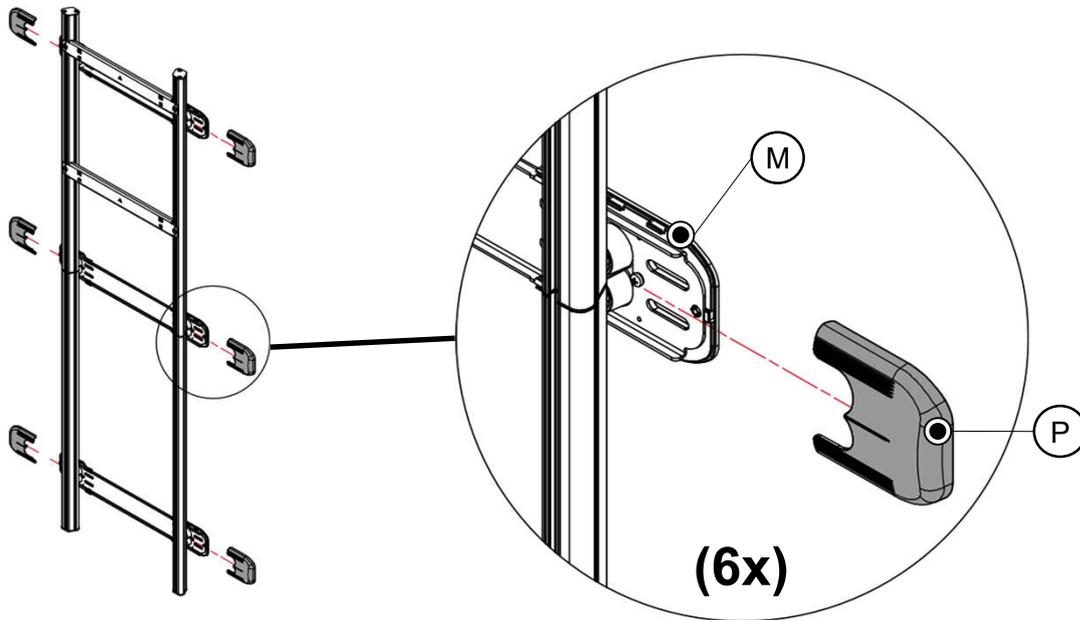

Place the floor support against the wall. If needed move the top and bottom wall bracket.
Mark at least 4 holes per wall bracket, 2 holes left and 2 holes right. Do this for all 3 wall brackets.
In case of a studded wall, locate the studs and mount on the studs.

- 12** Remove the floor support from the wall and drill the holes.
Mount the floor support to the wall using appropriate mounting hardware for the type of wall.

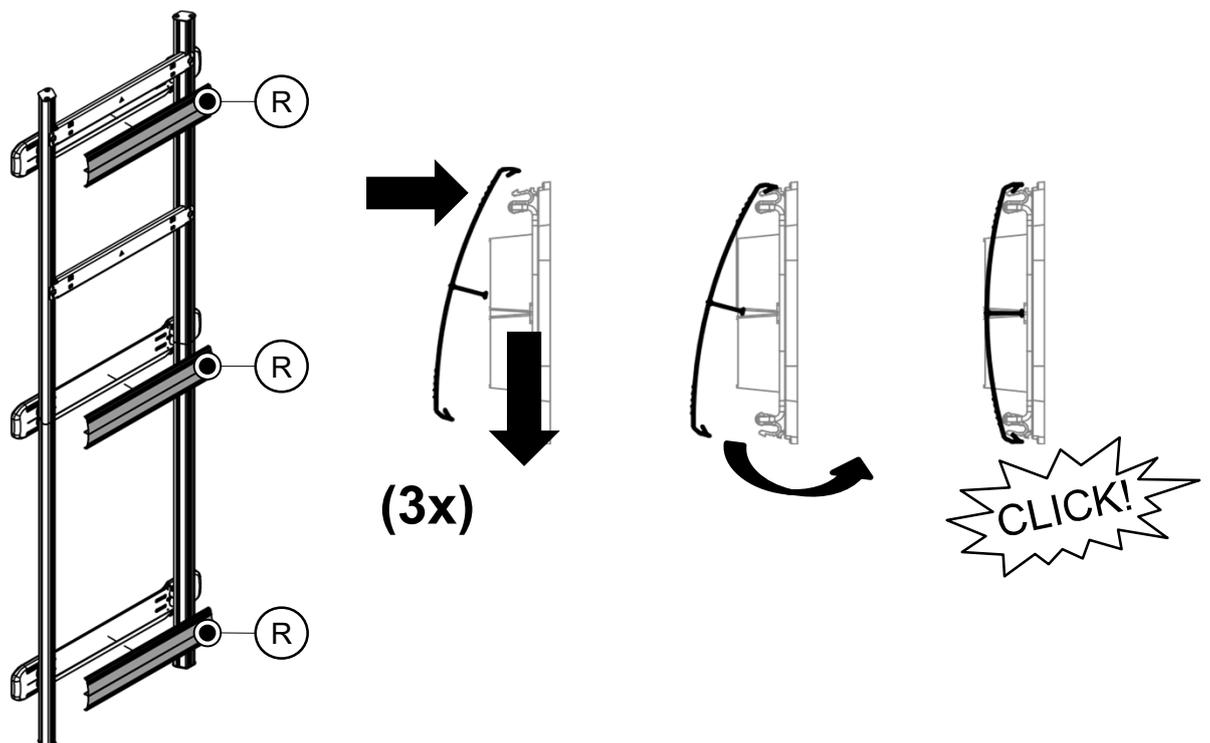

BalanceBox® 400 Floor Support

13 Mount 6x cover [P] over each wall bracket [M]

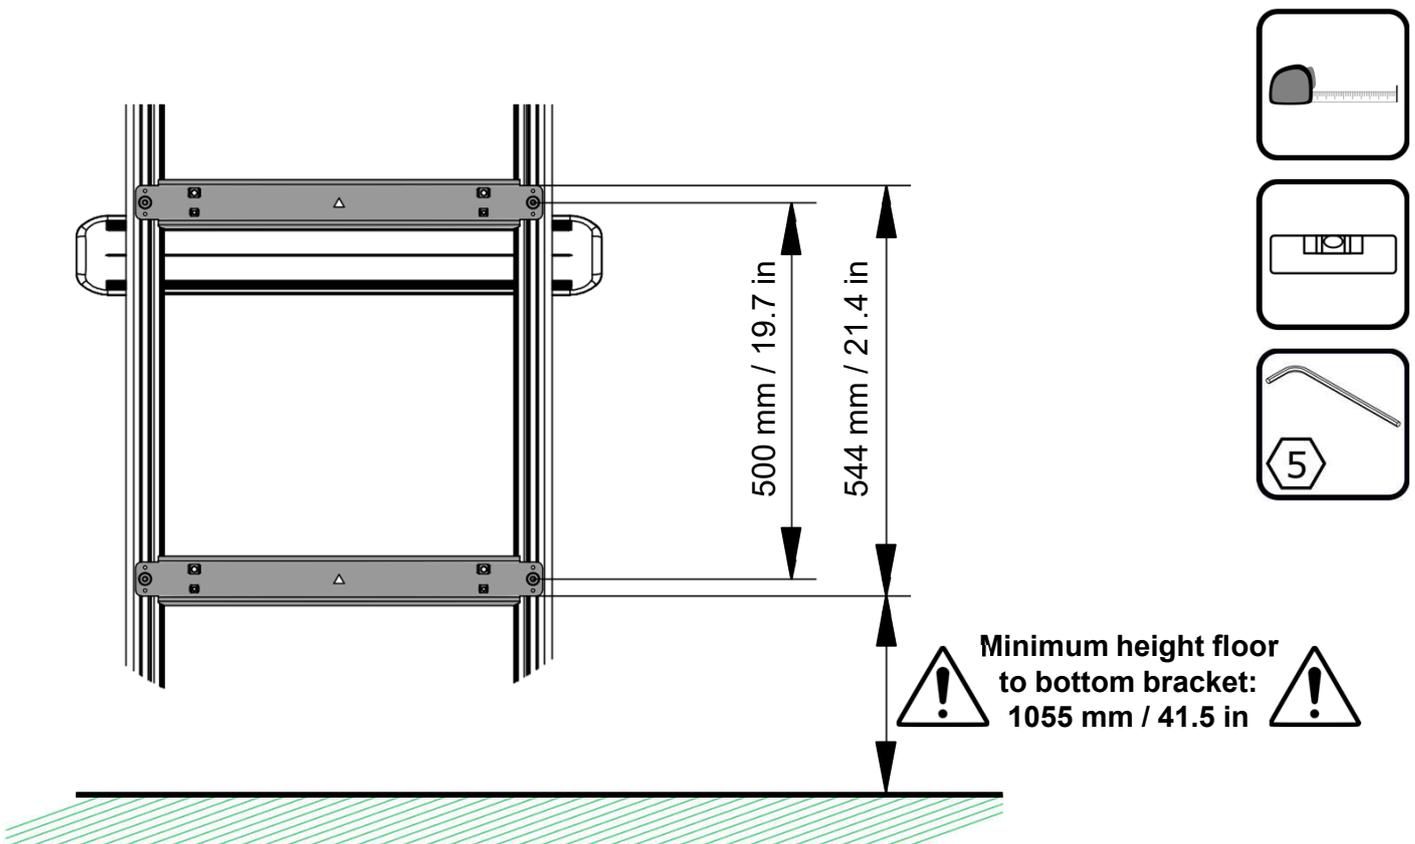

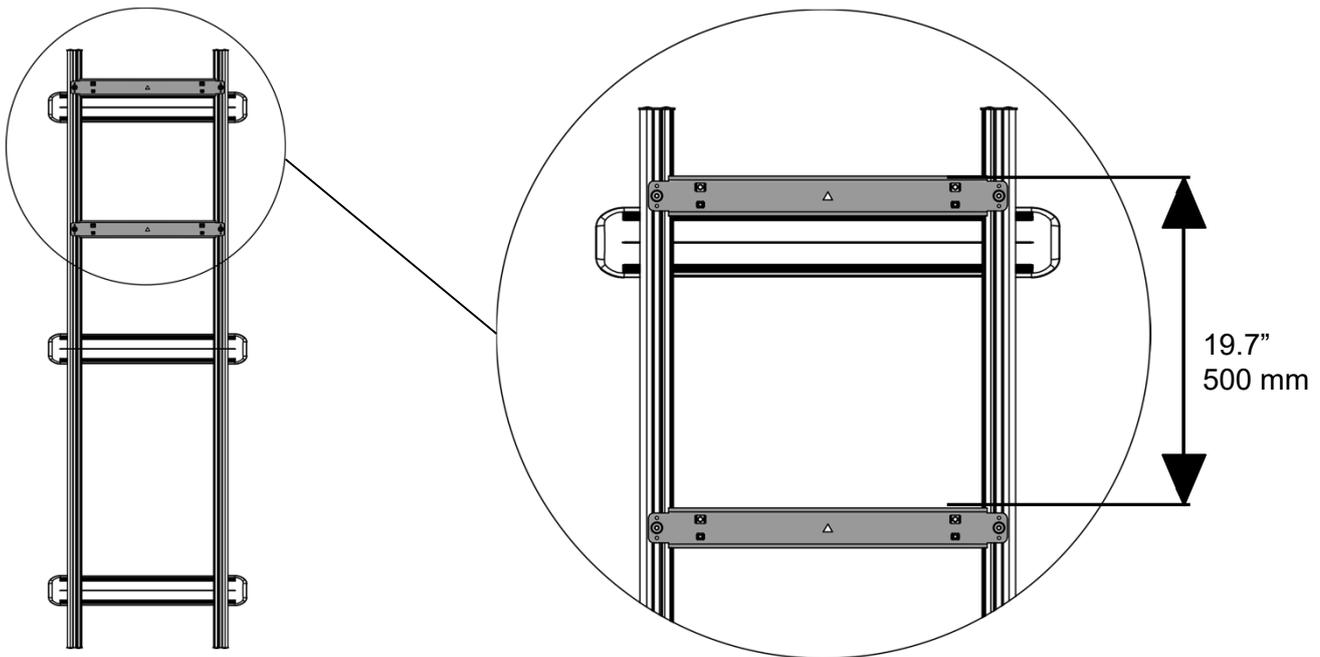

14 Mount 3x cover [R] over each wall bracket [M]

BalanceBox® 400 Floor Support

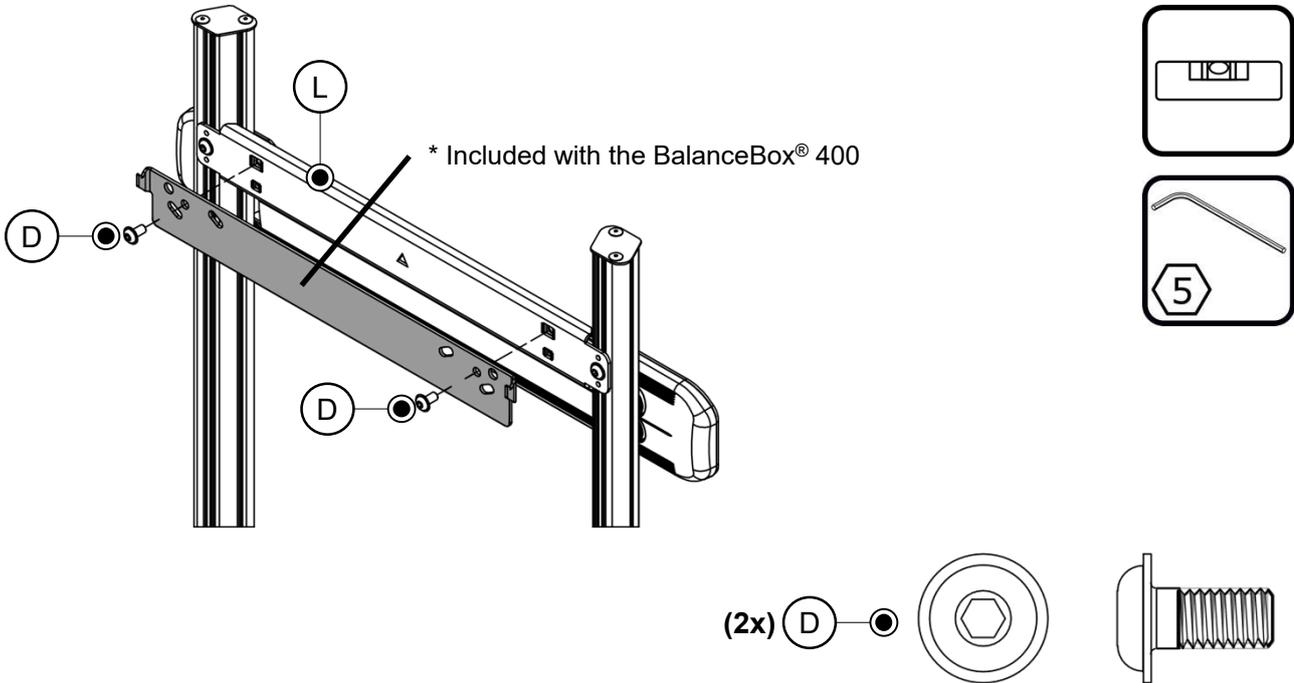

Define how high the BalanceBox® 400 needs to be. Refer to the mounting template provided with the BalanceBox® 400 and determine the mounting height. The two interface brackets need to be mounted 500 mm / 19.7" from each other. If needed reposition the interface brackets. Loosen the nuts in order to adjust the height of the interface brackets. After adjusting, level the interface brackets and tighten well.

15

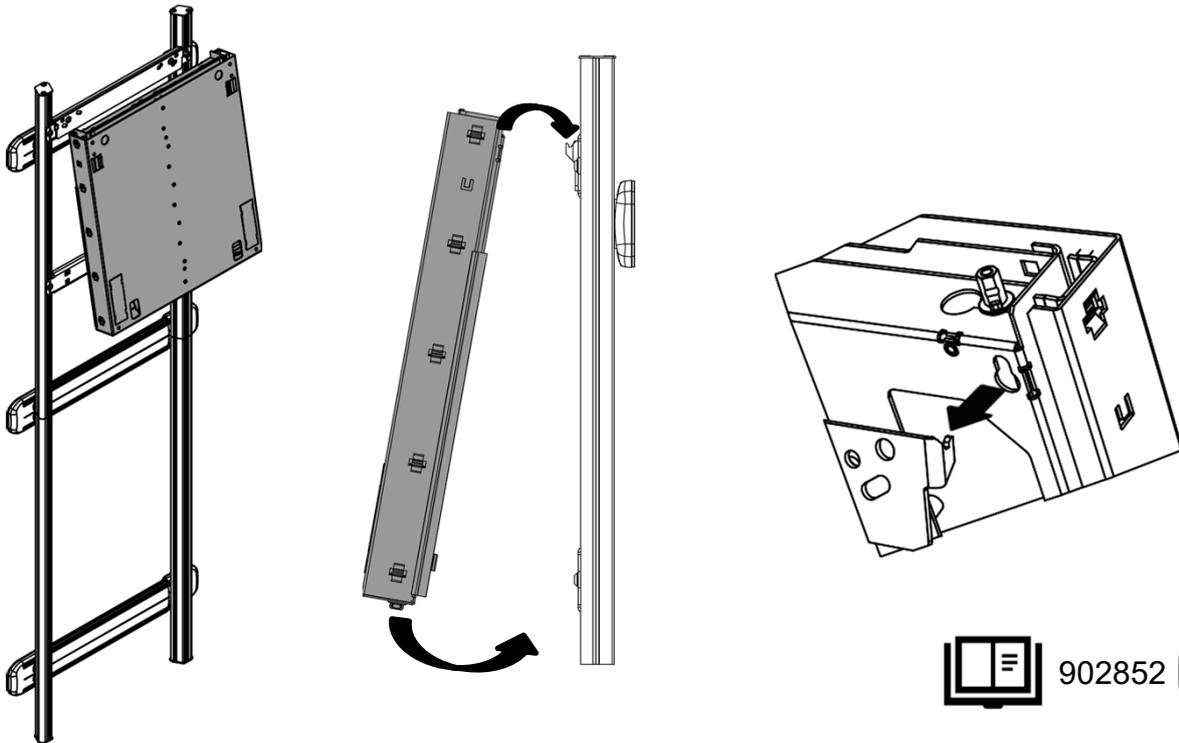

BalanceBox® 400 Floor Support

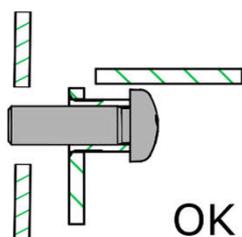

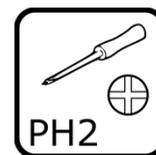

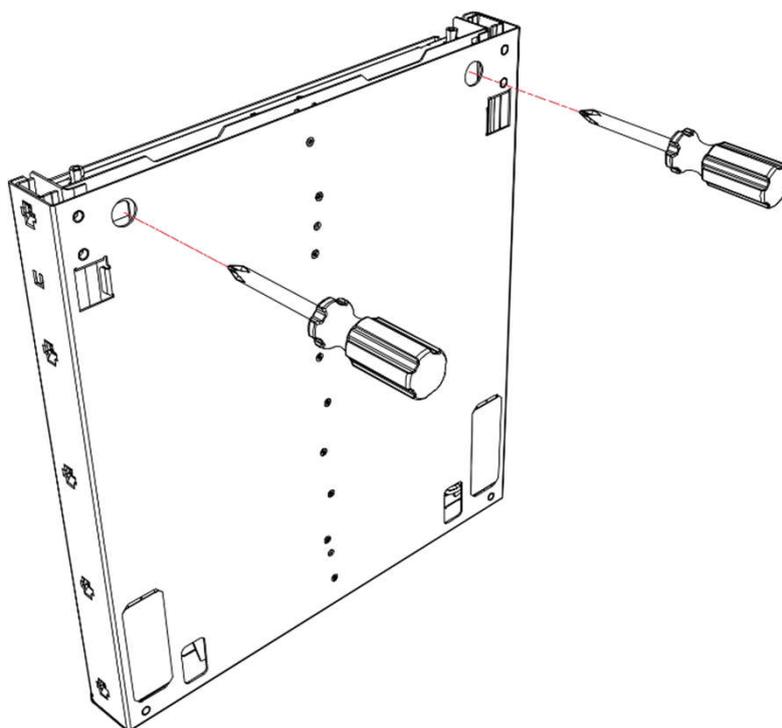

- 16** Mount the bracket of the BalanceBox® 400 on the top interface bracket [L] of the floor support.
Use 2x screw [D], level the bracket and tighten well.

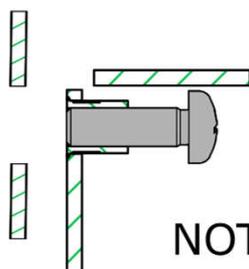

- 17** Make sure the cover of the BalanceBox® 400 is removed according manual 902852.
Mount the BalanceBox® 400 onto the floor support.

18 Secure the BalanceBox® 400 at the top. 

OK
