Structura de bar este scheletul care conferă forma și integritatea barului, asigurând și îmbinarea uniformă între zona de lucru din spatele barului și zona de design / arhitectura percepută de client. Ea a fost creată respectând standardele și normele internaționale în domeniu.

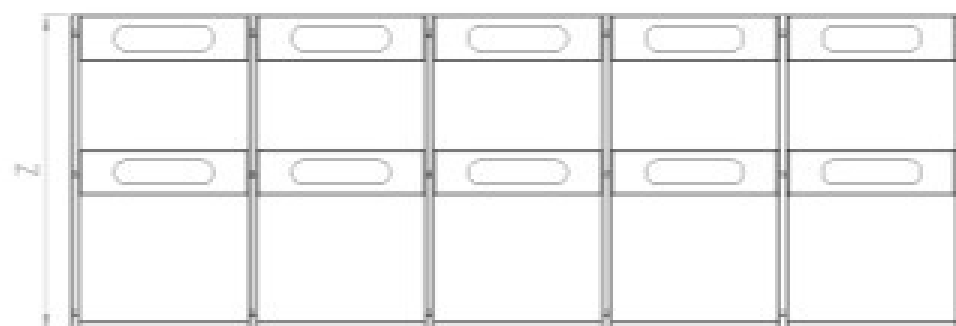

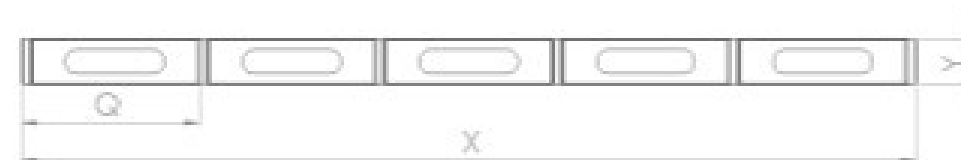

Avantajele structurii de bar:

- Zona tehnică prin interiorul structurii ce permite trecerea părții electrice, alimentare și scurgere apă, etc.
- Modularitate – fiind gândită pe segmente, se pot face pe orice lungime, ulterior putând fi modificată după dorință.
- Rezistentă – această structură nu are nevoie de alte console sau elemente de susținere care pot încurca utilizarea zonei interioare a barului.
- Montare ușoară – fiind gândită să se intervină cât mai puțin la locație, această structură se montează foarte ușor, neavând nevoie de sudură, vopsire, unelte speciale. Montarea se poate face chiar și dacă restaurantul/barul își desfășoară deja activitatea.
