

Conveniently Located

River's Edge Millwork & Stone is located in Central Pennsylvania just off of interstate 80. Our location is convenient for shipping throughout the eastern United States and beyond. We complete local projects and ship as far away as California.

Various Customer Types

Our customer-type varies as widely as our service area. We fabricate for banks, hotels, K-12 schools, college and universities, business offices, apartment complexes and more. We build traditional millwork framed counters made from furniture grade plywood, or counters framed using 1.25" square-tube steel and fitted with either stainless steel or millwork interiors. Exterior finishes are limited by the designers imagination. From laminate, stain and urethane, tile, custom formed plastic panels with stand-offs and more, we can build the look you need for any project.

Solid Surface

We run two CNC machines to cut 3cm stone and quartz products. The CNC router cuts, profiles and polishes direct from CAD files. Our CNC 5-axis bridge saw is for fast and accurate straight cuts including mitered edges. Our craftsman fit and hand finish each project to be sure it's correct before leaving our facility.

Electrical

Our UL listing allows us to pre-wire cabinets including lighting, outlets and load centers. Pre-wiring during production saves coordination time and money during construction.

Sanitation

We are an NSF certified fabricator, a certification needed for foodservice applications. If your cabinets are for serving food, they need to carry the NSF certification.

A division of Commercial Stainless, Inc.

River's Edge is *the complete* custom millwork fabricator. With millwork, solid surface including 3cm stone and metal working all under one roof, we simplify your project approvals and field coordination making your job easier. Through years of employee experience, the latest technology in CNC machines and a solid work ethic, we create millwork and customers that last for years.

Quality Made Millwork & Stone Tops

The Complete Custom Fabricator

We make your job easier.

To best serve our customers, we keep coordination of your entire project under one roof. Our millwork division includes both a solid surface department and metal fabrication. For the most complicated and demanding projects, we build and complete your entire project under one roof. This means less complications and coordination during field installations for you, the customer.

Our solid surface department includes a CNC router that cuts, profiles and polishes directly from a CAD drawing. It also includes a CNC 5-axis bridge saw for fast straight-cut production or to create 45 degree mitered cuts for waterfall-edge applications.

With millwork, solid surface top and metal work production under one roof, it consolidates drawing approvals for you, lessens coordination errors in the field and makes production faster. All this makes your job easier.

Accurate Lead Times

Exact builds demanded by food safety codes, delays to verify wall-to-wall dimensions and strict delivery dates due to a tight and limited construction season make foodservice construction some of the most demanding. And it is the foodservice industry in which we made our name.

We know what it takes for you to succeed. We pride ourselves on giving you honest project delivery dates even if that means we do not get the order. We want your business long-term, not just today. And to do that, being honest with delivery dates up front is one of the most important things we can do for you. When we state a delivery date, we mean it.

Professional Listings

All custom fabricated millwork is UL listed and NSF certified.

NSF, the National Sanitation Foundation is an important certification for foodservice applications.

UL listing is important for pre-wired counters and factory installed load centers.

Drafting

Our drafting department will provide drawings for approval prior to construction. This allows you and your customer to be sure you are getting exactly what you want and need.

It's A Partnership Thing

We are partners with our customers, not just suppliers. And we want you to feel the same about us. The best experiences are when suppliers and customers understand what each other need when they need it. Having a personal connection helps create the best product and experience.

In addition to honest lead times, providing a quality product and reacting quickly to problems, we also provide internal project managers for each of your projects. They are the single point of contact to see your project through to completion and shipping. Get to know your project manager, create a partnership today.

Capabilities
Custom Fabrication
• Millwork
• Solid Surface
• Stainless Steel
Installation

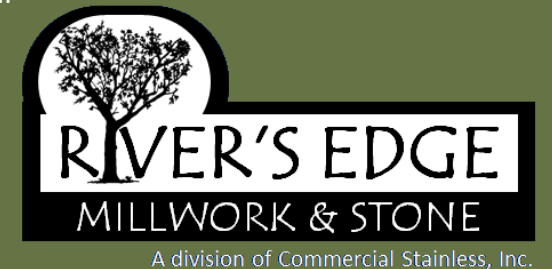

Experience
Established 1989
